LEWIS CAMPBELL

ON THE THIRTIETH ANNIVERSARY OF HIS 'INTRODUCTION TO THE SOPHISTES AND POLITICUS'

THIS WORK IS DEDICATED

IN GRATEFUL REMEMBRANCE

OF TRUE FRIENDSHIP AND KINDNESS

PREFACE

In undertaking the investigations summarised in this volume, the author's chief aim was to explain the origin of Logic by a psychological study of the first logician. This required a knowledge of the chronology of Plato's writings, not supplied by our historical tradition nor by the extant Platonic investigations. English and French scholars mostly believed this problem to be insoluble; the prevalent opinion in Germany, represented by the successive editions of Zeller's and Ueberweg's handbooks on Greek philosophy, was plainly wrong. Under these circumstances there was need of a new method in order to attain a greater certainty as to the order in which Plato wrote his dialogues. The method here proposed improves the stylistic tests used heretofore by formulating the theoretical principles on which a new science of Stylometry should be based (pp. 145-161) and by applying these principles (pp. 162-193) to five hundred peculiarities of Plato's style (observed in fifty-eight thousand cases) collected in the course of fifty years by some twenty authors working independently (pp. 74-139). This stylometric method, supplemented by many comparisons of the contents of Plato's works (for instance, pp. 329, 333, 366, 368, 372, 396, 430, 452, &c.), and by such observations and suggestions as were found available in the Platonic literature of all countries, led the author to determine the chronological order of about twenty among the most important of the Platonic dialogues.

On this basis an account of Plato's logical theories and of their development is given here for the first time. It is ascertained that the theory of ideas, generally believed to be the unique form of Plato's logic, was only a first attempt of the philosopher to settle the difficulties of the relation between Knowledge and Being; and that, when past fifty, he produced a new logical system, in which he anticipated some conceptions of modern philosophy, arriving at the recognition of the substantial existence of the individual soul and substituting a classification of human notions for the intuition of divine ideas.

This being a work of research, not a general handbook, the reader need not expect a digest of literature. The authors chiefly quoted are those who were the first to make an important observation, or who have expressed more amply the author's own views on some subject briefly treated here, or whose remarkable want of judgment makes them instructive as examples to avoid. A full indication of the bibliography on any special question has nowhere been attempted except in Chapter III on Plato's However, it has been sought to demonstrate the merits of some writers as yet insufficiently appreciated (for instance, pp. 83, 112, 352). As a Pole, the author may possibly be more impartial than the representatives of other nations more active in Platonic research. The works of British scholars are little known in Germany, and, on the other hand, many special German investigations are overlooked in France and Great Britain. Here the results obtained through unconscious international collaboration have been summed up and presented in a general outline, though without bibliographical completeness. The absence of alphabetical indices in the majority of works on Plato makes it hard to remember by whom a given observation was first made. These historical debts have been acknowledged in many instances, and wherever such an acknowledgment is missing, this should be attributed to defective memory.

The peculiar method of research used in the present work is a result of the author's previous study of natural sciences and mathematics (1881–1885), and he feels much indebted to his teachers at the late German University of Dorpat¹: Carl Schmidt, Arthur von Oettingen, Johannes Lemberg, Gustav Bunge, Wilhelm Ostwald, Andreas Lindstedt, and Jan Baudouin de Courtenay, all of whom in their lectures and also in private intercourse with their pupils insisted on exactness of method in scientific investigation. His interest in Plato the author owes to Gustav Teichmüller,² from whom however he now differs somewhat in his views on the method of Platonic research and on Plato's philosophy (pp. 57–59, 102–103).

¹ To acknowledge this debt of gratitude is all the more a duty, as since the change of this German seat of learning into the Russian University of Jurjew all its most eminent professors have been obliged to resign, and Dorpat University is now but a historical reminiscence, dear to all its ancient pupils.

² Under Teichmüller's influence the author wrote ten years ago his first work on Plato: Erhaltung und Untergang der Staatsverfassungen, nach Plato, Aristoteles und Machiavelli, Dorpat 1887 (Breslau 1888), wherein Plato's views on political revolutions are shown to be the source of later theories on that subject. The chief contents of Chapter I of the present work have been more amply treated in the author's Polish publications: O Logice Platona, Part I, Kraków 1891 and Part II, Warezawa 1892, condensed in the French Bulletin de l'Académie des sciences de Cracovie, April 1890 and November 1891. Also Chapters V, VII and VIII rest chiefly on a Polish work of the author: O pierwssych treech tetralogiach dsiet Platona, published by the Académie des sciences de Cracovie, Cracow 1896; condensed in the same Bulletin for October, November 1895, and in the Archiv für Geschichte der Philosophie, vol. ix. pp. 67-114, October 1895.

X ORIGIN AND GROWTH OF PLATO'S LOGIC

The author feels deeply obliged to all who have helped him, and in the conviction that the collaboration of many is needed to bring full light to bear upon the difficult problems dealt with in this volume, he ventures to invite his readers also to assist him in his further studies on Plato by pointing out such errors or even formal deficiencies, however minute, as may be observed (address, care of Longmans, Green, and Co., 39 Paternoster Row, London).

La Coruña, Spain:
October 1897.

CONTENTS

CHAPTER I

PLATO AS A LOGICIAN (pp. 1-34)

Progress of logic questioned, p. 1-Mill against Plato and Kant, 2-Universality and permanence of knowledge to be tested by history of logic, 2— Plato the first logician, 3—Exceptional preservation of his works, 3—Its reasons, 4-Permanence of the Academy, 5-Protection by the Christian clergy, 6-Plato's logic unknown, 7-Opinion of Plethon, 8-of Gennadios, 8-Champier, 9-Patrizi and other historians of the XVIth century, 10-Morainvillier, 11-Stanley and Gassendi, 12-Reaction against Plato in the XVIIth century, 13-Tennemann, 13-He did not attempt to represent the evolution of Plato's logic, 14-Various opinions on Platonic ideas, 15-Van Heusde and other writers in the XIXth century, 16-Recent logical writers, 17-They were ignorant of Platonic chronology, 18—Susemihl first combined both problems, 19—Ueberweg first recognised the difference between Plato's earlier and later logic. 20-Misunderstood by Oldenberg, 21-Confirmed by Peipers, 22-Jackson, 23-Benn, 23-Aristotle still held by some historians to be the first logician, 23-Many useless dissertations on Plato's dialectic, 24-and theory of ideas, 25-Conditions of a better study of Plato's logic, 27-Zeller objects to the representation of Plato's logic, 28—Our aim is to learn about Plato's logic more than he expressed himself in his works, 29-To explain his psychological evolution, 30-To know him better than he could know himself, 31-To find out how he progressed in his views, 33-and what was the last stage of his thoughts, 34

CHAPTER II

AUTHENTICITY AND CHRONOLOGY OF PLATO'S WRITINGS (pp. 35-63)

Order of dialogues proposed by Patrizi, like that of Serranus, of no importance, 35—First inquiry by Tennemann, 35—Schleiermacher agrees with Tennemann on important points, 36—He left uncertain the order of small dialogues, 37—He supposed that Plato had planned from the

beginning the whole of his literary activity, 37-Difference between early Socratic criticism and the later Platonic criticism, 37-Progress from ethics to metaphysics, from polemical to didactic tone, 38—Ast denies the authenticity of all Socratic small dialogues, 38-Socher recognises a gradual evolution of Plato, 39—but proclaims the dialectical dialogues as spurious, 39-Stallbaum in favour of a late date of the Phaedrus, 39-H. Ritter, 40-Hermann establishes a Socratic period from which such important works as Parmenides must be excluded, 40 -In many particulars Hermann agrees with Stallbaum and Schleiermacher, 41-All these authors are wrong as to the supposed early date of the dialectical dialogues, 42—First origin of the myth of a Megaric period, 42—Erroneous identification of the presumed date of a conversation and the date of the composition of a dialogue, 43—Based on equally wrong identification of the Platonic and the historic Socrates. 43— Residence of Plato in Megara based on no valid testimony, 43 - but on an isolated opinion of an unknown and evidently ignorant witness, 43-There was no danger for Plato to remain in Athens, 44—The author of the Crito was not a coward, 44—Cicero trustworthy as to Plato's life, quotes Egypt as the first place whereto Plato travelled after Socrates' death, 45-Schleiermacher speaks of Plato's 'flight' without quoting authorities, 45-Ast increases the duration of the supposed sojourn at Megara, 46-Influence of Euclides on Plato taken for granted by Stallbaum, 46-This myth repeated by Ritter and Hermann, 47-Its acceptance a consequence of the same esthetical prejudice which reigned in the method of editing Plato's text before the Zurich edition, 47-Ingenious hypothesis preferred to careful weighing of the evidence, 48—A change in the beautiful theory of ideas esthetically objectionable, 48-Every historian built on some wrong leading hypothesis, 49-We must get rid of such prejudice and learn to measure probabilities, 49—Plato's philosophical consistency more probable than his cowardice, 49—Hermann recognised that Hermodorus' testimony deserved no confidence, 49-and distrusted it as to the date of Plato's first journey, 50-Followers of Hermann and Schleiermacher, 50-Suckow, in a work full of errors, first recognised an important truth: the late date of the dialectical dialogues. 51—He was followed by Munk, 52—True genetic method first applied by Susemihl, 52-who recognised the near relation between Phaedrus and Theaetetus, 53-Ueberweg the first logician who investigated the problem of Platonic chronology, 54—and gave strong reasons for the late date of the dialectical dialogues, 55-but he came to doubt the authenticity of the Parmenides, 55-In this scepticism he was followed by Schaarschmidt, 56—while Grote and Chaignet defended the authenticity of all the dialogues, 56-Jowett, 56-Philosophers begin after Ueberweg to investigate his problem, 57-Tocco defended the authenticity and late date of the Parmenides and other dialectical dialogues. 57—Teichmüller exaggerated the polemical aspect of Plato's works, 57 but he supported Ueberweg's conclusions as to the late date of the dialectical dialogues, 58-This confirmed by Peipers, who convinced Susemihl, 59—but Zeller and the editor of Ueberweg's 'History of Philosophy' maintain the old mythus of the Megaric period, 59-and

are therein followed by other popular writers, 60—New arguments in favour of the late date of the dialectical dialogues, collected by Bergk, Rohde, Christ, Siebeck, remain little known, 60—Dümmler confirms Ueberweg's finding by new applications of Teichmüller's method, 61—Anarchy in Platonic literature, 61—Not removed by the efforts of the French Académie des sciences morales, 61—which crowned a work in which the chronological problem is regarded as insoluble, 62—This is contradicted by the whole progress of these studies, 62—to which the comparison of the logical contents will add new conclusions, 63

CHAPTER III

THE STYLE OF PLATO (pp. 64-193)

Style as a mark of identity of a writer, 64—What Plato thought of it, 65—Modern science deals with problems beyond the reach of Plato, 65—Identification of handwriting, 66, not easier than that of style, 66—Peculiarities of vocabulary, 67—Kinds of words, 68—Their frequency, 69—Arrangement of words, 70—Other stylistic marks, 71—Stylistic investigations easy and useful, 72—A new Lexicon Platonicum and a full bibliography of Platonic literature needed, 73

REVIEW OF FORTY-FIVE PUBLICATIONS ON THE STYLE OF PLATO AND LIST OF 500 PECULIARITIES OF PLATO'S STYLE (pp. 74-189)

Engelhardt, 74-Peculiarities 1-5 (anacoluthiae), 76-Kayssler, Braun, Lange, 77-Kopetsch: Peculiarities 6-11 (adjj. in ros), 78-79-Schöne. 79—Martinius, 81—Campbell, 82—Remained unknown for twenty-eight years, 84-Peculiarity 12, 85-Peculiarities 13-20, 86-87-Peculiarities 21-22, 88-Originality of Plato's vocabulary, 89-Affinities with the latest group, 90—First table of stylistic affinity, 92—Peculiarity 23, 93—Peculiarities of later vocabulary 24-181, 94-97—Classification of these peculiarities, 98-Riddell, 99-Peculiarity 182, 100-Schanz, Lingenberg, Imme, 100-Blass, Roeper, 101-Peculiarity 183, 101-Peculiarities 184-198, 102-Teichmüller, 102-Dittenberger, peculiarity 199, 103-Peculiarities 200-206, 104-Jecht, 105-Peculiarities 207_222, 106_107—Frederking, Hoefer, 107—Peculiarities 223_235, 107_ 109—Peipers, 109—Peculiarities 236-249, 109-110—Weber, peculiarities 250_253, 111-Droste, 111-Newly invented adjectives in ειδής and ώδηs, 112—Their distribution, 113-114—Peculiarities 254-278, 115-117 -Kugler, 117-Peculiarities 279-308, 118-120-Schanz, peculiarities 309-311, 120-Gompers, 120-C. Ritter, 121-Peculiarities 312-355, 122-124-Walbe, peculiarities 356-375, 125-126-Siebeck, 126-Peculiarities 376-378, 127-128-Tiemann, peculiarities 379-388, 128-129-Lina, 129—Peculiarities 389-447, 130-133—Baron, van Cleef, 133— Grunwald, Bertram, 134-Campbell, 135-von Arnim, 136-Peculiarities 448-457, 137-138-Campbell, peculiarities 458-500, 138-139

THEORY OF STYLOMETRY (pp. 140-198)

Limitations of the list of peculiarities, 140—Wrong units of measuring Plato's text, 141—Insufficient number of observations heretofore used. 142—Only equal samples of text comparable, 143—Different importance of observations should be accounted for, 143-Accidental peculiarities neglected, 144—Artificial classification of observations, 144—Importance of method, 145—Scarcity of Platonic idioms in spurious dialogues. 145 Classification of peculiarities, 146-151-Law of stylistic affinity, 152 -Means of testing its validity, 153-Test comparisons, 154-160-Applications. Phaedrus later than Phaedo, 161-Table of stylistic affinity, 162-183-Style of Apology, 162-Of Euthyphro and Crito, 163 -Of Charmides and Laches, 164-Of Protagoras, 165-Of Meno and Euthydemus, 166-Of Gorgias, 167-Of Republic, 168-Of Cratylus, 168-Of Symposium, 169-Of Phaedo, 170-Of Rep. B. i., 171-Of Rep. B. ii.-iv., 172-173-Of Rep. B. v.-vii., 174-Of Rep. B. viii.-ix., 175-Of Rep. B. x., 176-Of Phaedrus, 176-Of Theaetetus and Parmenides. 177-Of Sophist, 178-179-Of Politicus, 180-Of Philebus and Timaeus. 181-Of Critias and the Laws, 182-Explanation of the table of affinity. 183-Influence of the size of a dialogue on the number of peculiarities found in it, 184—Single observations inconclusive, 184—Only equal amounts of text comparable, 185-Revisions do not alter stylistic affinities, 185-Early date of Rep. B. i., 186-Late date of dialectical dialogues, 187-Importance of relative affinity, 187-Latest group of dialogues, 188-Middle group, 189-Cratylus, Symposium, Phaedo earlier than Republic, Phaedrus, and Theaetetus, 189-Gorgias later than all Socratic dialogues, 189-Certainty of these conclusions, 190-Change of the traditional conception of Platonism implied, 190-Aims of further investigation, 191-Future of stylometry, 192-Superiority of a consistent theory over knowledge based on evidence, 193

CHAPTER IV

SOCRATIC STAGE OF PLATO'S LOGIC (pp. 194-218)

Small dialogues, 194—Socratic stage in Plato's philosophy, 195—Sixth tetralogy forms a natural group, 195—Predominance of ethical inquiry, 196—First Alcibiades spurious, 197—Euthyphro authentic, 198—Use of induction, 199—Activity and quality, 200—Date of the Euthyphro, 200—Of the Apology, 201—Logic of the Crito, 201—Its date, 202—Syllogisms in the Charmides, 203—Division of sciences, 203—Usefulness of knowledge, 204—Classification of activities, 204—Date of Charmides and Laches, 204—Truth eternal, 205—Logic of the Protagoras, 205—Inconvertibility of general affirmative judgments, 205—Value of discussion, 206—Principle of contradictories, 206—Date of the Protagoras, 206—Logic of the Meno, 207—Logical exercise recommended, 207—Rules of method, 208—Hypothetical argument, 208—Particular and general affirmations, 208—Innate ideas and unity of nature, 209—Metaphysical certainty, 209—Knowledge and opinion, 209—Date of the Meno, 210—Logic of the Euthydemus, 210—Error and wrong belief, 211—Date of

the Euthydemus, 211—Relation to Isocrates, 212—The Gorgias closes the Socratic stage, 212—Personification of philosophy, 213—Belief and knowledge, 213—Pure and applied science, 214—Logical terms, 214—Judgment of statesmen, 214—Date of the Gorgias, 215—Progress made by Plato during the Socratic stage, 216—Influence of educational activity, 216—Solution of the moral problem, 217—Beginning of logical interest, 217—Certainty as a psychological experience, 218

CHAPTER V

ORIGIN OF THE THEORY OF IDEAS (pp. 219-266)

Transition from psychological to logical certainty, 219—Explanation of certainty attempted, 220-I. Cratylus, 220-Starting point of Plato's logic, 221-Moral judgments, 221-Things and words, 221-Relation to Euthydemus, 222-Permanence of substance, 222-Fixity of knowledge, 223-Its objects, 223 -- Use of terms, 224-The dialectician, 225-Origin of error, 226-Consistency of truth, 227-Thought and language, 228-Ideal consistency, 229—Authenticity of the Cratylus, 230—Supposed early date, 231-Date of composition, 232-II. Symposium, 233-Platonic love, 234—Novelty of doctrine, 234—Its relation to previous development of art, 235-Sudden intuition of eternal beauty, 236-As object of knowledge, 237-Knowledge and opinion, 238-Philosophy and wisdom, 238-Immortality of fame, 239-Renovation of knowledge, 239 -- Date of Symposium, 240-Relation to Phaedo and Phaedrus, 242-To Cratylus, 242—To Meno, 243—To Protagoras, 243—To Gorgias, 243— To Isocrates' Busiris, 244—III. Phaedo, 245—System of ideas, 246— Value of sense perception, 246—Pure thought, 247—Innate notions, 247 -Ideal and material equality, 248-Priority of ideas, 250-Two worlds, 250-Philosopher a God, 250-Usefulness of logic, 251-Scepticism and misanthropy, 251-Final and efficient causes, 252-Thought and existence, 253-Highest hypothesis, 253-Idea and particulars, 254-Terminology, 255-Ascending hypothetical progress, 256-Importance of method, 256-Warning against circular reasoning, 257-Intuition of ideas, 257—Law of contradiction, 258—Stability of ideas, 258— Authenticity of the Phaedo, 259-Immortality, 260-Physical theories, 261-Relation to the Symposium, 261-To the Apology, 263-to the Cratylus, 264-Date, 265-6

CHAPTER VI

MIDDLE PLATONISM (pp. 267-362)

Practical application of philosophy in politics and education, 267—I. The Republic, 268—Time necessary for its composition, 269—Speed of writing, 270—Concluded at the age of fifty, 271—Division in parts, 271—Book I. similar to Gorgias, 272—Not a small dialogue, 273—closely related to the following books, 274—But earlier than the Phaedo, 275—Later than Gorgias, 276—Books II.—IV. represent the primitive state, 276—Threefold partition of the soul, 277—Based on law of contradic tion, 277—Provisionally accepted, 278—The imperfection of method

acknowledged, 279-Allusions to the theory of ideas, 280-Analogy between individual and state, 281-Relation to the Phaedo, 282-Traces of oral teaching, 282-Increased interest in logic, 283-Method of exclusion, 283—Hegemony of justice, 284—Conception of a self-sufficient aim, 285—Relation to Cratylus and Meno, 285—To Symposium, 286 and Phaedo, 287—To Laches, 288—Pretended relation to Aristophanes. 288—Contradicted by Aristotle and Plato, 289—Date of Books II.-IV., 289-Books V.-VII. a natural part, 290-Even if added later belong to the plan of the whole, 291-Theory of ideas, 291-Terminology, 292-293 -Intuition of the good, 294-Metaphors explained, 295-Philosophical training, 296—Philosopher opposed to the mere practical man, 297— Idea of Good, 298—Initiation through mathematical study, 298—Units and figures, 299-Solid geometry, 300-Nature of theoretical knowledge, 300-Contempt for observations, 301-Probabilities neglected, 301-Science limited to truth, 301-Dialectic based on absolute principles, 302—System of human knowledge, 303—Final cause of universe, 303— Allegory of the cave, 304—Use of hypotheses in mathematics, 305—Distinction between διάνοια and ἐπιστήμη irrelevant, 305—as that between είκασία and πίστις, 306-Object of opinion defined, 307-Accident and substance, 307—Thought independent of the body, 307—Not-Being, 308 -Relation to the Phaedo, 308-Traces of teaching activity, 309-Relation to Symposium, 310-Books VIII.-IX.: happiness of the philosopher, 311—True opinion and science, 312-Book X.: ideas of manufactured things, 313—Unity of each idea, 313—Immortality, 314—Truth found in thought, 315-Unity of consciousness, 315-Method of revision, 315—Relation to the Phaedo, 316—Opinion and knowledge, 317—Law of contradiction, 318-Contempt of poets, 318

Style and date of the Republic. Early style of Book I., 319—Earlier than Cratylus, 321—Ali other books later than Phaedo, 322—Books V.—VII. probably later than Book IX., 323—The Republic composed in about six years, 325

II. Phaedrus on rhetoric, 326—Speech of Lysias authentic, 327—Use of examples, 328—Widened horizon, 329—Spirit of conciliation, 330—Contempt of poets and tyrants, 331—Belation to Symposium, 331—Dialecticians, 332—Proof of immortality, 332—Compared with that of the Republic, 334—Later than Phaedo, 334—Compared with the Laws, 335—Partition of the soul, 336—Classification of men, 337—Authority of the philosopher, 338—Metaphorical representation of ideas, 339—Thei relation to particulars, 340—Analysis and synthesis, 341—Teaching and rhetoric, 342—Programme of a future art, 344—Plato's and Aristotle's view of writing, 345—Invitation to the Academy, 346—Recognition of Isocrates and others, 347—Thompson and Teichmüller on the Panegyricus, 348—Date of the Phaedrus, 348—Arguments in favour of an early date, 349—Thompson unknown, 352—Relation of the Phaedrus to the Phaedo, 353—To the Symposium, 354—To the Republic, 355—To the Cratylus and Gorgias, 356—Style of the Phaedrus, 357

Middle Platonism, 858—Lasted up to Plato's fiftieth year, 858— Transformation of the theory of ideas, 359—Objective idealism, 860— Plato compared with Kant, 361

CHAPTER VII

REFORM OF PLATO'S LOGIC (pp. 869-415)

- Ideas independent of particulars, 363—Problem of the order of ideas, 364—General classification, 364—Theaetetus and Parmenides as critical dialogues, 365—Qualitative change a kind of movement, 365—This distinction unknown in Republic and Phaedrus, 366—Its fundamental importance, 367—Highest kinds or categories, 368—Progress from intuition to discursive investigation, 369—Influence of physical studies, 370.
 - I. Theaetetus, 371—Earlier definitions of knowledge, 371—Unity of consciousness, 372—Specific energy of the senses, 372—Senses instruments of the soul, 373-Common predicates of different perceptions, 373 -Immediate activity of the soul, 374-Illusions of the senses, 374-Refutation of materialism, 375—Knowledge expressed in judgments, 375 Affirmation and negation, 376-Unity of judgment, 376-Different meanings of Abyos, 377—Definitions not peculiar to knowledge, 378— Heraclitus refuted, 378-Training of philosophers, 379-Widened horizon, 380-Impartiality of research, 381-Rhetoric and philosophy, 381—Ideas and categories, 382—Example of antinomies, 382—Axioms in the soul, 383—Activity and passivity, 384—Conditions of error, 384— Difference between earlier and later inconclusiveness, 384-Date of the Theaetetus, 385-Zeller's arguments in favour of an early date, 386-Corinthian war, 386-Peltasts, 387-List of twenty-five ancestors, 388 -Relation to the Republic, 389-To the Symposium, 389-To Antisthenes and Euclides, 390—To later dialogues, 390—Allusions to Plato's school, 391-To his travels, 392-Dramatic form, 392-Twelve kinds of dialogue, 393-Theaetetus later than Republic, 395-Than the Phaedrus, 397—Probably later than 367 B.C., 398—Stylistic confirmation, 399
 - 1I. ORIGIN AND GROWTH

OF

PLATO'S LOGIC

CHAPTER I

PLATO AS A LOGICIAN

WHILE the amount of scientific knowledge, as distinguished from mere opinion and prejudice, constantly increases, there is not such progress in its quality, or in the degree of certainty attained, as to make knowledge This certainty, being not undeniable and infallible. inherent in reasoning, but dependent upon the logical perfection of our investigations, can be increased only through the development of logical method. see that the highest truths of natural science are questioned, and not even the law of gravitation is Kant said in the introduction to his held sacred. Kritik der reinen Vernunft that the logical rules formulated by Aristotle have the rare privilege of being a permanent and unchangeable scientific acquisition. we have since witnessed vehement attacks on the Aristotelian theory of syllogism, and to some logicians of our century even our oldest logical principles seem to be uncertain.

After two thousand years of philosophical speculation, based on concepts of pure reason, came Mill, with his belief that general notions could be built up, by some mental process unknown to Kant and to Plato, out of particular sensible experiences. And Mill is reputed in his own country and elsewhere to be a great logician. He stands not alone: his predecessors range from Democritos and Protagoras downwards, and his adherents are numerous. If not even our mathematical notions are acknowledged to be independent of sensation, then every advance in mental philosophy might be questioned, and the crowd of ignorant $\beta \acute{a}vav\sigma o\iota$ would exult in proclaiming the uselessness of philosophy.

History of logic: instrumental to logic.

In these discussions on the foundations of human knowledge, small use has been made of historical investigation concerning the origin of prevailing logical theories. Still, it cannot be denied that such inquiries form an essential part of logical science itself. If there is something like truly universal and permanent knowledge, it must have had this character from the beginning, and to show its beginning is to explain its permanence. If, on the other hand, all our knowledge be mere personal opinion, and if it be impossible for man to attain fixed and certain knowledge, if every truth pretending to be scientifically proven hold good only till it be replaced by a better truth, then we can convince ourselves of the provisional condition of our certitude by no better means than by discovering such changes in the fundamental principles of science, in the theory of science itself, which we call logic.

Plate the first logician.

The origin of logic has been largely discussed. Old-fashioned historians thought that logic was as old as mankind, and wrote on the logic of Adam or of Pro-

¹ It was a general custom in early times to begin the history of every science with the creation of man. See, for instance, Jacob Friedrich Reimmann, Versuch einer Einleitung in die Historiam literariam antediluvianam, Halle 1709, wherein the author quotes in a humorous way such historians of logic. Much later Antonio Genovesi said in his widely read Logic (Antonii Genuensis artis logicocriticae libri V., editio iv., Neapoli 1758), p. 7: 'Ego non negaverim, quin, cum Ada magna sapientia a Deo

metheus.2 But, leaving aside such conceits, the oldest accessible documents for the history of logic are the works of Plato. In such difficult matters second-hand testimony is worthless, and of philosophers earlier than Plato we have only fragments. These fragments—preserved by Plato, Aristotle, and later writers as casual quotations—may give rise to conjectures and discussions; they never afford a clear and full representation of their authors. We can only infer from them that all philosophers before Socrates were more interested in the nature of Being than in the conditions of Knowledge. They used their reason and imagination without making reason itself an object of reasoning.

The first man whom we meet in the history of human thought as a logician, or at least the first logician whose writings have reached us in a form as complete as they were known by his contemporaries, is Plato.

The complete preservation of his works is amazing, if Excepwe consider that no other Attic writer is so well known tional preto us by his own writings. Of one hundred and thirty works by Sophocles seven survive; of ninety-two by Euripides we have but nineteen. Of forty-four comedies by Aristophanes only eleven are preserved; and the comic author who succeeded Aristophanes in Plato's time, Antiphanes, is said to have written two hundred and sixty comedies, of which not one remains. Of the five hundred and twenty-six plays written by these four poets, the most renowned dramatists of Plato's age, we know only thirtyseven-a fourteenth of the whole. When Plato in his

servation of his works.

fuerit ornatus, usu rationis plurimum valuerit, id est, quin egregius fuerit Logicus.'

² The strange hypothesis that Prometheus was the first logician is due to a misinterpretation of p. 16 c of the Philebus, where Plato speaks of 'some Prometheus' who might have brought the light of reason from heaven. Pierre de la Ramée (Petri Rami Scholae in liberales artes, Basileae 1578, p. 312) infers that Prometheus was the first logician according to Plato. He also credits Plato with a great logical importance, remarking (p. 325) 'logica Platonis non tantum 4 dialogis continetur, ut videtur Lacrtius dicere, sed omnibus fere aspergitur.'

Republic proclaimed war against dramatic poets, he could not foresee that his verdict would be so mercilessly enforced by time.

No happier was the fate of the orators, against whom Plato wrote. Lysias was known to him by four hundred and twenty-five speeches, of which but thirty-four remain. Of the sixty works ascribed to his rival Isocrates, twothirds have disappeared. We have to judge of the famous speeches of these two orators by a fractional part (one ninth) of their work.

Philosophers fared no better. Democritos, reputed to have written sixty works, had great influence on his time. His notion of atoms still remains the basis of our conception of matter, and his ethical principles anticipated Christian teaching: but not one of his works is left. Of all the philosophical literature of Plato's time to which he refers, scarcely anything remains. Not even the works of Aristotle have reached us in a shape nearly so complete or so correct as Plato's.

Peculiar for the preservation of Plato's works.

Our most ancient manuscript of Plato is a thousand conditions years old, and might well proceed from some MS. preserved in Plato's Academy. It has been shown³ that the Phaedo of Plato was known to readers two thousand two hundred years ago in copies less correct than our present editions. A papyrus of the third century B.C. containing fragments of the Phaedo embodies evident blunders. unknown to our best manuscripts, and differs in few particulars from the text as read in the nineteenth century.

> The creation by Plato of a philosophic school permanently fixed in one place during centuries 4 explains

4 Up to the year 87 B.C. the Academy was undisturbed. Sulla obliged the Academicians to leave the gardens of Academos, but the Platonic

L. Campbell, 'On the text of the Papyrus fragment of the Phaedo' in the Classical Review, Oct.-Dec. 1891, vol. v. pp. 363-365, 454-457. The detailed analysis of all the readings of the papyrus leads to the conclusion that 'the amount both of incrustation and of decay is extremely small' and that 'the readings of the papyrus are not to be accepted without question.' Cf. H. Usener, 'Unser Platontext,' pp. 25-50, 181-215 in Nachrichten der Königlichen Gesellschaft der Wissenschaften zu Göttingen, 1892.

the preservation of his works in so remarkable a state of correctness and purity. The accidental name of Academy, given to that spot, has been more honoured than that of the Lyceum, where Aristotle gave his lessons. Wilamowitz-Moellendorff's made it seem probable that the school founded by Plato had the character of a religious association, thus possessing a stability greater than any purely scientific institution could attain. Such associations were respected by the Roman conquerors, and lasted till the Christian monasteries gave to Plato's works a refuge not less safe than his own Academy.

In such a monastery, on the isle of Patmos, at the beginning of this century, Clarke found the manuscript now preserved in the Bodleian Library, and written 896 A.D.: one of the most ancient Greek manuscripts in existence.⁶ This continuity of religious protection was a very exceptional circumstance: alone among the authors of the fourth century B.C. Plato has been read continuously for twenty-three centuries. His school, lasting more than nine hundred years, outlived the schools of Aristotle and Epicurus.

It was fortunate, too, that the Academy was still in being, when the great improvement of writing materials occurred in our fourth and fifth centuries. The light papyrus rolls were then copied on stout and lasting parchment:

school continued to exist in Athens up to 529 A.D., when Justinian dissolved the philosophical schools. On Plato's school see Grote's Plato, London 1888, vol. i. p. 265, Zumpt, 'Ueber den Bestand der philosophischen Schulen in Athen' (Abh. der Akad. d. Wiss. su Berlin aus dem J. 1842, Berlin 1844, pp. 27-119), Π. Κωνσταντινίδος, 'Η 'Ακαδήμια ήτοι πραγματεία περὶ τῆς 'Αθήνησι Πλατωνικῆς σχολῆς, ἐν 'Ερλάνγη, 1874, Usener, 'Organisation der wissenschaftlichen Arbeit' (Preussiche Jahrbücher, Band 53, 1884), E. Heitz, 'Die Philosophenschulen zu Athen' (Deutsche Revue, 1884), O. Immisch, 'Die Academie Platons' in Fleckeisens Jahrb. 1894, pp. 421-442.

- ⁵ Wilamowitz-Moellendorff, Philologische Untersuchungen, 1881, Heft iv.
- Gardthausen, Griechische Paldographie, Leipzig 1879, p. 344, gives a list of the oldest dated Greek manuscripts and quotes only one older than the Clarkianus, a MS. of Euclid, also at Oxford.
- ⁷ On this reform see T. Birt, Das antike Buchwesen in seinem Verhältniss sur Litteratur, Berlin 1882.

one parchment volume, including the matter of many papyrus rolls, occupied less space. Such copies are the definite form in which we now possess the oldest texts of Greek writers, while the papyri have preserved for us only tattered fragments.

Plato's works, copied on parchment while his Academy still flourished, survived in a more correct shape than the text of other writers whose works were not continually read in a school lasting over nine centuries. And it is no mere supposition that they were read, because we know that, up to the last scholarch Damascius, many leaders of Plato's Academy spent their lives in writing commentaries on the Master's dialogues. Such commentaries as those of Proclus (411-485 A.D.), head of the Academy eight hundred years after Plato's death, show great care for correctness of text, a religious awe and conviction of the deep meaning of each word. Our oldest manuscripts of Plato (Clarkianus and Parisinus A) were written in Greece, and this increases the probability of their descent from the copies of the Academy, while many other Greek works came to us through Alexandria and Rome. though Plato's writings were often edited in Alexandria and Rome, our oldest manuscripts were written by Greeks for Greek scholars, as is shown by the indications of the copyists.

While other pagan writers were despised by the early Christian clergy, Plato found admirers among the Christian bishops: as, for instance, Eusebius (264–340), St. Augustine (354–430), Theodoretus (390–457), and many others. St. Augustine thought that Plato came nearer to Christianity than any other writer. This means that Christianity was built upon Plato more than upon any other philosopher. The monk who, in the ninth century, copied the works of Plato, knowing that these writings were admired by the greatest authorities of the Church,

^{*} St. Augustine, De Civitate Dei, lib. viii. cap. iv-xi. in the edition of Migne, tom. vii. pp. 227-236.

transcribed with the greatest care, feeling the same veneration for these texts as Plato's own followers in the Academy.

These unique circumstances explain the survival of Plato's text in a state more correct and authentic than that of contemporary poets or orators, and they further explain why not one of the works written by Plato has perished. There is no valid testimony as to the existence of a single work by Plato not contained in our collection.9

Considering these facts, and the varied contents of Plato's Plato's dialogues, we might expect that each part of the logic philosophy of Plato would have been made the subject of neglected. special investigation by all who were interested in the origin of philosophic thought. But, strange to say, Plato's logic remains almost unknown, as may easily be seen from a short survey of the chief opinions expressed on this subject. Such a survey is tedious, but it helps us to establish the proper method of resolving the proposed problem: What was the origin and growth of Plato's logic? This problem, under the peculiar circumstances of the case, becomes identical with the apparently more important problem of the origin of logic generally, and the origin of scientific certitude as opposed to unscientific and transitory opinions.

Early Platonists up to the fourteenth century are of little importance for our purpose, because their writings are very insufficiently preserved and we could not easily obtain a clear idea of the progress, if any, made by them in the study of the Platonic writings. Our present scientific tradition begins with the fifteenth century and the revival of classical studies in Italy, so that it suffices to learn what has since been done for the knowledge of Plato's logic.

The first champion in modern times of the general im-

On the completeness of Plato's works see Zeller, Philosophie der Griechen, 4° Aufl., II Theil, 1 Abth. Leipzig 1889, pp. 436-440.

Platonists and Aristotelians of the xv.-xvi. centuries. portance of Plato's logic was Georgios Gemistos, 10 named also Plethon, who came in 1438 from Greece to Italy to take part in the Council of Ferrara. He wrote a pamphlet 11 on the difference between Plato and Aristotle, wherein he insists on the logical merits of Plato, against Aristotle's assertion at the end of his Organon (183 b 34) that he was the first to find a method of reasoning (μέθοδος τῶν λόγων, De Sophisticis Elenchis, cap. xxxiv. 6, 183 b 13; cf. Plato, Sophist 227 A, Politicus 266 D, &c.). Plethon accuses Aristotle of acting in this particular like a sophist and in a way unworthy of a philosopher, 12 because the method of reasoning was well known to Plato, as is shown by his writings.

Gemistos did not take the trouble to go into details, but his allusion to Plato's 'method of reasoning' shows that he gave much more importance to Plato's Sophist and Politicus than has been usual in this century with the great majority of Platonic scholars.

Georgios Scholarios Gennadios answered with a plea in favour of Aristotle, and Plethon rejoined, 13 insisting upon

¹⁰ Georgios Gemistos, born 1355 in Constantinople, died 1450. He appears to have been named Plethon only after coming to Italy in 1438. On him see: Fritz Schultze, Georgios Gemistos Plethon und seine reformatorischen Bestrebungen, Jena 1874.

11 The first edition of Plethon's work was published according to Fabricius at Venice 1532, together with a Latin paraphrase of it, written by Bernardino Donato. The British Museum has an edition of 1540: Bernardini Donati Veronensis, De Platonicae atque Aristotelicae philosophiae differentia, Venetiis 1540, 8vo. In this publication, after seventy-one pages of Latin text, begins the Greek original of Plethon: 'Γεωργίου τοῦ Γεμιστοῦ τοῦ καὶ Πλήθωνος, περὶ δυ 'Αριστοτέλης πρὸς Πλάτωνα διαφέρεται,' with a separate pagination of twenty-three leaves. Both the Latin and the Greek text were reprinted at Paris, 1541, 8vo, in the same order. The Latin text of Donato differs from the Greek of Plethon in so far as the last chapter is used as introduction, and the whole put into the form of a dialogue between Policarpus and Callistus, the second representing Plato's thoughts. Schultze quotes only the edition in 4to. published at Basel 1574. Plethon's pamphlet has been reprinted in vol. 160, pp. 889–934, of Migne's Patrologia Graeca, Paris 1866.

¹² Page 28 of the Venice edition (Migne 928 d); 'Αριστοτέλης . . . πάνυ σοφιστικόν τοῦτο ποιῶν καὶ φιλοσόφου τρόπου άλλοτριώτατον.

¹⁸ The pamphlet of Gennadios is lost, but Plethon's reply to it was pub-

Plato's superiority. These Greek polemics, continued later in the fifteenth century by George of Trebizond ¹⁴ and Bessarion, ¹⁵ were more rhetorical than scientific, and led to no objective study of Plato's logic. For those who wrote on that subject in the fifteenth and sixteenth centuries the chief aim was not to ascertain Plato's logical theories, nor how he found them. They acted rather as political opponents, fighting under the standard of Plato or of Aristotle. The champions on Plato's side failed to give exact quotations from his text in proof of their assertions.

In such comparisons between Plato and Aristotle some authors ascribed to their favourite thinker more than he would have claimed himself. In France, for instance, Champier 16 (1516, 1537) ventured to say that Plato invented the figures of syllogism; in Italy, Patrizi 17 (1571)

lished by W. Gass in vol. ii. pp. 54-117 of his work: Gennadius und Pletho, Aristotelismus und Platonismus in der Griechischen Kirche, Breslau 1844: 'Plethonis liber contra Gennadii scripta pro Aristotele ex codice Vratislaviensi nunc primum editus.'

- 14 Comparationes Philosophorum Aristotelis et Platonis a Georgio Trapesuntio . . . Venetiis 1523. Plato is, in this author's opinion, 'rudis, turpis, arrogans, invidiosus, obtrectator in 4 viros Graeciae salvatores,' &c.
- 18 Bessarionis Cardinalis Sabini et Patriarchae Constantinopolitani capitula libri primi adversus calumniatorem Platonis, without date, but printed at Rome 1469. Another edition, In calumniatorem Platonis libri quatuor, Venetiis 1503, is also in the British Museum. The author is anxious to show that Plato used all moods of all the figures of syllogisms.
- "Symphoriani Champerii, Symphonia Platonis cum Aristotele et Galeni cum Hippocrate, Parrhisiis 1516. Of the same author: Libri VII. de Dialectica, Rhetorica, Geometria, Arithmetica, Astronomia. etc., Basileae 1537. In this work, chap. v. of part 2, 'Quid syllogismus secundum Platonem,' contains the assertion 'Plato noster syllogismorum tractatu utitur arguendo et demonstrando.' Then, in the next chapter, 'De syllogismis cathegoricis,' we read 'Syllogismorum cathegoricorum tres figuras posuit Plato.'
- ¹⁷ Francesco Patrizi (on him see R. Bobba, 'Commentatori italiani di Platone,' Jan. 1892, Rivista italiana di filosofia) wrote: Discussionum peripateticarum tomi IV., Basileae 1581 (first published at Venice 1571). On p. 180 Plato is named 'logices sive dialectices inventor;' p. 189: 'syllogismi frequens est apud Platonem mentio.' In another work, Nova de

supposed that Aristotle wrote under his own name accounts of Plato's oral teaching; Ramus ¹⁸ (1578), Buratelli ¹⁹ (1573), Mazoni ²⁰ (1576), and Theupolis ²¹ (1576) insisted upon the identity of the Platonic and Aristotelian teachings. On Plato's side were also Bernardi ²² (1599), Calanna ²³ (1599), and Wower ²⁴ (1603).

Again, Zabarella 25 (1587) in Italy and Keckermann 26

universis philosophia libris quinquaginta comprehensa, Venetiis 1593 (first published in Ferrara 1591), in the chapter 'Plato exotericus,' p. 42, he starts the supposition that Plato's dialogues represent faithfully the historical Socrates, while Aristotle has written out the secret doctrine of Plato. He adds confidently, 'in philosophia Aristotelis nihil est certum,' and 'in philosophia Platonis rarissima sunt ea quae non sint certissima' (p. 44).

- ¹⁸ P. Ramus says (Scholae in liberales artes, p. 325): 'Speusippo nunquam persuasisset Aristoteles, Aristotelem primum logicae artis auctorem fuisse, cum hac in arte Speusippi discipulus Aristoteles potius fuisset et ex ejus emptis libris suos libros contexuisset.' Against the Aristotelicae animadversiones of the same author, published 1543, is directed: T. Carpentarii Platonis cum Aristotele in universa philosophia comparatio, Lutetiae 1573, wherein Plato is treated in George of Trebizond's manner.
- 19 Gabriel Buratellus, Conciliatio praecipuarum controversiarum Aristotelis et Platonis, Venetiis 1573. Morhof (Polyhistor literarius, ed. 2°, Lubecae 1714, p. 40) is right in saying on the author: 'potius suo quam auctorum ingenio rem egit, ut solent plerumque omnes conciliatores.' Buratelli has been followed in Sweden by J. Hising (Praeside . . . F. Törner, ideam Platonis breviter delineatam . . . proponit J. Hising, Upsalise 1706).
- ²⁰ Jacobi Mazonii Caesenatis de triplici hominum vita, Caesenae 1576, fol. 148, quaestio 2142: 'Plato demum veram excogitavit dialecticam, quam Aristoteles auxit. . . .' In a later work, In universam Platonis et Aristotelis Philosophiam Praeludia, Venetiis 1597, p. 118 FF., he enumerates the points in which both philosophers agree.
- ²¹ Stephani Theupoli, Benedicti filii, patricii Veneti Academicarum contemplationum libri decem, Venetlis 1576.

 - ²⁴ Joann. a Wower, De polymathia tractatio, Basileae 1603, chap. xx.
 - ²⁵ Jacobi Zabarellae Patavini Opera, Lugduni 1587, p. 42.
- ²⁶ Praecognitorum logicorum tractatus, a B. Keckermanno Dantiscano secunda editione recogniti, Hanoviae 1606, II. ii. 15, p. 82. This history of logic, published for the first time in 1598, was also reprinted in Keckermanni Opera, Genevae 1614. The author proclaims himself a Pole (vol. ii. p. 1009 of his works), despite his German name.

(1598) in Poland strongly favoured Aristotle's pretension to be considered as the founder of logic, while Crispi 27 (1594) denounced Plato as having given rise to a great number of heresies. All these works, some containing hundreds of pages occupied with Plato's logic, are devoid of scientific value, because their authors disdained the systematic and detailed study of Plato's own logical theories, and accepted too easily certain late authorities as exponents of Plato's teaching.

The first attempt to represent Plato's logic without Historians any polemical aim was made by Morainvillier d'Orgeville 28 of the (1650) in a work which had little vogue. But Morainvillier's object was not the history of human thought: he simply sought in Plato materials for a commentary on the teaching of the Church. He places Plato on the same footing with Proclus and Plotinus as authorities for Platonic teaching, and this is only one instance of the want of critical judgment which belonged to historians of philosophy of that epoch.

seventeenth century.

Thomas Stanley, in his History of Philosophy, and P. Gassendi, in his History of Logic, first treated the logic of Plato from a purely historical point of view.

- ²⁷ J. Baptistae Crispi, De ethnicis philosophis caute legendis, Romae 1594. The author enumerates on 529 pages in folio the heresies which he supposes to have emanated from Plato, and loses no opportunity of showing that Aristotle agrees better with the Church. This work is remarkable for its excellent indices.
- ²⁸ L. de Morainvillier d'Orgeville, Examen philosophiae Platonicae, Maclovii 1650, 8vo. 634 pages. This work, though it exists in the British Museum and the Bodleian Library, is not quoted in the bibliographies of Brunet, Graesse and Georgii, nor is the author's name mentioned in the biographical dictionaries of Michaud, Didot, Dezobry, and Bouillet, nor in the encyclopaedias of Brockhaus and Meyer. We learn from the introduction that the author was vicar of the bishop at Saint Malo and that Neoplatonic manuscripts brought from Constantinople by his uncle. the Bishop Achilles de Harley de Sancy, were entrusted to him that he might study them and use their contents for the benefit of the Church. This he did much better than a similar writer, Francesco de Vieri (Compendio della dottrina di Platone in quello che ella è conforme con la fede nostra, 191 pp. Fiorenza 1577), who, in his exposition of Plato's philosophy for the use of the Church, omitted logic altogether.

Both did so very briefly, and they were unable to distinguish between logical theories and logical reasoning. Stanley ²⁹ enumerates the kinds of syllogism used by Plato without noticing that the use of syllogisms is no more evidence of a knowledge of syllogistic theory than is throwing a stone of a knowledge of the science of mechanics. Gassendi ³⁰ wonders how Aristotle could boast of being the first inventor of syllogism, since Plato had frequently reasoned in syllogisms. To do this without knowing the syllogistic art he believed to be no less impossible than to make shoes without having learned the art of shoe-making. Though Fabricius ³¹ noticed these strange errors committed by historians of logic, he gave no detailed account of the logic of Plato, so that his observations remained without consequence for our subject.

Reaction against Plato. After Gassendi and Stanley there came in the seventeenth century a general reaction against Plato's logic. Voss (1658) in Holland ³² and Rapin ³³ (1678) in France,

- ²⁹ Thomas Stanley, *The History of Philosophy*, London 1655-56-60, 3 vols. vol. ii. pp. 58-67 treats of Plato's logic. He attributes to Plato 'the analytical method, the best of methods' (p. 17) and the use of syllogisms (p. 60).
- De Petrus Gassendus, Opera, Lugduni Batavorum 1658, vol. i. contains: 'De origine et varietate logicae,' reprinted in Petri Gassendi Logica, Oxonii 1718, wherein chap. iv. (pp. 42-49) bears the title 'Logica Platonis.' The passage mentioned in the text is pp. 25-26 of the same edition.
- ²¹ B. J. A. Fabricii Opusculorum historico-critico-literariorum sylloge, Hamburgi 1738, contains, pp. 161-184: 'Specimen elencticum historiae logicae,' first published at Hamburg in 1690; p. 165: 'Aliud longe est gaudere ratione, aliud esse logicum.'
- 26. Joh. Vossii de logices et rhetoricae natura et constitutione, Hagae comitis 1658 (chap. viii. § 5: 'Priorum inventa, etiam quae apud Platonem leguntur, levia sunt prae iis, quae Aristoteles repperit'). To the same epoch belongs G. Wegneri de origine logices, Oelsnae Silesiorum 1667; C. F. Ayrmann, De dialectica veterum, Vitembergae 1716. M. H. Trierenberg (De λόγφ et νφ Platonico, Wittenberg 1676) deals only with the meaning of some words in Plato and in later writers. M. R. Dauth's Plato coecutiens, Wittebergae 1686, is only idle talk on Plato's moral principles.
- Père Rapin, Œuvres diverses, Amsterdam 1693, 2 vols. In vol. i. pp. 269-482: 'La comparaison de Platon et d'Aristote avec les sentiments des pères sur leur doctrine,' written according to the dedication before 1678. Chap. i. of part III.: La logique de Platon: 'Si l'on examine soigneuse-

while acknowledging certain logical merits in Plato, placed Aristotle far above him. Samuel Parker ³⁴ (1666) argued, not only that Plato was no logician, but that he was not free from logical blunders. Stollen ³⁵ (1718), writing the history of logic, did not mention Plato, while Walch ³⁶ (1721) and Amort ³⁷ (1730), in their works on the same subject, were clearly on the side of Aristotle. Still later, a very popular logical writer, Genovesi ³⁸ (1745), thought that Plato's logic was not essentially different from the Socratic teaching.

Towards the end of the eighteenth century, after some Tenneless important writings by others, 39 there appeared the first mann.

ment la logique de Platon, on trouvera qu'il en a une, dont la fin est de délivrer l'esprit de l'erreur et de l'opinion, pour y introduire la science ' (p. 333). But in the same author's 'Réflexions sur la logique ' (vol. ii. pp. 370-384) we read (p. 374): 'il ne parut rien de réglé et d'établi sur la Logique devant Aristote.'

- ²⁴ Sam. Parker, A free and impartial censure of the Platonick Philosophie, Oxford 1666, contains (pp. 34-40) 'An account of the Platonick Logick.' The author says, against Bessarion, that Plato's inferences 'bottom upon uncertain and inevident principles,' that 'they are circular,' and 'that there is some flaw and incoherence in some of the intermediate propositions' (p. 37) Also Wagner (under the pseudonym Realis de Vienna, Discursus et dubia in Chr. Thomasii Introductionem ad Philosophiam aulicam, Ratisbonae 1691) says (p. 137) 'Plato ad logicos vix referri potest.' This agrees with the contempt for logic generally professed by J. F. Reimmann in his Critisirender Geschichtscalender von der Logica, Francfurt 1699, and other works (Versuch einer Einleitung in die Historiam literariam, Halle 1708, Versuch einer Einleitung in die Historiam literariam antediluvianam, Halle 1709).
- ²⁶ Gottlieb Stollen, Kurtze Anleitung zur Historie der Gelahrtheit, Halle 1718, 3 vols., contains (vol. ii. pp. 115–172) an history of logic.
- ³⁶ J. G. Walchii Parerga Academica, Lipsiae 1721, contains (pp. 453-848) an history of logic. On Plato he says 'ingenii vis fuit major in Platone quam judicii, quo si quis destitutus, haud aptus erit ad genuinam utilemque logicae artem ornandam' (p. 520); 'Aristoteles logicam redegit in formam artis' (p. 529).
- ³⁷ R. D. E. Amort, Philosophia Pollingana, Augustae Vindelicorum 1730, contains (pp. 589-544) a chapter—' de logica Platonis'—wherein the author endeavours to show the superiority of Aristotle.
- ** Antonii Genuensis artis logicocriticae libri V., ed. iv*, Neapoli 1758 (first edition 1745). On p. 9 he credits Socrates and Plato with the art of: 'recte definiendi, dubitandi opportune, inductionis analyticae.'
 - J. G. Daries, Via ad Veritatem, ed. 2°, Jense 1764 (pp. 210-217; 'de logica

work on Plato's logic that was based on Plato's own writings. This also gave some indication of the importance of a true chronology of the Platonic dialogues as a help towards the right understanding of Plato's philosophy. Tennemann's 40 treatise on Plato's logic under the title of Theorie des Vorstellens, Denkens und Erkennens occupies the greater part of the second volume of his System der Platonischen Philosophie. Compared with his predecessors, his great merit is that he quotes Plato exactly, and relies on Plato alone as the interpreter of the Platonic teaching. But, being unable to resolve the problem of Platonic chronology, he did not attempt to give an account of the evolution of Plato's logical

Platonis'). S. C. Hollmannus, Philosophiae rationalis ed. auctior, Goettingae 1767 (contains, pp. 53-76, a short history of logic). J. A. Eberhard, Allgemeine Theorie des Denkens und Empfindens, Berlin 1776 (pp. 109 sqq.). J. J. Engel, Versuch einer Methode die Vernunftlehre aus Platonischen Dralogen zu entwickeln, Berlin 1780; (also pp. 339-512 in Kleine Schriften von J. J. Engel, Berlin 1795, deals chiefly with Plato's Meno, and is intended for use in the schools). J. J. H. Nast, De methodo Platonis philosophiam docendi dialogica, published first 1787, then reprinted in Opuscula latina, Tubingae 1821 (pp. 123-141); complains that the neoplatonists 'veros philosophi sensus turpiter depravarunt' (p. 125), but admits that it is difficult 'veros Platonis sensus eruere ' (p. 133). F. V. Leberecht Plessing, Memnonium, Leipzig 1787, and Versuche zur Aufklärung der Philosophie des ältesten Alterthums, Leipzig 1788-1790, vol. i.; believes, like J. J. Syrbius (Institutiones philosophiae primae, ed. 2ª, Jenae 1726), that Plato has taken all his philosophy from the East, and Aristotle owes everything to Plato; against this view wrote J. J. Combes Dounous, Essai historique sur Platon. Paris 1809 (2 vols.). Dieterich Tiedemann, Geist der speculativen Philosophie (6 vols.), Marburg 1791-1797; (vol. ii. pp. 63-198 deals with Plato, whom he credits with the discovery (p. 87) 'dass die wissenschaftliche Erkenntniss unveränderliche, nothwendige Grundsätze und Begriffe heischt'). Dammann, De humanae sentiendi et cogitandi facultatis natura ex mente Platonis, Helmstadii 1792 (2 parts). J. Gottlieb Buhle, 'Commentatio de philosophorum graecorum ante Aristotelem in arte logica invenienda et perficienda conaminibus' (pp. 234-259) in the Commentationes societatis regiae scientiarum Gottingensis ad annos 1791-92, vol. xi. Gottingae 1793, insists on the importance of Plato's logic.

⁴⁰ W. G. Tennemann, System der platonischen Philosophie, Leipzig 1792-95, 4 vols. (vol. ii. p. 215: 'Plato verwechselte das Denken mit dem Erkennen'). Tennemann deals also with Plato's logic in his Geschichte der Philosophie, vol. ii. Leipzig 1799 (pp. 242-344).

theories. He quotes chiefly the dialectical works-Theaetetus, Parmenides, Sophist, Politicus, Philebus, which, according to him, were written soon after the death of Socrates, though really they are among Plato's latest works. His predilection for these dialogues enabled Tennemann to perceive that Plato's ideas were for him nothing but notions of the human mind: while Brucker and many other writers, 41 including such authorities of our own time as E. Zeller, conceived the Platonic ideas as independent beings, separated from the material world, much as they are represented in certain passages of Aristotle. Tennemann gave the first impartial exposition of the logic of Plato, as it is to be found in Plato's own works, free from later corruptions. But, unaware of the order in which the works were written, he quotes early and late dialogues indifferently, and makes some serious mistakes: as, for instance, in his contention that Plato did not distinguish thought from knowledge. He admits that Plato had a theory of proof, that he gave valuable

⁴¹ Most of the ancient Platonists, as Albinus, Plotinus, Porphyrius, Jamblichus, Proclus, as well as Plethon and Ficinus in the fifteenth century, explained the Platonic ideas as existent in God. This view has been also maintained by :- R. Goelenius (Idea Philosophiae Platonicae, Marpurgi 1612, p. 176: 'Plato intelligit ideas . . . in mente divina immortales et immutabiles'); Scipio Agnelli (Disceptationes de ideis, Venetiis 1615, p. 33: 'Peripatetici absurdam illam opinionem Platoni tribuunt quae tanto Philosopho penitus indigna est. Volunt Platonem existimasse . . . seorsum a divina mente subsistentes Ideas esse'); R. Cudworth (The True Intellectual System of the Universe, London 1678; also C. E. Lowrey, The Philosophy of R. Cudworth, New York 1884); J. L. Mosheim (in his Latin translation of R. Cudworth's Systema intellectuale hujus universi. Jenae 1783, vol. i. pp. 662-663); J. Helwig (De ideis platonicis. in Electorali Viadrina, 1650). In opposition to this view, there has been put forth another opinion, according to which Plato's ideas were substances independent of God and separated from him. This was chiefly supported by M. J. Thomasius (Orationes, Lipsiae 1683, pp. 275-300, oratio xiii.: De ideis Platonicis exemplaribus,' habita die 9 Aprilis a. 1659); J. Brucker (Historia philosophica doctrinae de ideis, Augustae Vindelicorum 1728, without the author's name, p. 36: 'ideae Platoni sunt aeterna rerum sensibilium exemplaria et formae, quae propria substantia gaudent.' Also in J. Bruckeri Historia critica philosophiae, Lipsiae 1742, vol. i. p. 691); M. G. E. Schulze (De ideis Platonis, Wittemberg 1786).

hints as to the method of scientific investigation, and that he was probably familiar with that theory of syllogism which caused Aristotle to be considered by many historians as the first logician.

Tennemann's work appeared at a time when other writers ⁴² also favoured Plato in greater measure than heretofore. It became generally recognised that Plato alone is a trustworthy witness as to his own logic, and the philosopher Herbart ⁴³ insisted upon the importance of interpreting Plato by his own writings.

Van Heusde.

The next attempt to give an account of Plato's logic was made by van Heusde 44 in his work on Platonic philosophy. Van Heusde's aim was chiefly to give an introduction to the reading of Plato's dialogues. In his appreciation of Plato, enthusiastic as it is, there is a strange contempt for the theory of proof, and he sees in Plato's dialogues chiefly a theory of invention. forgets that no truth is really invented before it is proved. He neglects to prove his own assertions, and his three volumes are less a scientific investigation than a brilliant anthology from Plato's works, with the editor's comments on them. On the pretext that it is not advisable to break up an organic whole, van Heusde abstains from comparing the text of various dialogues, and limits himself to an epitome. He regards Plato's logic as standing quite apart from later logic, and even from the logic of Aristotle. We

⁴² G.G. Fülleborn, 'Kurze Geschichte der Logik bei den Griechen,' in Beyträge zur Geschichte der Philosophie, Züllichau und Freystadt 1794, p. 167; K. Morgenstern, Entwurf von Platons Leben aus dem englischen übersetzt und mit Zusätzen versehen, Leipzig 1797 (from the anonymous Remarks on the Life and Writings of Plato, Edinburgh 1760); J. J. Wagner, Wörterbuch der platonischen Philosophie, Göttingen 1799 (very superficial).

⁴⁸ J. F. Herbart, De platonici systematis fundamento, first published 1805, reprinted in vol. i. of Herbart's Kleinere philosophische Schriften her. v. Hartenstein, Leipzig 1842; believes the theory of ideas the most important in Plato's philosophy, and holds the ideas to be independent substances.

⁴ P. G. van Heusde, Initia philosophiae platonicae, 3 vols., Trajecti ad Rhenum 1827-1831-1836; a 2nd ed. in 1 vol., Lugduni Batavorum 1842.

may either accept or reject it, but are not expected to find a continuity in the development of logic from Plato down to our own times. Van Heusde thinks, and in this he shares the opinion of Herbart, that it is useless to seek a 'logic' in Plato's dialogues, though they contain a 'philosophy of truth' and a 'theory of invention.' speaks throughout of a philosophy of Plato as a whole, without any distinction of epochs in Plato's own development. He seems unaware of the possibility of inferences from the comparison of passages, or of such inferences about Plato as might go beyond the first impressions of an attentive reader of the dialogues. For van Heusde a modern representation of any part of Plato's philosophy is no more than an epitome of Plato's works.

After the publication of the work of van Heusde, most Recent writers on Plato's logic, or on any portion of it, limited logical their attention to a small number of Plato's works, 45 some- writers. times to a single dialogue, and this prevented them from forming any idea of a logical evolution in Plato. Prantl, 46 who looks upon Plato as a simple predecessor

46 Carl Prantl, 'Ueber die Entwickelung der Aristotelischen Logik aus der Platonischen Philosophie,' p. 129 sqq., in Abhandlungen der philosophisch-philologischen Classe der königlich-bayerischen Akademie der

⁴⁵ Such small contributions, which are rather commentaries on some passages than historical investigations, rarely show in their titles the limitation of the subject, as for instance: K. Eichhoff, Logica trium dialogorum Platonis explicata (Meno, Crito, Phaedo), Duisburg 1854; R. Kleinpaul, Der Begriff der Erkenntniss in Platos Theatet, Gotha 1867; Holzer, Grundzuge der Erkenntnisstheorie in Platos Staat, Cottbus 1861; H. Dittel, Platos Anschauungen über die Methode des wissenschaftlichen Gesprächs nach den Dialogen Protagoras Gorgias Meno, Salzburg 1869; Fr. Schmitt, Die Verschiedenheit der Ideenlehre in Platos Republik und Philebus, Giessen 1891; W. Brinckmann, Die Erkenntnisstheorie in Platons Theätet, Bergedorf Programm, Jena 1896. Other authors preferred more general titles: F. Ebben, De Platonis idearum doctrina, Bonn 1849; C. F. Cooper, On the Genius and Ideas of Plato, Göttingen 1864; P. Durdik, Wie urtheilt Plato über das Wissen? Prag 1875; R. Wutzdorff, Die platonischen Ideen, Görlitz 1875; O. Ihm, Ueber den Begriff der platonischen δόξα und deren Verhältniss zum Wissen der Ideen, Leipzig 1877; J. Wagner, Zu Platos Ideenlehre, Nikolsburg 1881; M. Guggenheim, Die Lehre vom apriorischen Wissen, Berlin 1885.

of Aristotle, and gives him in his history of logic an exceedingly modest place, did nothing beyond collecting a very reduced number of logical quotations—chiefly from Plato's latest works. He said clearly that Plato's ideas had nothing to do with logic (p. 83).

Other writers, as Janet ⁴⁷ and Heyder, ⁴⁸ who compared Plato and Aristotle with Hegel, or Waddington, ⁴⁹ who argued that Plato was wholly independent of eastern philosophy, or Fouillée, ⁵⁰ who exaggerated the importance of the theory of ideas in Plato's philosophy, or those who, like Lukas, ⁵¹ treated some special problems of Plato's logic, ⁵² agree in one respect: that they are ignorant of the

Wissenschaften, vii Band 1° Abt., München 1853; also Geschichte der Logik im Abendlande, vol. i. pp. 59-84, Leipzig 1855.

⁴⁷ Paul Janet, Etude sur la dialectique dans Platon et dans Hegel, Paris 1848, 2nd ed. 1860. On the same subject: A. Vera, Platonis, Aristotelis et Hegelii de medio termino doctrina, Paris 1845.

⁴⁸ Carl L. W. Heyder, Kritische Darstellung und Vergleichung der Methoden aristotelischer und hegelscher Dialektik, Erlangen 1845; on Plato pp. 59-131; and by the same author: Die Lehre von den Ideen, Frankfurt a. M. 1874, wherein only pp. 4-12 deal with Plato.

- 4º C. Waddington, Essais de Logique, Paris 1857 (leçons faites à la Sorbonne 1848–1856). In this book, p. 81: Essai iii. De la découverte du syllogisme. On p. 93 the author asserts that the word syllogismos is unknown in Greece before Aristotle. This is an error, for the word occurs in the Cratylus and in the Theaetetus, as the author could have easily seen from Ast's Lexicon Platonicum. Such an error appears quite natural when we know that the same author thirty years later thought that Serranus edited in Bâle in 1578 an edition of Plato 'qui fait encore autorité' (Séances et travaux de l'Academie des sciences morales, tome 126, p. 5: Ch. Waddington, 'De l'authenticité des écrits de Platon,' Paris 1886). Anybody who studies Plato knows that the edition of 1578, published in Geneva, not in Bâle, by Stephanus and not by Serranus, has no authority whatever in comparison with the editions of Bekker, Hermann, and Schanz.
- ⁴⁰ Alfred Fouillée, *La philosophie de Platon*, Paris 1869, 2nd ed. Paris 1888, 4 vols., of which vol. i. contains 'Théorie des idées et de l'amour.'
- ⁵¹ F. Lukas, *Die Methode der Eintheilung bei Platon*, Halle 1888, deals only with nine dialogues, but represents very completely the theory and practice of classification used in these works.
- ⁵² On special parts of Plato's Logic there are some very valuable contributions: J. R. Lichtenstädt, *Platons Lehren auf dem Gebiet der Naturforschung und der Heilkunde*, Leipzig 1826 (pp. 85–96: 'Empfinden und Wahrnehmen'); L. Dissen, *De arte combinatoria in Platonis Theaeteto*,

decisive distinction between the philosopher's earlier and later writings.

On the other hand, the problem of the chronology of Philo-Plato's dialogues was much discussed by writers more logical interested in the philological details, or in the historical inquiries. allusions of Plato's dialogues, than in his logic. Sometimes, as in the voluminous works of H. Ritter and Brandis,53 the chronology was discussed without any bearing on the subsequent exposition of Plato's philosophy. K. F. Hermann acknowledged a gradual development of Plato's thoughts, and intended to give an account of this development, but he published no more than the first volume of his work, and treated in it only the chronology of Plato's writings, not the evolution of his philosophy.

The first to attempt a combination of both problems

Göttingen 1836, reprinted in: Kleine lateinische und deutsche Schriften, Göttingen 1839; G. Bode, Materia apud Platonem qualem habeat vim atque naturam, Neu Ruppin 1853; C. Kiesel, De ratione quam Plato arti mathematicae cum dialectica intercedere voluerit, Koln 1840. Of the same author: De primis artis logicae praeceptis Platone duce tradendis, 1851; Exempla ad illustrandam concludendi doctrinam ex Platonis libris, Dusseldorf 1857; and De conclusionibus platonicis, Dusseldorf 1863; Martinius, Ueber die Fragestellung in den Dialogen Platos, Norden 1871; Th. Kock, 'Ein Kapitel aus der formalen Logik, angewendet auf Aristoteles und Platon' (in Hermes, vol. xviii. pp. 546-557, Berlin 1883); Saueressig, Ueber die Definitionslehre Platos, Oberehnheim 1884; A. Beckmann, Num Plato artefactorum ideas statuerit, Bonn 1889. On Plato's relation to Kant: J. Heidemann, Platonis de ideis doctrinam quomodo Kantius et intellexerit et excoluerit, Berolini 1863; Stäckel, Der Begriff der Idee bei Kant und bei Plato, Rostock 1869; C. Fuchs, Die Idee bei Plato und Kant, Wiener Neustadt 1886. On Aristotle and Plato: Fr. Michelis, De Aristotele Platonis in idearum doctrina adversario, Brunsbergae 1864; H. Cazac, Polémique d'Aristote contre la théorie platonicienne des idées, Tarbes 1889; A. Biach, 'Aristoteles Lehre von der sinnlichen Erkenntniss in ihrer Abhängigkeit von Plato' in Philosophische Monatshefte, vol. xxvi. pp. 270-287, Heidelberg 1890.

⁵² H. Ritter, Geschichte der Philosophie alter Zeit, Hamburg 1836-38. The author settles the chronology and authenticity of Plato's writings in vol. ii. pp. 159-208, but in his later account of Plato's logic on pp. 259-388 makes no use of the order of Plato's work recognised by him. Also Brandis, Handbuch der Geschichte der griechisch-römischen Philosophie, vol. ii. Berlin 1844, accepts a certain order of Plato's dialogues on pp. 161-179, but makes no use of that order in his account of Plato's Philosophy.

was Susemihl,⁵⁴ who represented the philosophical theories of each dialogue separately, in what appeared to him to be the historical order of their composition. Susemihl's work was not limited to Plato's logic, and it consisted chiefly in an epitome of each dialogue, with commentaries on the theories contained in it. He laid no special stress on logic, and at the time of writing did not perceive the true order of the dialogues as clearly as he perceived it afterwards.⁵⁵

After Susemihl, the relation between the philological question of the chronology of dialogues and the philosophical aim of understanding the growth of the theories contained in these dialogues was insisted upon by Michelis, 56 but he dedicates only a few pages of his work to the logic of Plato, dealing chiefly, like Ribbing, 54 with the theory of ideas.

Ueberweg

Ueberweg,⁵⁷ in his treatment of the chronological problem, has shown that the comparison of logical

** F. Susemihl, Die genetische Entwickelung der platonischen Philosophie, Leipzig 1855-1857-1860, represents the Sophist and Politicus as earlier than the Banquet and Republic. The same opinion is held by S. Ribbing, Genetische Darstellung der platonischen Ideenlehre, Leipzig 1863-64 (first published in Swedish at Upsala in 1858), and by W. Rosenkrantz, Die Wissenschaft des Wissens, München 1866-68, vol. ii. pp. 1-54: 'Ueber die platonische Ideenlehre.' The 'genetische Methode 'had been previously advocated by Hermann (Geschichte und System der Platonischen Philosophie, I** Theil, Heidelberg 1839), but he did not fulfil his promise of a systematical exposition of Plato's philosophy.

³⁵ Susemihl has changed his former opinions under the influence of later investigations, and he recognised in 1884 (Wochenschrift für Klassische Philologie, 1er Jahrgang, Leipzig 1884, p. 523, in a review of Peipers' Ontologia Platonica) that the Sophist and the Politicus were written after the Republic.

⁵⁶ F. Michelis, Die Philosophie Platons in ihrer inneren Beziehung sur geoffenbarten Wahrheit, Münster 1859-60; the author held the Sophist and Politicus, as well as the Parmenides, to be earlier than the Republic, and even than the Banquet, Phaedo, and Phaedrus.

⁵⁷ Ueberweg's Untersuchungen über die Echtheit und Zeitfolge Platonischer Schriften, Wien 1861, is one of the most important works on the subject of Plato's writings. The only authors before Ueberweg who believed the Sophist to be later than the Republic were G. F. W. Suckow (Die wissenschaftliche und künstlerische Form der platonischen Schriften,

theories is of importance in determining the order of the dialogues; and on that basis he was the first to show the very late date of the Sophist and Politicus, which had been almost unanimously placed by former philologers earlier than the Republic, and by most of them even earlier than the Banquet. But Ueberweg limited his valuable observations to a few dialogues, and to a few striking logical opinions expressed in them. After him many writers touched upon different points of Plato's logic. without attempting to give a full account of it and of the changes which took place in his logical theories.

In 1873 the philosophical faculty of the University of Oldenberg Göttingen offered a prize for a work on the Platonic dialectic. The prize was awarded to a brief dissertation on this subject by Oldenberg.58 The author tried to find a difference between the earlier and the later dialectic of Plato, but he neglected Ueberweg's arguments, and ignored Campbell's introduction to the Sophist and to the Politicus; so that, under the influence of the prevailing authority of Schleiermacher and Hermann, he conceived the form of dialectic which appears in the Sophist and Politicus to be earlier than that in the Republic. This he might have avoided, had he cared to compare the Laws with these dialogues.

The general inclination to limit the inquiry to a few Peipers dialogues has led some authors to strange extravagances:

Berlin 1855) and Ed. Munk (Die natürliche Ordnung der platonischen Schriften, Berlin 1856), but they thought so chiefly because they imagined the conversations between Socrates and his pupils as written in the same order as they had been held, and the Sophist is the continuation of the Theaetetus at the end of which Socrates goes to meet the accusation of Meletus.

58 H. Oldenberg, De Platonis arte dialectica, Gottingae 1873, very superficial. Besides this, another dissertation on the same subject, by J. Wolff, was also awarded a prize by the philosophical faculty at Göttingen, and published in the Zeitschrift für Philosophie und philosophische Kritik, vol. lxiv. pp. 200-253, vol. lxv. pp. 12-34, and vol. lxvi. pp. 69-85, 185-220 (Johannes Wolff: 'Die platonische Dialektik, ihr Wesen und ihr Werth für die menschliche Erkenntniss'). But Wolff did not understand the importance of chronology and he misunderstood Plato in many points.

as, for instance, in disguising the restricted ground of their investigations under very promising titles. Peipers 59 wrote more than seven hundred pages of commentary on a single dialogue, the Theaetetus, and he divided his work into such parts as 'Consideration of the second part of the Theaetetus,' and 'Consideration of the third part of the Theaetetus,' closing it with a 'Consideration of the first part of the Theaetetus.' He devoted to comparisons with other dialogues about one-eighth of his volume: not more, in fact, than anybody should have given in a good commentary on any single dialogue. This very conscientious commentary of Peipers' is styled Erkenntnisstheorie Platos, a misleading title, which has so completely deceived some reviewers that, for instance, Stein,60 in his short history of the Greek theory of knowledge, says that the Platonic theory of knowledge has found in Peipers an able exponent. Peipers himself, though his work was received by philological reviewers with the greatest consideration,61 writing at a later date on the ontology of Plato, gave-not a commentary on some other dialogue, but—an exposition of the ontological and of some logical theories of Plato, in their chronological order. And he had the great merit of finding by this method, quite independently of others who had earlier arrived at the same result, that the Sophist, the Politicus, and the Philebus are later than the Republic.

Since Peipers, nobody has attempted to give a full

D. Peipers, Die Erkenntnisstheorie Platos, Leipzig 1874.

[•] L. Stein, Die Erkenntnisstheorie der Stoa, Berlin 1888, contains, pp. 70-77, a short chapter, 'Platos Erkenntnisstheorie.'

work is 'tief eindringend und scharfsinnig gearbeitet, klar und schön geschrieben.' R. Hirzel in Jenaer Literaturseitung, 2° Jahrg. Jena 1875, p. 469, recognises in Peipers' work 'Scharfsinn, Methode, Wissen, Klarheit, Durchsichtigkeit,' and H. Schmidt, in vol. cxi. pp. 477-487 of the Jahrbücher für classische Philologie (Leipzig 1875), admits the 'Gründlichkeit, Tiefe, Klarheit' of the same. Not one of these reviewers complained about the misleading title, as if it were quite natural to name a commentary to a single dialogue Erkenntnisstheorie Platos.

account of Plato's logic, but among the recent writers on Differ-Plato's philosophy H. Jackson 62 has confirmed Ueberweg's ences of and Peipers' finding as to the late date of the dialectical opinions dialogues according to the modification of the theory of ideas they contain; and A. Benn 63 by independent logic. observations found in the Sophist the transition from the Platonic to the Aristotelian logic, thus implying that the Sophist and Philebus were written later than the Republic, which contains the classical theory of ideas nearly in the form which is criticised by Aristotle. Benn also insisted upon the very important fact, that the socalled doctrine of ideas was by no means the chief logical theory of Plato, and that in his later works his earlier opinions are considerably modified. But it did not form part of the scope of Benn's work to give a detailed account of these changes, and thus the history of Plato's logical evolution remains as yet untold. Nothwithstanding the many defenders of Plato's logical merits,64 there are still historians of logic, as for instance Franck, Kuno Fischer, Rabus, Hirzel, who choose to see in Aristotle the founder of that science.65

Plato's

⁶² H. Jackson, 'Plato's later theory of ideas,' in the Journal of Philology, vols. x., xi., xiii., xiv., xv., London 1882-86.

⁶³ A. W. Benn, The Greek Philosophers, London 1882, vol. i. p. 264.

⁶⁴ Plato's logical merits have been insisted upon by T. G. Danzel (Plato philosophiae in formam disciplinae redactae parens et auctor, Lipsiae 1845), J. B. Tissandier (Examen critique de la Psychologie de Platon, Paris 1851), L. Szczerbowicz (Parmenides filozof z Elei, Warszawa 1868, p. 38), and in general histories of logic by C. F. Bachmann (System der Logik, Leipzig 1828), Troxler (Logik, Stuttgart 1829-1830, 3 vols.), Ch. Renouvier (Manuel de philosophie ancienne, Paris 1844), H. Siebeck ('Die Anfänge der Erkenntnisslehre in der griechischen Philosophie' in Zeitschrift für exacte Philosophie, vol. vii. pp. 357-380, Leipzig 1867), Giov. Cesca (La teorica della conoscenza nella filosofia greca, Verona 1887).

⁴⁸ Aristotle is estimated as the founder of logic by Fr. Calker (Denklehre, Bonn 1822), Ad. Franck (Esquisse d'une histoire de la logique, Paris 1838), Kuno Fischer (Logik und Metaphysik, Stuttgart 1852), L. Rabus (Logik und Metaphysik, Erlangen 1868), R. Hirzel ('De logica Stoicorum' in Satura philologa, Hermanno Sauppio obtulit amicorum decas, Berolini 1879). What K. Fischer ascribes only to modern philosophy, 'die freie voraussetsungslose Erkenntniss' (p. 17), is to be found already in Plato.

Besides the authors named, a great number have written in general terms on Plato's dialectic, promising more in the titles of their works than they could give.⁶⁶

66 Many works bearing on their titles the name of Plato do not really belong to Platonic bibliography, because they contain nothing of any importance for our knowledge of Plato. Some authors of popular histories of philosophy writing about Plato invent freely what they think will interest their readers. Aston Leigh (The Story of Philosophy, London 1881) counts among Plato's pupils Isocrates, his rival and enemy, and regrets that Plato was born before his time. A. Lefèvre (La philosophie, Paris 1879) makes Plato a sceptic. To the same class belongs Courdaveaux (La philosophie grecque mise à la portée de tous, Paris 1855). Some other authors go still farther in their imagination: E. Welper (Platon und seine Zeit, Kassel 1866) represents Plato as defending himself against the love of a girl unknown to history, and selling olive-oil in Egypt. E. l'Ollivier (La méthode de Platon, Paris 1883) pays a visit to Plato in the Champs Elysées, where he meets him in company of Plotinus and Proclus, speaking Latin. A. T. Haymann (Ariston Platon, sein Leben und Wirken im Lichte seiner Zeit, Dresden 1871) makes the discovery that Plato began at an early age to learn Greek, and accumulates within a few pages an incredible number of blunders, though he quotes as his source of information Brockhaus' Conversationslexicon. J. de Sales (Ma République, auteur Platon, Paris 1790) and another anonymous author (Platone in Italia, Milano 1804) use the name of Plato to give authority to their political predictions. G. A. Heigl (Die platonische Dialektik, Landshut 1812) mixes up fragments of Plato's dialogues with his own inventions. Enoch Pond (Plato: his Life, Works, Opinions, Portland, Maine 1847) finds as the chief result of his study of Plato (in Taylor's translation) 'the divine origin and unspeakable importance of the Bible.' The same conclusion is reached by Dietrich Becker (Das philosophische System Platons in seiner Beziehung zum christlichen Dogma, Freiburg 1862), and R. Bobertag (De ratione inter spiritum sanctum et mentem humanam ex Platonis philosophia intercedente, Vratislaviae 1824). Among books on Plato for general readers, G. P. Weygoldt (Die Platonische Philosophie nach ihrem Wesen und ihren Schicksalen für höhergebildete aller Stände dargestellt, Leipzig 1885) has happily avoided striking errors, while A. Arnold (Platons Werke einzeln erklärt und in ihrem Zusammenhange dargestellt, Berlin 1835-1836, Erfurt 1855; System der platonischen Philosophie, Erfurt 1858; Einleitung in die Philosophie durch die Lehre Platos vermittelt, Berlin 1841) undertook a task exceeding his knowledge. Besides these works there has always been idle talk on Plato in many smaller dissertations: G. Schultgen (De Platonis arte dialectica, Wesel 1829); C. F. Wieck (De Platonica philosophia, Merseburgi 1830); Fr. Hoffmann (Die Dialektik Platons. München 1882); F. W. Braut (Bemerkungen über die platonische Lehre vom Lernen als einer Wiedererinnerung, Brandenburg 1882); H. Brueggemann (De artis dialecticae, qua Plato sibi viam ad scientiam veri munivit, forma ac ratione, Berolini 1888); C. Kühn (De dialectica Platonis, Berolini 1848) give much less than might be expected Of such contributions to Platonic literature, most are devoted to the discussion about Platonic ideas, which are held by some to be independent substances, ⁶⁷ by others to be God's thoughts, ⁶⁸ and again by others to be certain

from the titles, and do very little more than collect quotations without order or method. R. Doehn (De speculativo logices platonicae principio, Gryphiae 1845) gives a series of comparisons between Plato and other philosophers from Anaximander to Hegel. Carl Gunther ('Betrachtungen über die platonische Dialektik' in Philologus, Band v. pp. 36-84, Göttingen 1850) and E. Alberti ('Zur Dialektik des Plato,' pp. 112-168 in I r Supp. Band of Jahrbucher für classische Philologie, Leipzig 1855) have been at least more modest in the title of their articles, and Alberti acknowledges that he wrote more for his own pleasure than for his readers' benefit. E. Schulte's Platos Lehre von der Erkenntniss, Fürstenwalde 1868, is a jest, because the reader, whose expectations have been raised by the title, is disappointed when he finds some pages of comments on certain passages of a single dialogue. F. Faber (De universa cognitionis lege, qualem Plato statuit, cum aristotelea comparata, Vratislaviae 1865) causes a similar disappointment to the reader; and O. Caspari (Die Irrthümer der altclassischen Philosophen in ihrer Bedeutung für das philosophische Princip, Heidelberg 1868) seems to know Plato only from references. Schnippel (Die Hauptepochen in der Entwickelung der Erkenntnissprobleme, Gera 1874) gives only a summary of the Theaetetus. C. A. Funke (Die Lehre Platos von den Seelenvermögen, Paderborn 1878) accuses Plato 'keinen Begriff vom Ich gehabt zu haben.' Carl Schmelzer (Eine Verteidigung Platos, Bonn 1885) thinks that Plato's political theories are not meant seriously, and have to be taken as jokes. All these writings, quoted here only to show how Plato's name is abused, are not worth reading.

67 The ideas were explained as self-existing substances after Herbart chiefly by L. Wienbarg (De primitivo idearum platonicarum sensu, Marburgi 1829), F. W. Graser (Ueber Platos Ideanlehre, Torgau 1861), T. Maguire (An essay on the Platonic idea, London 1866), Alfr. Fouillée (Histoire de la philosophie, Paris 1875, p. 90), Aemilius Kramm (De ideis Platonis a Lotzei judicio defensis, Halae 1879), Al. Chiappelli (Della interpretazione panteistica di Platone, Firenze 1881, p. 131), W. Pater (Plato and Platonism, London 1893), and Zeller.

century by Stallbaum (Platonis Parmenides cura G. Stallbaumi, Prolegomena p. 266, and in many other Prolegomena to Platonic dialogues), H. F. Richter (De ideis Platonis, Lipsiae 1827), L. Lefranc (De la critique des idees platoniciennes par Aristote, Paris 1843), R. Blakey (Historical Sketch of Logic, Edinburgh 1851), J. Felix Nourisson (Quid Plato de ideis senserit, Lutetiae Parisiorum, 1852. Exposition de la théorie platonicienne des idées, Paris 1858), Alfred Fouillée (in his earlier work La Philosophie de Platon, Paris 1869), G. Behncke (Platos Ideenlehre im Lichte der aristotelischen Metaphysik, Berlin 1873), W. T. Harris ('Plato's Dialectic

notions of the human mind.⁶⁹ These differences of opinion upon a subject so frequently dealt with by Plato

and Doctrine of Ideas' in the Journal of Speculative Philosophy, January 1888, pp. 94-112, April 1888, pp. 113-117).

That the Platonic ideas are neither substances nor God's thoughts. but a kind of notions of the human mind, was first supposed in modern times by Kant in his Kritik der reinen Vernunft (p. 370 of second edition of 1787), in so far as he alluded to the possibility of 'eine mildere Auslegung' of what Plato said about ideas. Kant's indication has been followed out by G. Faehse (De ideis Platonis, Lipsiae 1795) and also arrived at independently by Tennemann. Then Trendelenburg (Platonis de ideis et numeris doctrina ex Aristotele illustrata. Lipsiae 1826), after a careful comparison of all quotations from Aristotle, proved that only a wrong interpretation of some passages could have led to the supposition that the ideas are self-subsistent substances. Trendelenburg thinks: 'si sunt ideae a rebus sejunctae nec tamen alicubi extra eas positae, nihil restat, nisi ut menti insint' (p. 45), which leads him to give that 'mildere Auslegung' of ideas to which Kant alluded. Trendelenburg's argument is the more important, inasmuch as he builds his conclusions on the text of Aristotle, while the same text wrongly interpreted leads Zeller to admit that Plato held his ideas to be substances existing apart from objects of experience. Trendelenburg's view was also sustained by J. G. Mussmann (De idealismo sive philosophia ideali, Berolini 1826), Dr. Schmidt (Ueber die Ideen des Plato, Quedlinburg 1835), H. Ritter and Brandis (see above note 53). After these historians came a very important dissertation of C. Levêque (Quid Phidiae Plato debuerit, Parisiis 1852), in which the analogy between the philosophic ideas and the 'in mente insita aeternae pulchritudinis effigies 'was shown with great skill. A similar argumentation led Hermann Cohen ('Die Platonische Ideenlehre,' pp. 403-464 in vol. iv. of the Zeitschrift für Völkerpsychologie, Berlin 1866), independently of Levêque, to the understanding that the ideas were 'geschaut' by Plato in the same way as the artist sees in his own thoughts the work he intends to produce. But Cohen still believed that for Plato each idea was a substance, and only later (Platons Ideenlehre und die Mathematik, Marburg 1879) he came to accept Lotze's interpretation (Lotze, Logik, Leipzig 1874, p. 501), according to which the οὐσία of ideas is only a 'gelten,' not a separate substantial existence. The idea as a general notion has been also accepted by J. Steger (Platonische Studien, Innsbruck 1869-1872, part 1 p. 39), Carl Heyder (Die Lehre von den Ideen, Frankfurt a. M. 1874, p. 5: 'der Ausgangspunkt der Ideenlehre war jedenfalls wie nach der einen Seite ein logischer, das im Begriff gedachte Allgemeine und Beharrliche, so andererseits ein ontologisch-metaphysischer; denn dies Allgemeine und Unwandelbare in der Vielheit und in der Veränderung der Erscheinungen ist zugleich das wahre Sein und Wesen der Sache'), Dieck (Untersuchung zur platonischen Ideenlehre. Naumburg 1876, develops Lotze's view), G. M. Bertini (Nuova interpretazione delle idee Platoniche, Torino 1876, p. 18: 'quando Platone dice che le idee sono, non le trasforma con ciò in sostanse individue. are plainly due to the neglect of chronology, without which a scientific exposition of Plato's logic or of any other part of his philosophy is impossible.

The works of our predecessors contain valuable hints Inferences of the way in which Plato's logic should be studied. First of all, most modern writers on the subject advise us to trust only Plato himself as to his own logical theories, and not to be deluded by later writers, who, without a scientific method of investigation, attributed to him opinions absent from his writings. A philosopher who spent more than fifty years in composing and polishing works which are well preserved, may be assumed to have expressed his views in them almost as fully as in his oral teaching, about which we have no direct testimony beyond a vague allusion in Aristotle.

from the literature on Plato's logic.

We also see clearly from existing works on the logic of Plato that it is indispensable to take into account the order of his writings, because we may reasonably expect him to have progressed during his long life, and because between some of his dialogues there exist contradictions so important as to have led Socher and Schaarschmidt to doubt the authenticity of the Parmenides, Sophist, Politicus, and Philebus. If we wish to obtain a clear representation of Plato's logic we cannot follow Peipers in limiting our study to one dialogue; we must include in

ma dice solo che esse hanno realità in quel modo che possono averla, senza cessare di essere quello che sono, cioè idee . . . essenze, forme necessariamente possibili, cf. p. 79, ibidem), Th. Achelis ('Kritische Darstellung der platonischen Ideenlehre,' pp. 90-113 in vol. lxxix. of the Zeitschrift für Philosophie und philosophische Kritik, Halle 1881, accepts Lotze's view), August Auffarth (Die platonische Ideenlehre, Berlin 1883, develops the views of Cohen and credits Plato with the merit of having been the first representative of critical idealism), G. Schneider (Die platonische Metaphysik, Leipzig 1884, p. 54: 'Ideen sind ein eigenthümliches Besitzthum des menschlichen Geistes'), P. Shorey (De Platonis idearum doctrina atque mentis humanae notionibus commentatio, München 1884), F. Weber (Die Entstehung des Begriffes der Idee bei Platon, Brüx 1888), etc. This survey shows that the great majority of competent Platonists after Tennemann have abandoned the old theory of ideas as substances, and only Zeller, in dealing with this question as with many others, remains too conservative.

our examination all the dialogues where logical doctrines are found. These two conditions, (1) the distinction between the age of each dialogue and (2) the inclusion of all Plato's works in the study of each part of his philosophy, have never yet been fulfilled by those who have written upon this subject. The importance of these two conditions will appear in their true light when applied, but it is manifest that a scientific knowledge of Plato's logic is impossible unless we form our judgment at least upon all his more important works, and unless we know the stages through which his thought reached its final shape.

Zeller's objections.

Some objections to the aim of our study are raised by a scholar whose competence and command of Plato are incontestable, and whose opinion, therefore, should be well weighed before venturing upon a path condemned by Zeller agrees with van Heusde's opinion, according him. to which it is unjustifiable to form an artificial system of logic by collecting the logical theories which we find scattered through the philosopher's writings. If Zeller be right, all attempts to argue about Plato's logic are superfluous, and deserve no attention from historians of They are condemned beforehand on this philosophy. showing as a useless logical exercise that can lead to no scientific result. Zeller himself, in his extensive work on Plato, ignores Plato's logic as such, while he blends logical, ethical, metaphysical, psychological problems in accordance, as he thinks, with Plato's own indications. He begins with the theory of perception and imagination, then deals with virtue, with love, with the formation of concepts and their division; he treats in one page of the logical rules of Plato, and proceeds to the theory of language, of ideas, and of moral aims, then states Plato's views on matter, reason, and necessity, the world's soul, the world's beginning and the constitution of the stars, the soul's immortality and metempsychosis, the freedom of the will, the relation between body and soul, and so forth.

Now, although a reading of Zeller's work does not give the impression of discontinuity produced by the above enumeration, everybody who knows Plato understands at once that this order of matters selected by Zeller is his own invention and cannot be supported by Plato's authority, nor can it give a more faithful idea of Plato's philosophy than a systematic exposition. Zeller condemns Tennemann's work because he represented Plato's philosophy according to modern divisions, which, as Zeller thinks, led him into inaccuracies and induced him to attribute to Plato thoughts which were not his. Every other division of an exposition of Plato's philosophy leads to the same danger, and, if we wish to leave Plato's views unchanged by our systematic prejudice, the safest plan is to present Platonic philosophy in the form of a mere epitome of his dialogues. authors, in writing on the philosophy of Plato-as, for instance, Grote-have thus understood their task. But such analyses contain but the repetition of Plato's works; they give no new results. Even had Plato left a systematic work on logic we could not be bound by the order of his exposition in our historical account.

The aim of an investigation on the history of philo- Aim of the sophy is not to repeat or to epitomise what each history philosopher said in his works, for then the best history of philowould be a faithful edition of the chief texts. Our aim in investigating the logic of Plato is to learn what the philosopher thought, even though he gave no full expression to his thoughts. This constitutes the labour of the historian in all departments—to manifest a reality not fully given by any single witness, to draw inferences from facts, and in this way to produce new truths. In the history of philosophy we are expected to offer a better understanding of a philosopher's thoughts than could be immediately derived from the mere reading of his writings.

A philosopher, whom all must admit to be a com-

Historical method in philosophy. petent witness, Kant,70 recognised this possibility and explained it, pointing out that we may understand a philosopher better than he understood himself, just as by means of scientific method we understand the properties of any being better than they could be understood by the being itself. If we wish to gain a scientific knowledge of a plant or an animal, we seek to determine its chief properties and their interdependence. Then only do we obtain scientific knowledge, very much higher than any knowledge derived from external description. We seek to show by what properties a particular object is distinguished from all others and how these properties were developed. Taking a philosopher as an object of scientific study, we may ask many questions of no interest to him, and not directly answered in his writings. We need not repeat his mere words nor describe his writings, because all such descriptions teach us no more than the works themselves. We need not fear to join what is separated nor to sunder what is united in his works, if the sundering and joining be done upon a rational principle, and if the relative date of each expression of opinion be borne in mind.

Psychological evolution of a philosopher.

Our aim is to get an insight into the psychological evolution of our philosopher, though he nowhere mentions his evolution—though he disregarded his change of convictions and perhaps even attempted to conceal such changes. We seek the true meaning, the bases and consequences of his theories, though he may mention them only occasionally or may give no importance to them. We desire to trace the origin of what we admit to be important truths of our science, though, at the outset,

Nant's Kritik der reinen Vernunft, Riga 1787, p. 370: 'Ich merke nur an, dass es gar nichts Ungewöhnliches sei, sowohl im gemeinen Gespräch als in Schriften, durch die Vergleichung der Gedanken, welche ein Verfasser über seinen Gegenstand äussert, ihn sogar besser zu verstehen als er sich selbst verstand, indem er seinen Begriff nicht genugsam bestimmte, und dadurch bisweilen seiner eigenen Absicht entgegen redete oder auch dachte.'

they may not have been expressed with a full knowledge of their importance.

Just as the notion of a heavy body is other in ana- True lytical mechanics than in current talk, so the scientific knowledge knowledge of a philosopher differs from the first impression obtained by reading his works. Those historians who, when speaking of Plato, object to the use of the word logic, on the plea that this word was not reading used by him, do not write history: they merely collect of his Such historical writings always give the works. quotations. unprejudiced reader the impression of vain labour, of an unskilful repetition of texts. In investigating the history of human thought, our object is not only to ascertain facts, but to explain their causation. An historian of philosophy can do this better than the philosopher investigated, since he can make comparisons that are impossible to the philosopher himself. It is true that a certain subjective element enters into every historical study. We may suspect that Plato's idea of his logical system differed from the idea we form of it. But if our idea corresponds to the true meaning of Plato's thoughts, and if we attribute to him nothing against his testimony, then our appreciation of his system may be more trustworthy than his own. Possibly he did not always perceive the deeper connection between all his thoughts, but there is a bond uniting them, which gives the key to his detached opinions.

Thus Tennemann and Prantl understood their task, and though their knowledge of Plato's logic remained incomplete, there is a marked progress between the first and the second in eliminating the subjective element, though neither cared to preserve in his exposition the accidental order in which Plato's logical hints are found in his own dialogues. To admit beforehand that an historian must have some subjectivity is simpler than to persuade our readers that we take from Plato himself the systematic order which allows us fully to understand his logic.

of a philosopher not attained by mere

Logical questions subsidiary to other problems. Plato never professes to teach logic; he always introduces logical questions as subsidiary to psychological, metaphysical, and ethical problems. To understand his logic we must first determine the changes and the progress of his logical views; and this cannot be done without a careful investigation into the chronology of his dialogues.

The knowledge of the true order of Plato's dialogues indispensable for an appreciation of his logical development.

The majority of writers dealing with Platonic chronology had no special interest in his logic: those who were interested in his logic seem to have been unaware of the importance of the chronological distinctions. is our task to unite both aims, and to show how the study of Plato's logic yields definitive truths as to the chronological order of his writings, and how by the knowledge of this order we may obtain a deeper insight into his logical development. Compared with other philosophical sciences, logic has the privilege of steadier It is not uncommon to see changes in metaphysical convictions occurring in opposite directions-as, for instance, from pantheism to spiritualism, and from spiritualism to pantheism, from free will to necessity, and from necessity to free will. But it is inconceivable that a philosopher who had reached the stage of logical reflection should fall back into illogical dogmatism, or that anybody could forget or cease to apply logical methods once found and tested.

Plato was the first logician, and he produced two successive logical ' theories. Plato was the first thinker to appreciate the importance of logic,—not only to seek the truth, but to ask why the truth was true, and how it could safely be distinguished from error. He insisted throughout his works on the difference between knowledge and opinion, and attempted through more than one solution to fix the limits where knowledge begins. His first solution of that problem is known as the theory of ideas, and is generally believed to have remained his unique theory of knowledge. This belief is produced chiefly by the prejudice which prevented the great majority of readers from studying, with all the

attention they deserve, those dialogues which contain a new theory of knowledge, differing from the theory of ideas. Plato is chiefly known by his poetical masterpieces, the Banquet, the Phaedo, and the Republic. His dialectical dialogues, the Sophist, the Politicus, the Philebus, being more difficult to understand, have not been so widely The general assumption is that they were studied. written earlier than the poetical masterpieces, and that they are less noteworthy. It becomes of the first importance to solve this problem: whether the poetical logic of the Republic or the dialectical logic of the Sophist is the definitive teaching of Plato.

This is no mere historical question. The two conflicting views on logic are as opposed as ever. knowledge always exist? and is our acquisition of it only the discovery of pre-existing knowledge? Or is knowledge created by us, produced by our own exertions, not existent save in our own minds? The former hypothesis may be psychonamed idealistic, the latter psychological.

Plato and his great pupil Aristotle are generally counted among the idealists, notwithstanding many differences between them. The psychological view is a modern one, chiefly supported by Kant. If we could show that in his later age the father of idealism came near to psychologism, and that he had been misunderstood by his pupils and readers for two thousand years,—this discovery would change the general aspect of the history of logic.

It is worth while to grapple with tedious details in order to resolve such a decisive problem, of which the key is to be found in a previous solution of chronological difficulties. The order of the Platonic dialogues, though it has been discussed for a century, is by no means settled, and the best authorities on the subject differ. Zeller, who is generally esteemed the most competent authority on Plato, agrees with Hermann and Schleiermacher in placing the Sophist and the Politicus before the Republic and the

Poetical vision of eternal esebi opposed to the logical creation of knowledge.

has been generally counted among the idealists. though he progressed beyond

idealism in his latest works.

Banquet. Other investigators, unknown to each other, have accumulated evidence in support of the opposite view. Nobody has yet undertaken to piece together the small indications contained in these partial investigations, and to exhibit the result. Nor can this easily be done in the present volume with equal precision for all dialogues. But it belongs to our task to show the steady progress brought about by these minute investigations, and to discuss with due accuracy the date of the chief dialogues in order to decide whether Plato, as the outcome of his life's experience, bequeathed to mankind a merely poetical idealism, or the foundations of a theory of self-created science. Are the dialectical works mere juvenile jokes -a kind of school exercises, or are they the ultimate issue of mature thought? This is the chief question for an historian of Plato's logic.

The treatment of the chronological problem has heretofore been twofold—the comparative study of the contents of each dialogue, and the study of Plato's style. Our next task is to review the results obtained by both methods and to compare them with each other.

CHAPTER II

AUTHENTICITY AND CHRONOLOGY OF PLATO'S WRITINGS

It is commonly assumed that Tennemann was the first to deal with the problem of the Platonic chronology. Before the end of the sixteenth century, indeed, Patrizi⁷¹ wrote a chapter 'De dialogorum (sc. Platonis) ordine,' but he gave no scientific reasons for the order proposed. It was, like the strange order invented by Serranus,' rather an order of reading Plato's works than a guessing at the order in which Plato wrote them.

Tennemann 40 treats the chronology of Platonic dialogues without going into many details. But at least he guessed that the *Phaedrus*, of which he recognised the importance, could not, as had been supposed, belong to the earliest period of Plato. He puts the *Sophist* and the *Politicus* before the *Banquet*, and believes them to have been written in Megara, soon after the death of Socrates.

[&]quot;In F. Patritii Nova de universis philosophia libris quinquaginta comprehensa, Venetiis 1593 (the first edition at Ferrara 1591 is not in the British Museum) there is a part under the title 'Plato et Aristoteles mystici atque exoterici' with separate pagination, and fol. 44 begins a chapter 'de dialogorum ordine.' The order proposed is, with omission of some spurious dialogues: Alcibiades, Philebus, Euthydemus, Cratylus, Theaetetus, Sophistes, Politicus, Gorgias, Phaedrus, Banquet, Ion, Hippias, Protagoras, Meno, Laches, Menexenus, Charmides, Lysis, Republic, Timaeus, Critias, Parmenides, Euthyphro, Crito, Apologia, Phaedo, Laws.

⁷² Serranus translated Plato's text for the edition of Plato by Stephanus 1578, and he introduced the order, or rather disorder, which has been maintained in many editions of Plato, including the edition of Didot, Paris 1846–1856.

Tennemann and Schleiermacher

Tennemann had no such doubts concerning authenticity as the next eminent writer on that subject, Schleiermacher 73 (1804), who did not hesitate to pronounce many dialogues spurious, though they had previously been held by every reader for authentic. Some of these, not amounting in all to one-seventeenth of the texts bearing Plato's name, namely, Hipparchus, Minos. Alcibiades II., Theages, Amatores, Hippias major, Clitopho, Epinomis, have since been generally recognised either as spurious or as written by some pupil of Other dialogues condemned by Schleiermacher, as Hippias minor, Io, Alcibiades I., Menexenus, have been more recently defended against his suspicions, but they are of no importance for the study of Plato's philosophy, and they do not exceed, taken together, the volume of a single dialogue such as the Gorgias. In the great questions of the date of the Phaedrus and Parmenides, Schleiermacher chose the opposite solution to that of Tennemann: he believed the Phaedrus to be the first work of Plato, and the Parmenides also to have been written before or immediately after the death of Socrates.

agree as

points,
except the
date of the
Parmenides,
Phaedrus,
Phaedo,
Philebus,
Euthydemus,
Cratulus.

As to other dialogues, there are several important points in which Schleiermacher agreed with Tennemann: both place the Lysis, Laches, Charmides, Protagoras before the death of Socrates; both agree that the Euthyphro, Apology, Crito had been written about 399 B.C.; both put the Meno, Gorgias, Theaetetus, Sophist, and Politicus before the Banquet, which they both held to have been written about 385 B.C., as Wolf had shown in his introduction to the Banquet. Also in looking upon the Republic, Timaeus, Critias, and Laws as the latest works of Plato, Schleiermacher followed Tennemann's indications. He dissented from him chiefly as to the date of the Phaedrus and Parmenides, which he placed much earlier, and of

Platons Gastmahl, herausgegeben von F. A. Wolf, Leipzig 1782.

the Cratylus, Euthydemus, Philebus, and Phaedo, which appeared to him later than Tennemann had supposed them to be.

As to the smaller dialogues of doubtful authenticity and little philosophical importance, Schleiermacher recognised better than Tennemann the great difficulty of assigning to each of them a definite place in the general order of Plato's works. They have no influence on our judgment as to any serious aspect of Plato's philosophy, and their study belongs rather to literary investigations on the history of the Greek dialogue generally than to the history of human thought.

Schleiermacher tried to ascertain the sequence in which Schleier-Plato might have written his dialogues, if it were supposed macher that from the beginning he had planned out the whole of his literary activity. This starting-point in judging about chronological questions was suggested by the influence of the mode of German idealism, which prevailed tism to in the first years of the present century. According to criticism. such a view, a man's life is an harmonious whole, and a man's works must form a consequent exposition of his doctrines, taking the sum of these doctrines as co-existent in the author's mind before his entrance on a literary career. Schleiermacher had observed the didactic and dogmatic character of the Republic, and he believed that this alone gave sufficient reason for thinking that this work was written after the Sophist and the Politicus, which are rather critical than dogmatic. It is strange that Schleiermacher should not have profited in this regard by the example of Kant's evolution from dogmatism to criticism; he would then have been less confident in representing dogmatism as the latest stage of Plato's thought. It is true that Plato, as a disciple of Socrates, began with criticism. But there is a great difference between such criticisms as we see in the Protagoras or the Gorgias, which are of a personal character, dealing with simple ethical problems, and the

did not admit progress from dogmacriticism of the Sophist and the Politicus, directed not against persons, but against general errors to which human reason is naturally liable, and rising from a merely ethical to a metaphysical point of view.

There is greater force in the argument that the latest works might be expected to be more didactic than the earlier. But according to this standard the Parmenides, Sophist, and Politicus are found to be later than the Republic, because in them the leader of the conversation proceeds with less regard for the diverging opinions of his hearers than is shown by the Socrates of the Republic for the objections of Adeimantus and Glaucon, or by the Socrates of the Phaedo for those of Simmias and Cebes. Schleiermacher, while believing that Plato already during Socrates' lifetime developed his theory of ideas so far as it is shown in the Phaedrus, was guilty of a curious inconsistency in maintaining a Socratic stage of Plato's philosophy. reckoned as monuments of this Socratic stage precisely those dialogues which have been also by all later historians called Socratic: the Protagoras, Laches, Charmides, Lysis, as well as the Euthyphro, Apology, and Crito.

Ast exaggerates the fundamental inconsequence of Schleiermacher. This inconsequence of Schleiermacher was noticed by Ast 75 (1816), who simplified the problem by proclaiming as spurious all merely Socratic dialogues except the *Protagoras*. He followed Schleiermacher in his worst error as to the date of the *Phaedrus*, while he wrongly dissented from him as to the date of the *Gorgias* and *Phaedo*, which he believed with Tennemann to have been written about the time of Socrates' death.

In order to sustain the high opinion of Plato's great literary power, Ast denied the authenticity of twenty-one dialogues attributed to Plato, amounting to more than two-fifths of the matter bearing Plato's name. This was the final consequence of seeking in Plato's works an harmonious whole, without recognising that even the

⁷⁸ Friedrich Ast, Platons Leben und Schriften, Leipzig 1816.

greatest writer must undergo a certain mental development, and may not have continued to think at eighty what he thought at twenty.

The view of a gradual evolution of Plato's thought was First proclaimed by J. Socher 76 some years after the completion of Ast's work. Socher (1820) did not pretend to fix the date of each dialogue; he only attempted to distinguish four successive stages of Plato's thought. He did not venture to impugn the authority of Tennemann, Schleiermacher, and Ast by attributing the Parmenides, Sophist, and Politicus to Plato's old age; but, perceiving the difference between these dialogues and others that were probably written soon after Socrates' death, he denied their authenticity, at the same time re-affirming the authenticity of a dozen other dialogues which had been held to be spurious by Ast. As to the chief dialogues, whose authenticity was unquestioned. Socher agrees with Ast, Schleiermacher, and Tennemann in placing the Republic after the Philebus and immediately before the Timaeus and Critias; but he differs from them in so far as he believes the Protagoras to have been written after the death of Socrates, and he returns, against Schleiermacher and Ast, to Tennemann's opinion in favour of a later date for the Phaedrus. These results of the first attempt to treat Plato psychologically are not to be despised if we take into account that the date of the Phaedrus is of the greatest importance, and that critics are still found who maintain that 'youthfulness' of this dialogue, so confidently affirmed by Schleiermacher.

attempt of genetic explication by Socher.

This fancied youthfulness of the Phaedrus was, developed however, also opposed by Stallbaum, who spent his life by Stallin an original study of Plato. Stallbaum 77 followed baum. Tennemann in putting the Euthydemus, Protagoras,

⁷⁶ J. Socher, Ueber Platons Schriften, München 1820.

¹¹ Platonis dialogos selectos rec. G. Stallbaum. vol. i., Gothae et Erfordiae 1827. See also the introductions to the single dialogues frequently edited by Stallbaum.

Cratylus, Charmides, Laches, Lysis before the death of Socrates, the Euthyphro, Apology, Crito about 399, the Theaetetus, Sophist, Politicus, and Parmenides between the death of Socrates and the founding of the Academy, the Republic very late, immediately preceding the Timaeus. Against Tennemann and Ast he accepted Schleiermacher's view that the Phaedo and Philebus were written after the Banquet.

H. Ritter.

A like eclectic method was followed by H. Ritter ⁷⁸ (1838), in whose opinion the *Phaedrus* and *Protagoras* were the earliest works of Plato, and therefore older than the *Apology*, *Crito*, and *Phaedo*. He dissented from Schleiermacher chiefly in placing the *Parmenides* after Socrates' death, and the *Phaedo* and *Philebus* before the *Banquet*.

Hermann established the Socratic stage of Plato's philosophy,

A fresh start in the study of the chronology and authenticity of the Platonic Canon was made by K. F. Hermann 79 (1839), who tried to find in Plato's genuine dialogues a steady progress at once with respect to philosophical contents and to literary perfection. His method, very different from the method of Schleiermacher and Ast, led him to results which, in some particulars, corrected the most glaring errors of his predecessors. The imperfection of some lesser works, which had been declared by Ast to be spurious and unworthy of Plato, was explained by Hermann's admission that the genius of Plato could not reach its full height in the first years of his literary activity. Hermann succeeded in demonstrating to every unprejudiced reader the absurdity of ascribing such masterpieces as the Phaedrus and the Parmenides to a young Athenian of about twenty-five years of age, who even at thirty could do no better than the Euthuphro, the Apology, and the Crito. Hermann ascribed to Plato's

⁷⁸ H. Ritter, Geschichte der Philosophie alter Zeit, Hamburg 1886-1888, vol. ii. pp. 159-522, on Plato.

⁷⁰ K. F. Hermann, Geschichts und System der platonischen Philosophie, Heidelberg 1839, only vol. i. published.

preliminary stage some small dialogues, such as the Hippias minor, Io, Alcibiades I., which Schleiermacher suspected to have been written by Plato's pupils. added to these the Charmides, Lysis, Laches, Protagoras, which Schleiermacher had also placed before the death of Socrates. The Euthydemus, Meno, and Gorgias, placed by Schleiermacher near the Theaetetus, were thought by Hermann to belong to the time of the Apology, Crito, and Euthyphro. But in this he betrayed inconsistency, because these dialogues are in all respects riper in thought than the trilogy on the death of Socrates.

The second period, according to Hermann, produced but he the Cratylus, the Theaetetus, the Sophist, and the Politicus, also the Parmenides, and following these after a short interval came the Phaedrus and the Menexenus. Hermann and Schleiermacher agreed as to the chronology of all the dialogues that were held by them to be later than the Banquet, viz. the Phaedo, Philebus, Republic, Timaeus, Critias. and Laws. It passed almost unnoticed that Hermann's view as to the order of Platonic dialogues did not differ essentially from Stallbaum's; at least, as regards the chief works of Plato, beginning with the Theaetetus, they agree completely; and this coincidence is the more remarkable since the Theaetetus and the twelve dialogues which, according to Stallbaum and Hermann, are later Banquet. (the Sophist, Politicus, Parmenides, Phaedrus, Menexenus, Banquet, Phaedo, Philebus, Republic, Timaeus, Critias, Laws), form over seven-tenths of the volume of the twenty-eight dialogues which Hermann held to be authentic. Hence we may regard the chief common results of Hermann and Stallbaum as the best obtainable by their method.

Their partial agreement with Schleiermacher, and even with Ast and Socher, gives them an appearance of scientific objectivity which commands rational assent. On the other side, as later investigations have shown, all these

agrees with Stallbaum and with Schleiermacher as to the dialectic dialogues, and as to all dialogues later than

The common stock of Schleiermacher.

Stallbaum, and Hermann based on an error: the so-called Megaric period in Plato's life. authors are wrong in the most important point, namely in their assumption that Plato wrote, or began to write, in Megara soon after the death of Socrates, his trilogy consisting of the *Theaetetus*, the *Sophist*, and the *Politicus*.

If we inquire into the origin of this error we shall understand why the method of Hermann, as well as that of his predecessors, was insufficient, notwithstanding the more plausible nature of the assumptions on which it was based. The advance made by Hermann consists in his having recognised the impossibility of reckoning the *Phaedrus* and the *Parmenides* among the 'Socratic' dialogues. But the old error of placing the dialectical trilogy soon after the death of Socrates is shared by Hermann with all his predecessors.

First origin of this old error.

It is interesting to observe how this error originated and grew in strength until it seemed almost an acknowledged certainty. It already appears in the old tetralogic order of the dialogues, which is retained in nearly all manuscripts of Plato's text, and was probably due to According to this order, the Plato's first successors. Theaetetus trilogy is paired with an evidently early dialogue, the Cratulus, and placed immediately after the first tetralogy which contains the details of the death of Socrates. We know nothing of the reasons which led to this order, and probably the editor who first arranged Plato's dialogues in tetralogies was less interested in Platonic chronology than we are now. He may have grouped together those dialogues which, to a superficial judgment, might be considered as treating of the same subject, or were united by Plato himself as continuing one another. From a similar point of view Patrizi placed the Theaetetus trilogy before the Banquet and Phaedrus. Tennemann invented more elaborate reasons for such an early date of these three dialogues. His judgment was determined by the purely external circumstance that at the end of the Theaetetus the Platonic Socrates mentions the accusation of Meletus. Thence Tennemann infers

Patrizi gives no reasons. Tenne-

mann identifies too much that this dialogue, since it seems to record one of the last days of Socrates' life, must have been written shortly after his death. It is the same fallacy which led him to assign an early date to the Phaedo. Such an argument is built on a simple possibility which is not even a probability. It has been often repeated since Tennemann by those who identify the Platonic Socrates with the historic Socrates, and take Plato's poetical fiction for literal truth. Like Patrizi, they look upon Plato as a man whose merit lay in writing down what he had heard from Socrates. The absurdity of such a view becomes evident to any one who impartially compares Xenophon's Memorabilia with Plato's dialogues. Tennemann himself felt that a mention of Socrates' accusation at the end of a dialogue afforded no ground for chronological inferences as to the date of the composition of that dialogue, and he cautiously added another supposition, that Plato wrote the Theaetetus, 'perhaps at the time when he dwelt with Euclides at Megara.'

Platonic Socrates with the historic Socrates.

Now, the fact of a residence of Plato in Megara is by no means certain, and Tennemann's belief in it was based on no valid historical testimony. He quotes Diogenes Diogenes Laertius as his authority. This author says: (II. 106) πρὸς τοῦτόν (sc. Euclides of Megara) φησιν ὁ Ἑρμόδωρος άφικέσθαι Πλάτωνα καλ τούς λοιπούς φιλοσόφους μετά την τοῦ Σωκράτους τελευτήν, δείσαντας τὴν ἀμότητα τῶν Elsewhere he states the same thing in fewer words: γενόμενος όκτω και είκοσιν έτων είς Μέγαρα πρός Εύκλείδην σύν καὶ ἄλλοις τισὶ Σωκρατικοῖς ὑπεχώρησεν (III. 6). Obviously Hermodorus was of opinion that, at the time when some pupils of Socrates, fearing a fate like their master's, fled to Euclides in Megara, Plato joined This is given, not as an unquestioned fact, but as Interprean opinion of Hermodorus. Were we sure that this tation of Hermodorus was that same whom Cicero and Suidas the alleged mention as Plato's pupil who spread his writings through Sicily, this witness would be discredited by his ignorance

authority.

testimony.

of well-known facts. For it was not the 'tyrants' whom Plato had to dread, but the democracy as revived after the expulsion of the Thirty. On authority so shadowy we need not believe that the author of the Crito thus fled to another city as fearing the anger of the mob. Even were the fact so far admitted, it would not follow that his sojourn at Megara was long enough for the composition of three dialogues in which so much of his cardinal thinking is condensed. But at the outset the story is suspicious, because of the mention of the tyrants and of an improbable danger. If others had to fear anything, this was less probable of Plato, as nephew of Critias, and belonging to an influential family. And Plato's flight to Megara is contradicted by a witness perfectly trustworthy in such things, and quite competent as to the history of Plato's life. Cicero (De rep. I. x. 16) says 'audisse te credo Platonem Socrate mortuo primum in Aegyptum discendi causa, post in Italiam et in Siciliam contendisse ut Pythagorae inventa perdisceret.'

Plato had no necessity to go to Megara or to remain there.

The silence of Cicero.

In this passage Cicero enumerates all the travels of Plato, and there was no reason for omitting his journey to Megara, had he known of it, or had he thought of Euclides as one who had influenced the philosophy of Plato. Cicero quotes Egypt as the first place whereto Plato travelled after the death of Socrates, then we may assume that Cicero at least knew nothing of that Megaric period in Plato's life which is to-day generally admitted on the authority of a witness much less trustworthy than Cicero. Again, far from suggesting that Plato was indebted to Megaric influence, Cicero says that the Megaric school owes much to Plato (Academica II. 42 § 129).

The trustworthiness of Cicero has been frequently questioned in matters of philosophy, and no great importance attaches to his testimony in a question of Platonic doctrine. But in matters of fact, recent intestimony vestigations have shown more clearly than ever that

Cicero's

Cicero's judgment as to the date of the Phaedrus was sounder than Schleiermacher's and Ast's. He was interested in Plato's life, he had visited the Academy; and in a passage where he clearly intends to convey the impression that change of place and study are important to the philosopher, he could not have left unmentioned the Megaric period of Plato's life, had he heard anything of it, and had this Megaric period been of such importance in Plato's life as Tennemann thought. Megara is. according to our present notions of distance, very near Athens, but we must not forget that it belonged to another republic, sometimes at war with the Athenians, life. and could only be approached from Attica by sea or by a mountainous road. Plato's journey thither should have been included in the enumeration of Cicero, especially if, as Ast supposes, it led to a residence of several years. Cicero often alludes to Plato's travels and Plato's teachers: he never mentions Euclides among the latter, nor Plato's emigration to Megara after Socrates' death. Arguments from silence have been frequently abused; but, in this particular case, the silence of Cicero, and his unvarying omission of Megara when speaking of Plato's voyages, is surely significant. It would prove nothing had Cicero not indicated Egypt as the first place to which Plato travelled after his master's death. This circumstance confirms the presumption raised by the weakness of the evidence on which Tennemann's acceptance of Plato's residence in Megara is founded.

Tennemann was cautious; he introduced his supposi- How the tion with a 'perhaps.' This 'perhaps' has been dropped myth of by Schleiermacher without producing any new argument the in favour of the probability of a residence of Plato in Megara (p. 20, part 2, vol. i.). Schleiermacher speaks of Plato's flight ('Flucht,' p. 103, part 1, vol. ii.) to Megara as a well-established fact, without even the formality tradition of quoting Diogenes Laertius. But he shows modera- by mere tion in so far as he limits Plato's literary production repetition.

as to the date of the Phaedrus has been so well confirmed. that we can believe him trustworthy as to facts of Plato's

> Megaric period grew, and became a

in Megara to the Parmenides, leaving the Theaetetus, Sophist, and Politicus for a later time. He thus deprives the story of the plausibility which it might otherwise receive from the preface to the Theaetetus. Ast, on the other hand, boldly declares that the Theaetetus was 'undoubtedly' written in Megara (p. 185), and this notwithstanding his admission that the mention of the Corinthian war (Theaetetus 142 A) refers to a date seven or eight years later than the death of Socrates. Hence Ast accepts as an historical fact that Plato lived at Megara for seven or eight years, and is unaware that even the presence of Plato in Megara shortly after 399 is uncertain. For him it is decisive that the introductory conversation between Euclides and Terpsion is represented by Plato as occurring in Megara. He seems to believe that a dialogue alleged to take place in Megara must have been written there, as if Plato had need to reside in Phlius in order to write the Phaedo, or in Crete while he wrote the Laws. And he does not limit this special connection with Megara to the Theaetetus; he extends it to the Sophist and Politicus (p. 234) which, according to him, are really, as they profess to be, mere continuations of the Theaetetus. He does not go so far as to say that the Politicus was also undoubtedly written in Megara, but he sees in the dialectic of this dialogue a Megaric influence.

Stallbaum popularised it in his edition. Stallbaum also admitted without hesitation that Plato lived at Megara after the death of Socrates, that Euclides had a great influence on his theory of ideas, and that the plan of the *Theaetetus*, *Sophist*, and *Parmenides* was sketched during Plato's residence in Megara. In his introduction to the *Theaetetus* ⁸⁰ Stallbaum feels bound to give reasons for this view, but his reasons add nothing to the feeble arguments of Ast and Schleiermacher. We

[⇒] Platonis Theaetetus, rec. G. Stallbaum, Gothae et Erfordiae 1889, Prolegomena, p. 8: 'Theaeteti, Sophistae et Parmenidis scribendi consilium subnatum esse videtur, quo tempore Megaris sit commoratus.'

observe here the birth and growth of one of these myths, which, like tales of the sea-serpent, are repeated because nobody takes the trouble to examine their source. Plato, according to Stallbaum, had no reason for introducing Euclides in the Theaetetus, and for representing the dialogue as having been held at Megara, apart from his personal residence in Megara.

After Stallbaum the myth of a Megaric period in Plato's life, and of the Megaric influence in the Theaetetus, Sophist, Politicus became generally received, though nobody found the smallest evidence on its behalf. Ritter, in his History of Philosophy, accepts the legend as a matter of course. Hermann (p. 52) quotes Cicero as Hermann the 'oldest witness' to Plato's travels; but he does not did not notice the omission of Megara among the places mentioned by him, and he relies, like his predecessors, on Diogenes Laertius as to the asserted residence in Hermann has no other authority to quote in favour of Plato's residence at Megara than the above passages from Diogenes Laertius: still. he believes (p. 490) that the time spent by Plato in Megara was one of the 'most important periods' in the philosopher's life: as it would be, had he produced there such considerable works.

even discuss any possible doubts.

If we ask how these eminent students of Plato could invent facts and give them out for a part of the history of Plato's life, we recognise the same proceeding which led Bekker and Stallbaum to some alterations of Plato's text. These editors, if a passage was obscure, and if they found in some manuscript a more plausible reading, did not ask very much about the origin esthetical of that manuscript: they corrected the text, in the belief that Plato could never have written otherwise than according to the most ingenious suggestions of one of his copyists. Only with the Zurich edition a new method of editing Plato's text was first proposed, and it was developed by Hermann and Schanz. According to this method, logy.

Analogy between old method of dealing with texts and the considerations reigning in the biographical mytho-

the chief point is to know which among the many manuscripts are really trustworthy, and the most obscure reading of a trustworthy manuscript, if it has some meaning, is preferred to the most elegant and plausible reading of an untrustworthy manuscript, even if this last reading gave Plato credit for more artistic skill than the first. This progress in editing Plato's text, to which Hermann contributed in a very important degree, was not extended by him to the method of writing Plato's life and the history of his works. Here he continued to prefer ingenious hypothesis to careful weighing of the evidence. It was an ingenious hypothesis to explain some of the most original works of Plato by the Megaric influence. The truth, that these original works—so different from everything Plato had written—were a product of a radical change of opinion in the philosopher's old age, was not so ingenious and did not agree with the boundless admiration professed for Plato's perfection.

Truth
about dialectical
dialogues
was esthetically unpleasant.

The aim of an harmonious conception of Plato's life originated the error.

The theory of ideas, as professed in the Republic, was poetically beautiful. It was united to Plato's name all over the world, even by those who only knew of Plato that he had imagined a theory of ideas. It gave a better esthetic impression to say that those dialogues, in which, instead of poetical ideas, we find only abstract notions of pure reason, were a preparatory introduction to the Republic than to admit that they were written after the Republic, and that they condemned the most popular of Platonic theories, almost Platonism itself. Thus all the above writers from Tennemann to Hermann were led by an esthetic desire to have an harmonious representation of Plato's life, just as earlier editors of Plato's text were anxious rather to read the best and most beautiful text that Plato might have written than the text most probably written by Plato. They thought that any representation of Plato's development, based on whatever ancient evidence, was likely to be true if it agreed with the leading hypothesis which was their starting point. The leading hypothesis for Schleiermacher was a systematic interdependence of all works of Plato, each preparing for the next and prepared by the preceding. For Ast it was the esthetical perfection which Plato, according to him, sought above everything and could always produce. For Hermann it was the author's development from Socratism to the Platonism of the Republic. The superficial connection of the Republic with the Timaeus made the Republic appear as a sample of Plato's most mature thought, and every dialogue of different tendency had to be placed earlier.

If we wish to know what Plato really was and how he Logical became what he was, we must get rid of esthetical pre-dealing judice, and look only at the evidential value of the testi- with testimonies we are dealing with. We must know all the facts and distinguish them from personal opinions on those facts. Plato's residence in Megara is not a fact. It is a myth, founded upon a most uncertain tradition, that some of Socrates' disciples fled to Megara after the Master's death. This tradition reaches us through a single witness, and is nowhere confirmed by other witnesses whom we might expect to know it. It is contradictory to what we know of Plato's personal character from his own writings. If we have recourse to hypothetical argument, the hypothesis that a philosopher like Plato acted according to his philosophical principles is much more probable than the hypothesis that Hermodorus was right in accusing Plato of cowardice. On the other hand there is no reason whatever for building upon the testimony of a single untrustworthy witness a theory as

Hermann himself recognises (p. 106, note 82) that the Both Herabove quoted passages from Diogenes Laertius are the only mann and source of the tradition of Plato's emigration to Megara, and he adds with the greatest simplicity that these passages betray such a want of knowledge about Plato that they deserve no confidence as to the date of the cists than journey to Megara. He means that this may have logicians.

to the Megaric influence on Plato's life.

monies different.

Schleiermacher were more occurred some years later. But if he does not trust his only authority as to the date of this removal, why trust it as to the place whither Plato first travelled after leaving Athens? Manifestly he selects the testimonies, not according to their historical value, but according to the esthetical impression they produced on him. He liked the idea that the dialectical dialogues were inspired by the Megarics; he disliked esthetically the idea that these dialogues were the result of a change of opinion in Plato after his artistic masterpiece, the Republic. Brandis ⁸¹ (1844) and Ribbing ⁸² followed Schleiermacher, with the difference that they put the Parmenides after Socrates' death. Hermann was followed with slight differences by Schwegler, ⁸³ Steinhart, ⁸⁴ Michelis, ⁸⁵ and Mistriotes. ⁸⁶

Their followers.

Strange merit of Suckow Suckow ⁸⁷ (1855) wrote under a misleading title a large commentary on the *Phaedrus*, preceded by a dissertation on the authenticity of other dialogues. This work, though written under the influence of a strange prejudice, which led the author to reject the authenticity of such important works as the *Politicus*, *Critias*, and *Laws*, contains a curious exemplification of the truth, that a wrong method may sometimes lead to correct results. Suckow, being unable to understand that no author can bind himself for

life by rules which he has laid down in one of his works. believed that Plato, after having placed in the *Phaedrus* the philosopher above the lawgiver, could never degrade himself to writing the Laws; he took as a sign of authenticity consuch a superficial distinction as the number of chief parts trasted and their subdivisions, believing that Plato would write all his life and on all subjects according to the same formal plans. He sought the key of our problem of the order of the Platonic writings in a fragment of the old 'Introduction to Plato' by Albinus, who advised the reader to begin with the Alcibiades and Phaedrus. After such tiresome rubbish, extended over more than 500 pages, Suckow suddenly gives in a few words his opinion on the order of Plato's dialogues, according to which Plato's aim was to give an ideal biography of Socrates; and we learn that he considered the following order as the most probable: Parmenides, Protagoras, Symposium, Phaedrus, Republic, Timaeus, Philebus, Theaetetus, Sophist, Apology, This order, radically different from anyand Phaedo. thing proposed before, implies the first positive recognition of an important truth, unknown to all previous inquirers, namely that the Theaetetus, Sophist, and Philebus are later than the Republic. Unhappily, Suckow did not fulfil his promise of giving ampler reasons for this opinion. Judging from his book, and from a small dissertation on the Parmenides written by him thirty-two years before (1823), he was unable to give good reasons and consistent arguments; but, at all events, we must recognise his merit in proclaiming for the first time, amidst a heap of errors, a truth of the greatest importance for the understanding of Plato's philosophy. He quotes Morgenstern and Tchórzewski, who advocated an early date of the Republic on account of its supposed relation to the Ecclesiazusae of Aristophanes.88

with his want of judgment.

The order proposed by Suckow was substantially the Munk

satisfactory
reasons for
his admission of the
late date
of the dialectical
dialogues. same as that which shortly afterwards was sustained by Munk.89 with the difference that Munk extended it to a greater number of dialogues, adding after the Protagoras: Charmides, Laches, Gorgias, Ion, Hippias, Cratylus, Euthydemus; after the Timaeus: Critias and Meno; after the Sophist: the Politicus and Euthyphro; after the Apology: the Crito, and putting the Philebus immediately before the Republic, while Suckow had placed this dialogue after the Republic and Timaeus. Munk was less reticent than Suckow as to the reasons which decided him to adopt an order so very different from the conclusions which were common to Schleiermacher and He argued that Plato's chief aim in writing Hermann. his dialogues was to give an extensive biography of Socrates, so that each dialogue had its place assigned according to the apparent age of Socrates at the supposed date of the dialogue. The Theaetetus, from this point of view, should be later than the Republic, chiefly because in this dialogue Socrates is represented as older than in the Republic. On this ground Munk was obliged to look upon the Phaedo as the last work of Plato for the mere reason that it represented the death of Socrates. may be remembered that for the same reason it has been affirmed to be his earliest work.

Such conclusions illustrate the uselessness of all generalisations, leading to a fictitious solution of the problem of Platonic chronology by a single ingenious hypothesis. The true genetic method should include a careful study of detail, with many parallel comparisons between every dialogue and those immediately preceding or immediately following. Such a painstaking inquiry, without prejudice, without a general formula for the whole of Plato's literary activity, was first attempted by Susemihl in a work which deserves very great consideration for its method, though it did not avoid some old errors.

Susemihl first attempted to free himself from

E. Munk, Die natürliche Ordnung der platonischen Schriften, Berlin 1856.

Susemihl (I. 286, 477) recognised that the testimony of esthetical Diogenes Laertius about a retreat of Plato to Megara prejudice immediately after the death of Socrates was of no value. though he still retained, on no better evidence, the tradition of a Megaric period, coinciding with the composition of the Euthydemus and Cratylus. But he does not show such confidence as Hermann, and he admits that the Sophist and Politicus were written at least a dozen years after Socrates' death, though before the Banquet and Republic.

as to the order of Plato's dialogues.

The order of those dialogues supposed to be later than but he the Banquet was the same for Susemihl as it had been for Schleiermacher, Stallbaum, and Hermann. But he came nearer to the truth than his predecessors as to the place of the Phaedrus, which he puts next to the Theaetetus, Hermann. an arrangement which has been confirmed by many later investigations. He accepted Hermann's view that the Parmenides followed the Politicus, and Schleiermacher's as to the connection of the Euthydemus with the Cratulus. He differs from both by assuming (with Socher and Stallbaum) a very early date for the Meno, which he supposed to have been written before the death of Socrates.

still agrees in many points

Though the question of the chronology of Plato's Only writings had been raised by an historian of philosophy (Tennemann), and for the sake of a philosophical understanding of Plato's theories, we see from the above survey of subsequent writers on that subject, that up to 1860 it was a problem dealt with chiefly by philologers, and, according to philological traditions, from a philological- late date esthetic point of view. Though Schleiermacher, chiefly of the disa theologian, enjoys in Germany a certain philosophical lectical reputation, he approached our problem as a translator of dialogues, Plato's works, and translation is a philological business. Stallbaum, Hermann, Susemihl gave their lives mostly to philological work; even Ast, though he published some philosophical handbooks, cannot be called a philosopher,

Ueberweg gave strong logical

and the few philosophers who wrote about Platonic chronology in the first half of the nineteenth century generally accepted without criticism the verdict of one or other of the philologers. Now it happened for the first time about 1860 that a philosopher, who was chiefly a logician, set himself to investigate the question of the order of Plato's dialogues. The opportunity for this had been given by the Academy of Sciences of Vienna, which offered a prize for a new investigation as to the authenticity and chronology of Plato's works. was awarded to Friedrich Ueberweg, then a teacher of philosophy in the University of Bonn, and author of a Logic later known throughout the philosophical world, as well as his next handbook on the History of Philosophy. This was the first attempt of a logician to understand Plato better than his philological interpreters, and the result has shown ever since that good logical training, and a perfecting of previous methods, are the surest means for attaining real progress in the knowledge of Plato's mental development. Ueberweg did not pretend to give a general theory concerning the order of Plato's works, nor did he take into consideration all these works; but he proceeded with such excellent method that he succeeded for the first time in supporting by valid argument the late date of the Theaetetus, Sophist, and Politicus, already affirmed by Suckow and Munk on insufficient Some years before, in his dissertation on the Soul of the World ('Ueber die platonische Weltseele,' Rheinisches Museum 1853, Vol. ix. pp. 37-84), he had incidentally anticipated this opinion (p. 70, note 35); but it is only in his Untersuchungen über die Echtheit und Zeitfolge Platonischer Schriften, published at Vienna in 1861, that for the first time we find a strong logical argument in favour of the very late date of the Sophist, the Politicus, and the Philebus, showing their affinity with the Timaeus and that form of the Platonic doctrine which is known from Aristotle to be the latest. Besides,

comparing them with the Timaeus and Plato's later doctrine as known from Aristotle.

Ueberweg called attention to certain characteristic marks of these dialogues, which make their late appearance probable. A 'younger Socrates' is introduced, whom we know from Aristotle (Metaphysic, vii. 1036 b 25) to have been Plato's pupil when Aristotle belonged to the Academy: that is, within twenty years of Plato's death. Also the person of the elder Socrates as represented in the Sophist and Politicus is very different from the character attributed to him in the Republic; he is now no longer the leader of the conversation, but only a witness of the teaching of an unnamed foreigner, the 'Eleatic guest.'

This transformation of Socrates is common to the Charac-Sophist, Politicus, and Parmenides, with the Timaeus, known to be a late work-later, at all events, than the Republic. It is shown to be probable on artistic grounds that Plato, when he began to teach a doctrine differing greatly from what he had placed in Socrates' mouth in from earlier times, felt it inconvenient to credit Socrates with what they the new teaching. He chose other persons, named or were in unnamed: first Parmenides, then an Eleatic Stranger, later Timaeus, Critias, and Hermocrates, finally the Athenian Stranger in the Laws, to represent the author's views. Ueberweg also noticed that the Sophist and the Politicus resemble the Timaeus and the Laws in the absence of the dramatic action so characteristic of the Republic and earlier dialogues. All these hints taken together constitute a strong plea in favour of the supposition that the Sophist and Politicus belong to the same period of Plato's life as the Timaeus and the Laws. The same remark applies to the Parmenides, in which Ueberweg also found many indications of a later time, so much so that he believed this dialogue to have been written after Plato's death by one of his pupils. Ueberweg collected many historical indications from Plato's works as well as from other witnesses to show the limits of time within which many dialogues were written. compared metaphysical, psychological, and ethical theories,

teristics of Socrates different in these dialogues earlier writings.

and found in these comparisons a confirmation of the late date of the *Sophist* and *Politicus*, while he had less confidence in assuming a very late date for the *Phaedo*.

Schaarschmidt's doubtsand Chaignet's and Grote's confidence reduced by Jowett to a just measure by returning to Schleiermacher's and Hermann's tests.

Ueberweg's doubts as to the authenticity of the Parmenides were soon afterwards extended to the Sophist and Politicus, as well as to many other dialogues, by Schaarschmidt,90 who left unattacked only nine out of thirty-five works of Plato, while at about the same time Grote,91 and after him Chaignet, 91 defended the authenticity even of those dialogues which since Schleiermacher have been almost unanimously held for spurious. Jowett 91 reduced these extremes of scepticism on one side and over-confidence on the other to a just measure. Returning to Schleiermacher's verdict as to the authenticity, and rejecting only an insignificant part of the traditional text of Plato, he accepted as authentic all the works of real import-Though Jowett placed the Sophist and Politicus after the Republic in his translation, and though he refers to them (and in his last edition also to the Philebus) as late dialogues, showing upon many occasions their affinity with the Laws, he strangely enough protests against every supposition of a change in the fundamental doctrines of Plato, and he invokes against Jackson the authority of Zeller, a position which seems hard to reconcile with his own admission—that the Sophist and Philebus belong to Plato's old age.

Other philosophers, After Ueberweg, the philosophical importance of the chronology of Plato's dialogues began to be generally recognised, and we see this problem taken over from the philologers by philosophers. Later on, under Schaar-

schmidt's influence, Ueberweg himself came to doubt the authenticity of the dialectical dialogues. But an Italian philosopher, Felice Tocco,92 fourteen years after Ueberweg's publication supplemented his arguments in favour of the late date of the Sophist and Philebus, defending also the authenticity and equally late date of the Par- wee's menides on account of the modification of Plato's philo- work. sophical doctrines in these dialogues, attributed by Tocco to Pythagorean influence and coinciding with Aristotle's testimony.

ав Тоссо. Teichmuller, Peipers. continued Ueber-

Other philosophers became interested in the problem, Teichand sought new arguments by detailed observation, thus dividing the general problem into as many special problems as there are separate works of Plato. Ueberweg's method of fixing what we may know about the date of each dialogue, without prejudging the general plan of all the dialogues, has been developed in an original manner by Teichmüller,93 who claimed to have been the first to give a clear vations definition of the literary character of Platonic dialogues. He looked upon them as polemical tracts, and thought that Plato's aim was to ridicule his enemies and to increase the repute of his school. As such literary foes Teichmüller quotes besides Isocrates, in whose relation to Plato Spengel 93 had already seen some indications for sumption. Platonic chronology, also Xenophon, Lysias, and even Aristotle. He further sees in Plato's dialogues polemical digressions referring to Antisthenes, Aristophanes, Aristippus, Democritus, and other contemporaries not named by Plato. Many allusions thus conjectured by Teichmüller are of some probability, and his works are a mine of valuable suggestions for the student of Plato. Teichmüller's merit is further enhanced by his rare know-

müller sees in Plato chiefly a controversialist, but his obserremain valuable independently of his fundamental as-

He displayed a better knowledge of foreign literature on the subject, and had a very clear form of exposition.

ledge of English, French, and Italian literature on Plato, which had never before been taken so much into consideration by German scholars. And the form of his work makes it still more useful. He has learnt from English writers how indispensable it is to supply the reader with good indices, and his indices make it easy to find at once in his many volumes on Plato what one wants; while it is exceedingly difficult to find a required passage in the volumes of Schleiermacher, Ast, van Heusde, Hermann, Susemihl, and even Ueberweg, none of whom understood the necessity and usefulness of a good alphabetical index in a work containing a mass of various information. In his own country Teichmüller has not been appreciated according to his merits, because he met with a prejudiced critic in Zeller, who reigns as an authority on Plato in Germany. But English, French, and Italian scholars have recognised his great skill and acute judgment, and since his death he has also risen in the opinion of his own countrymen. He was a violent polemical writer himself, and this led him to generalise the polemical digressions found in Plato, and to see in the greatest thinker of humanity a controversialist full of vanity and personal ambition. Such a view of Plato as a general explanation of his literary activity is even more erroneous than the broad assumptions of Schleiermacher and Hermann. But the scattered polemical allusions discovered by Teichmüller lose no importance as chronological indications, even though we admit them to be only of secondary importance in the writer's mind.

From his original point of view Teichmüller gave an independent confir-

It is significant that Teichmüller, a good logician like Ueberweg, should confirm Ueberweg's conclusions as to the date of the dialectical dialogues. He recognised that the Parmenides, Sophist, and Politicus belong to the same epoch as the Timaeus and the Laws. Some other conclusions of Teichmüller, such as his very late date of the Gorgias (375 B.C.) and Meno (383 B.C.), are more questionable. Teichmüller dissented from all his predecessors in

his assumption of a very late date for some so-called mation of Socratic dialogues — the Euthyphro, Apology, Cratylus,—which he believed to have been written after the Theaetetus. But this opinion, which he advanced chiefly on philological grounds, is less important in its bearing on the question of Plato's philosophical development; while it is of the greatest importance to see how Teichmüller's investigation confirmed Ueberweg's first attempts to prove the late date of the dialectical dialogues.

Another philosopher who after Teichmüller undertook Also our problem, Peipers, 94 reached the same conclusions by careful comparison of the ontological theories expressed by Plato. He found that the dialectical dialogues, Parmenides, Sophist, Politicus, and Philebus, contain an ontological doctrine which can only be explained as a continuation of the standpoint reached in the Phaedrus and the Republic. Peipers has also succeeded in showing that these dialogues are nearer to the Laws than any other writing of Plato, and his argument convinced one of the most competent living investigators of Plato, Susemihl,55 who publicly acknowledged that he abandoned his former opinions, expressed thirty years earlier, as to the date of the dialectical dialogues. Susemihl's impartiality, which allowed him to make this confession, was compensated by the obstinacy of Zeller, who, in his authoritative work on Plato, in each successive edition maintained the old assumption of a Megaric period to which he referred the Sophist, Politicus, and Philebus, alleging them to have been written before the Republic.

Also the editor of the later editions of Ueberweg's but Zeller History of Greek Philosophy, M. Heinze, adhered to and the old error of Hermann and Schleiermacher, and continued to spread the conviction that the Sophist and Politicus were written before the Banquet. If we take into account that Ueberweg's and Zeller's works on Greek philosophy enjoy up to the present time the greatest of philo-

Ueberweg's conclusions as to the late date of the dialectical dialogues.

Peipers came to the same results by his study of Platonic ontology, which convinced Susemihl,

popularity, there will be no exaggeration in saying that Ueberweg's earlier conclusions, which he afterwards abandoned, although confirmed with new arguments by Tocco, Teichmüller, and Peipers, remain almost unknown to general readers of Plato. In a very popular work on Plato, written by Weygoldt, we still find the dialectical dialogues placed before the *Republic*, and the same order occurs ⁹⁵ in the most recent work of E. Pfleiderer on Socrates and Plato.

While the general reader is thus kept in ignorance of the latest investigations, new detailed inquiries of Bergk, Rohde, Christ. Siebeck. Dümmler

Since Susemihl's conversion, however, many special investigations have fortified Ueberweg's conclusion in favour of a late date for the Sophist and Politicus. Besides such philological investigations as those of Bergk, 96 Rohde, 97 and Christ, 98 who declared in favour of a very late date for the Theaetetus and consequently also for the Sophist and Politicus, we have in the last ten years a new confirmation, through an investigation by H. Siebeck, 99 author of a history of psychology. Siebeck started from the question whether Plato did not quote his own works, as is frequently done by Aristotle. He observed certain allusions which led him to affirm that Plato not only quotes the Republic and the

⁹⁵ Weygoldt, Die platonische Philosophie, Leipzig 1885; E. Pfleiderer, Socrates und Plato, Tübingen 1896. The views of this author have to be specially dealt with in connection with the date of the Republic, as he subordinates the whole order of Plato's dialogues to a distinction of some successive stages in the Republic, wherein he follows Krohn (see note 90). Pfleiderer's conclusions as to the order of other dialogues are not very distant from Hermann's views, with the difference that Pfleiderer against every probability places the Euthydemus after the Sophist, and the Phaedo before the Symposium.

Politicus in the Laws, but that he also in the Republic increase announces a later settling of matters dealt with in the the Sophist and Philebus.

Also Dümmler, 100 who continued Teichmüller's studies on supposed feuds between Plato and his contemporaries, added to the considerable stock of arguments in favour of a late date of the dialectical dialogues, by a special inquiry into the relations of Plato to Antisthenes, Antiphon, Aristippus, Aristophanes, Aristotle, Empedocles, Euripides, Gorgias, Heraclitus, Hippias, Isocrates, Polycrates, Prodicus, Protagoras, Xenophon, and others.

Besides these works, which deal with a great number of writings, there are many special dissertations on each dialogue, which constitute, taken together, ample evidence for a definitive solution of the problem of their But this literature has grown so much that nobody has attempted to collect all such detailed observations and to give a clear picture of all arguments urged in favour of each hypothesis. We have here specially insisted been apon the date of the dialectical dialogues because of their preciated exceptional importance for Plato's logic, but on each other work, as the Republic, Gorgias, Phaedo, Phaedrus. hundreds of authors have expressed various opinions, generally based only on a very limited knowledge of other investigators. So long as all these separate observations are not summed up, every new writer on this subject but the runs the risk of repeating discoveries already made, or falling into errors easy to avoid. In these circumstances a new general work on Plato's dialogues. summarising all the separate observations made in this century, becomes indispensable to the progress of further investigations concerning Plato's philosophy. This need has been felt by the French Académie des Sciences morales et politiques, a learned society which has author awarded many considerable prizes for works on Plato, neglecting

amount of evidence in favour of Ueberweg's opinion.

The necessity of an impartial co-ordination of all detailed investigations has by the French Academie des sciences morales. work of C. Huit awarded a prize does not correspond to the purpose, the

100 Dümmler, Akademika, Giessen 1889; Chronologische Beitrage su einigen platonischen Dialogen, Basel 1890.

the problem of chronology. among which those of Chaignet and Fouillée were not without value. But the last answer to the summons of this Academy, a work in two volumes written by C. Huit under the title La vie et l'œuvre de Platon, published in Paris 1893, falls short of the most modest critical requirements, and by no means satisfies its purpose. The author knows so little of the special literature of his subject that he repeats Schaarschmidt's arguments against the authenticity of the most important works of Plato without being aware that these arguments have been often refuted during the last thirty years. He also ignores the steady progress in chronological investigations since Ueberweg, and regards the problem of Platonic chronology as almost insoluble.

Chronology of Plato's works not an insoluble problem, as has been generally thought in France.

Such is not the conviction which results from an impartial survey of what has been already done for our There is a progress in the validity of conclusions, as well as in the method employed from Tennemann to Schleiermacher, from Schleiermacher to Hermann, from Hermann to Susemihl, and from Susemihl to Besides these inquiries referring to the Ueberweg. majority of the works of Plato, there has been real progress also in the special investigations referring to each single dialogue. All these results should be co-ordinated in a general subject index showing all arguments in favour of and against every hypothesis as to the date of each several dialogue. Then only it would be inevitably seen that there is overwhelming evidence in favour of some conclusions and against others.

It is at least easy to prove the late date of the dialectical dialogues. It is not the purpose of the present work to furnish the reader of Plato with such an extensive index, but chiefly to indicate the agreement of the chief arguments advanced in favour of a late date of the dialectical dialogues, in order to show that the logical science founded by Plato was advanced during his own lifetime by his renewed efforts.

Before we enter upon the task of tracing this logical

development through Plato's works, it is a duty to give For this, the reader some information about a special kind of investigation, subsidiary to the general study of Platonic chronology. We have limited the above review to those authors who sought to establish the order of Plato's dialogues on arguments taken from their contents; because it is our own purpose likewise to compare the contents of a series of Platonic dialogues as to their logical theories. which has But, admitting all the importance of the contents, we must still contend that the form and style of Plato's writings also give some indications as to their chronological order, and it is useful to compare the conclusions arrived at by both methods. The study of the style of Plato is much more recent than that of Plato's philosophy, but it has led to very important conclusions as to the order of his writings, and it is our duty to consider these conclusions before we venture to represent the origin and growth of Plato's logic.

not only contents should be compared, but also the style. been investigated only in recent times.

CHAPTER III

THE STYLE OF PLATO

Style a mark of the identity of an author independently of the contents of his writings.

If we wish to assure ourselves of the identity of a friend, whose thoughts and actions are familiar to us, the simplest plan is to appreciate his appearance and to verify our impression by the tone of his voice. Could one of our best friends perfectly disguise his voice and his features, it would be difficult to recognise him by the manifestations of his thoughts or by the moral character of his actions. Now the external form of a writer is his style, and it betrays him even when he for some reason may be professing thoughts very different from those which we usually associate with his name.

Great
differences
of style
between
one
author
and
another
and in the
works of
the same
author.

A thought can be expressed in various ways in the same language; it might even be said that the notion of any one language includes as many languages as there have been original writers in it. This is truer of Greek than of any modern language, and is especially true of Greek prose writing in the fourth century B.C. A student having read and understood all the works of Xenophon might be unable to understand many passages in Plato. Plato's language differs from Xenophon's, though both wrote Attic prose.

That there are peculiarities of style which distinguish a writer among many others is almost self-evident; that the style of some writers has changed in the course of years is a patent fact; yet many objections have been made to stylistic study as a means of settling problems of ascription and chronology. Everybody knows the discussions which this method provoked when applied to

Shakespeare, though, as regards Shakespeare, the difficulty is diminished by the fact that metrical intricacies and the poet's resources are more varied than is the case with prose, even the prose of such a writer as Plato. But it is to be noted on the other hand that Plato's literary activity was continued through a period twice as long as Shakespeare's.

Since most readers think that style is indefinable, they Definition infer that it must afford an insecure basis for scientific of style reasoning. So Plato thought concerning all physical movements in the universe. According to him, their infinite variety hindered genuine scientific investigation (Phileb. 59 AC); they could only be guessed at with it to be imsome degree of probability (Tim. 29 c, 48 D); and such possible. guesses constituted 'a pleasure not to be repented of, and a wise and moderate pastime' (Tim. 59 D: ἀμεταμέλητον ήδουην . . μέτριον παιδιάν καὶ φρόνιμον), but they did not admit of accurate determination (Tim. 68 c D).

difficult, and Plato would have held

This Platonic view of natural science extended also to But linguistics (Crat. 421 D), and the Master would have modern smiled at those who count words in his writings. the science of modern mechanics, by application of new enable us infinitesimal methods, unknown to Plato, has reached a degree of certainty by which it claims rank as a more problems exact science than any investigation of the human soul, beyond then we need not allow Plato's linguistic scepticism to the reach keep us from the 'moderate pastime' of investigating his of Plato. style. If an exact definition be possible of the notes which distinguish Plato's style from the style of other writers, or by which a work written contemporaneously with the Laws differs from a work written at the time when Plato founded the Academy, then we may hope to ascertain the true order of Platonic dialogues according to the stylistic variations observed in them.

But if methods with many

There is no exaggeration in this pretension, since Identity questions of identification are generally settled by purely of handwriting no more definite than identity of style. external tests. The identity of handwriting, consisting in many minute signs difficult of definition, is held to be so far ascertainable, that on an expert's decision in such matters a man's life may sometimes depend. The limited number of marks of identity contained in a signature is sufficient to decide its authenticity for all purposes. A banker requires no further security for paying out the deposits left with him under his responsibility. Documents written by a prisoner, despite his denial of their authenticity, may prove his guilt in the eyes of any magistrate.

It consists in a number of peculiarities, among which only those essential need consideration.

If handwriting can be so exactly determined as to afford certainty as to its identity, so also with style, since style is still more personal and characteristic than handwriting. But the definition of style requires a deeper study, because style is not, like handwriting, accessible to the senses. It may be objected that, since style has an almost infinite number of characteristic notes, it cannot be reduced to one fixed formula. The answer is, that a like infinity of characteristics exists in every object of natural science, and that science is possible only through the distinction of essential marks from those which are unessential.

Essential marks of style may be found first by investigation of the vocabulary of an author.

What, then, are the essential marks of style? Individuality of style is developed along two different lines, each of which requires special study. An author uses words as the raw material for the expression of his thoughts, and the choice of words affords him the most obvious opportunity for displaying his individual taste. There are cases when one given word, and no other, expresses a given idea; but this is not the general rule. In most phrases there are words which might easily be changed for others. In every language there are many words which have never been used by some authors, and other words used only once by their inventor. The contrivance of new compounds, and even of entirely new meanings for old and simple words, is of common occurrence in the

This includes his style of great writers. A knowledge of the words invented tendency by an author and only once used by him is an important factor in determining questions of style and ascription. We need a full index of such words invented by all authors who lived in Plato's time. In comparing them we should probably find that Plato proceeded in some respects differently from others in his new formations. We should notions. be led to observe what methods of composition were used by him in each of his works. We should be enabled to classify the occasions when he was most inclined to have recourse to such new formations, as, for instance, in employing mathematical, physical, or dialectical terms; and we should remark a difference between the manner of They vary expressing these notions at various epochs of Plato's life, taking as our starting point a few productions undoubtedly written very late, as the Laws, and comparing them with other works, as to which there is ample evidence that they date earlier: for example the Apology. body doubts that the tenth book of the Republic was epochs. written after the first book, and many authors agree that it belongs to a much later period. In some cases there is also a general agreement as to the relative date of two dialogues; thus it is certain that Plato wrote the Politicus after the Theaetetus, the Timaeus after the Republic, and it is scarcely less certain or less generally admitted that the Philebus was written after the Laches and Charmides. A comparison between such groups would lead to definite conclusions as to the direction taken by Plato in the modifications of his style.

Besides this chapter on new words, we need in Poetical Platonic lexicography another chapter on rare words borrowed from poets. It is not usual to introduce into philosophical prose words which have been heretofore used only in poetry. The language of verse always differs from prose language, and the difference is exceptionally prose manifest if we compare the tragedians with the Attic writers.

to invent new words or compounds for certain classes of

in various works admitted to have been written at different

words used by Pieto more than by other

orators. Plato is known to have used liberally words which before him were peculiar to dramatic poetry, and it is an interesting question to answer, whether this taste be equally prominent in all his works, or be chiefly apparent in some of them.

Use of foreign words. Words borrowed from a foreign dialect would form a third class of rare words to be classified and enumerated. This classification could be definitely settled only after collecting all the lexicographical evidence, because it would serve no purpose to form classes out of a few chosen examples.

Rare and common words used differently. In the above three classes we should include first of all such rare words as are used for the expression of some peculiar idea. Their use depends mainly on the thoughts they convey, and is essentially different from that of common words occurring frequently and not generally indispensable in cases where they occur. Among these common words the particles are conspicuous. The new compounds, poetical and foreign words were closely related to the contents of the text; it is not so with particles.

Frequency of each word in Plato not yet investigated. We are still far from possessing a complete index of the Platonic vocabulary, informing us precisely how often a characteristic word occurs in each dialogue. Assuming that no word used by Plato is missing from Ast's Lexicon ¹⁰¹ and Mitchell's Index, ¹⁰² it might be easily ascertained how many different words, and especially how many substantives, verbs, adjectives, etc., he used. But a separate effort would be required to calculate the frequency of each word in each work. Even if we knew the exact number of times each word occurred, there would still remain the special task of calculating the opportunities for its occurrence. Such calculations are needed for but a small part of the vocabulary, because words of rare occurrence in all works form the majority. Ast's

Opportunities for the use of each kind of

¹⁰¹ F. Ast, Lexicon Platonicum, vols. i.-iii. Lipsiae 1885-1836-1888.

¹⁰² T. Mitchell, Index Graecitatis Platonicae, 2 vols. Oxonii 1882.

Lexicon contains on 1,975 pages approximatively 10,000 words are different words used by Plato, while the whole number of not the words in the text of all the works of Plato amounts roughly to 600,000.103

If each word in Plato's text be used, on an average, sixty times, we might be justified in defining as rare words, words which in all the writings of Plato occur less than sixty times, or on average less than once in twenty pages (ed. Didot). These would form the majority, and a certain natural limit of scarcity would soon be detected, by the absence of certain degrees of recurrence. Suppose for average instance that, as appears from some inedited calculations frequency. by Tadeusz Miciński, the number of words occurring less than ten times is above 7000, and that x_1 is the number of words occurring between ten and twenty times, generally x_n the number of words occurring between 10nand 10(n+1) times, then the limit of rare words will be reached when $x_n = 0 = x_{n+1} = x_{n+2} \dots$ We should at Limit of once observe that there are no words occurring more than m and less than m+y times, and with those occurring m+y times would begin the series of common words up to such words as occur a maximum of times, possibly thousands. Such statistics of Plato's vocabulary would require immense labour. A new Lexicon Platonicum are with all the above indicated details, in spite of the utmost missed.

A limit between rare and common words is given by the

scarcity reached when certain degrees of frequency

Even this would give us knowledge only of one aspect Arrangeof Plato's style: its vocabulary. But, as Plato himself ment of observed, we should examine in a speech not only the words

economy of space, could not occupy less than several

volumes like Bonitz's Index Aristotelicus.

102 This number of different words used by Plato has been calculated by Tadeusz Miciński upon the assumption that each 100 entries fills 20 pages of Ast's Lexicon, as has been found by counting the entries on 20 pages in twenty-five different parts of the lexicon. The total number of words used by Plato results approximately from the consideration that the text of all the 35 works bearing Plato's name, including the small spurious dialogues and some of doubtful authenticity, fills in Didot's edition only 1245 pages of 54 lines, with 8-11 words in each line.

distinguished already by Plato from their selection. Numerical ratio of the parts of speech intermediate between statistics of frequency and the proper characteristics of arrangement.

choice of words, but also their arrangement (Phaedr. 236A). The arrangement of words is more difficult to define than The same thought may be rendered not their number. only by different words but also by a different arrangement of the same words.

One of the characteristics of arrangement is the numerical proportion between verbs, adjectives, substantives, and other kinds of words, because in many cases the same word appears as adjective or verb or substantive; the repetition of a noun can be avoided by a pronoun, and this allows many possible variations. For instance, 'a wise man is unable to become unjust' and 'wisdom forbids injustice' express substantially the same thought, while in the first we have thrice as many adjectives as substantives, and in the second no adjective at all. highly probable that Plato did not always preserve the same proportion in the use of various parts of speech. More especially the numerical relations between adjectives and substantives, between substantives and verbs, between these and adverbs, afford very characteristic properties of style, which might enable us to notice similarities or differences between one composition and another.

Inversion acteristic in Plato's later style. as may be seen from two samples of 500 words in Protagoras and Laws.

The knowledge of these quantitative relations of every very charkind of word is intermediate between the lexicographical statistics of the scarcity or frequency of each term and the study of the construction of phrases. Here the immediate object of study would be the relative position of subject and predicate, of nouns and determinatives. adverbs and verbs, which may all occupy the first or the second place. No author follows a uniform practice in this respect, and variation is the rule; but at each period of life an author may show a certain predilection for one or another order in the phrase. Taking only the first five hundred words in the Laws and comparing them with the first five hundred words in the Protagoras, we may readily see how great are the differences between the two

dialogues as to	the use and	order of	the substantives	\mathbf{and}
the adjectives	:			

Number of	In Protagoras, words 1-500	In <i>Laus</i> , words 1–500
Substantives	68	102
Adjectives	18	81
Verbs (including participles)	91	79
Adjectives preceding the correlated substantive	7	9
Adjectives following the correlated substantive.	0	18

If further calculations confirmed these, then it would Further appear that in his later style Plato used many more substantives and adjectives than in his earlier writings, and that he acquired in old age a predilection for putting the noun before its qualifying words. But in order to draw such conclusions the examination should be extended to all the works of Plato, and should include the position of concluadverbs before or after the verb, of genitives before or sions. after the noun on which they depend, and of all kinds of words in their mutual interdependence.

tions required before drawing general

If we observe that the Philebus has some hundred Stylistic peculiarities in common with the Laws, and has very few constant characters in common with other dialogues, then we may be justified in ascribing the Philebus and the Laws to the same epoch of Plato's life, with a certainty scarcely less than that which enables us to recognise that Plato and Demosthenes both wrote Attic prose.

tests are conclusive if their number be sufficient.

But, besides these, there remain some other classes Variety of of stylistic peculiarities: the length, construction, and such tests interdependence of phrases; the rhythm produced intentionally or resulting naturally from the order of words selected; the recurrence or exclusion of certain phonetic effects, as, for instance, avoidance of the hiatus progress or the repetition of syllables with the same vowels or of similar consonants; a preference for certain sounds; the use inquiries. made of quotations and proverbs; the frequency of

will be found increasing with the

rhetorical figures and tropes; and many other points which would be suggested in the course of such inquiries.

Usefulness of detailed investigations depends upon the importance of the chronology of Plato's writings. and is far greater than that of idle discussion on Plato's philosophy.

Such investigations are useful, inasmuch as they lead us to a better knowledge of the mental development of one of the greatest of all thinkers. Hundreds of German dissertations on Plato contain mere repetitions and vague generalities, of no importance for our knowledge of this Had their authors spent the same time in philosopher. studying some special property of Plato's style, they would have made valuable additions to the positive knowledge of his development. The task of investigating every detail of style seems immense, but the number of persons fit for such work is much greater than the number of those capable of passing judgment on Plato's philosophical Any student, with a moderate knowledge of doctrine. Greek, is made richer for life by a single reading of all Plato's works, and this requires but an hour's study a day during a year. And if in such a reading attention be directed mainly to some special peculiarity of Plato's style, the impression produced by the contents need not be weakened. Each year in all countries hundreds of students dedicate their time to classical philology. but one in a dozen undertook a study of Plato's style, within ten years our knowledge of Platonic chronology would have progressed more than in these twenty centuries.

Zeller's objections based on insufficient knowledge of the existing stylistic investigations, which are little

Of the foregoing programme of investigation but a very small part has been executed, and this without any systematic common aim. Zeller, criticising chronological conclusions based on stylistic investigations (Philosophie der Griechen, II. i. p. 512), objects that the number of characteristics investigated is too small, and that only if it amounted to hundreds could we thence draw inferences as to the chronological order of Plato's dialogues. Of all the investigations made, Zeller quotes only those of Dittenberger, Schanz, Frederking, Gomperz, and Hoefer. He is apparently unaware that besides these authors there

are many others whose study of Plato's style does extend known, over hundreds of stylistic peculiarities. It is unfortunate being that these studies are little known, being chiefly pub- usually lished in school programmes or as university dissertations. The authors, generally unaware of the work of their predecessors, were therefore unable to appreciate in perithe cumulative evidence afforded by the coincidence of odicals. results obtained through different methods. A full biblio- No bibliography of Plato 104 is as necessary and desirable as a graphy of complete Lexicon Platonicum, 105 and neither is likely to appear very soon, for such works require an amount of material resources which is rarely at the command of Platonic scholars.

published in small tracts or Plato exists.

Important contributions to the knowledge of Plato A survey have been buried in introductions to the text of a single and comdialogue, or in dissertations privately printed for the pur- parison of

104 The bibliography of Plato is, up to the present time, very incomplete. Besides such general works as those of Ueberweg and Zeller, many indications of older literature are found in: W. S. Teuffel, Uebersicht der Platonischen Literatur, Tübingen 1874; J. Vahlen, 'Zur Litteratur des Plato' (Zeitschrift für Oesterreichische Gymnasien, 23er Jahrgang, 1872, p. 518); W. Engelmann, Bibliotheca scriptorum classicorum, 8th ed. Lipsiae 1880. The current literature is indicated almost exhaustively in the quarterly Bibliotheca philologica classica, published since 1873 by S. Calvary in Berlin. For a full Platonic bibliography it would be indispensable to supplement the information contained in these publications by a careful comparison of the catalogues of larger public libraries, and even of smaller university libraries in Germany, France, Great Britain, and Italy. Also the numerous antiquarian catalogues issued yearly by many German secondhand booksellers contain titles of some smaller publications not easily found elsewhere. A Platonic bibliography based on all these sources would very much facilitate special investigations, if it contained not only the titles but also a short account of the contents of rare publications. But such a work implies much travelling, because all the materials could nowhere be found together.

105 The mere cost of reprinting Ast's Lexicon, which is now very rare, has been estimated at 7001., and as the work is incomplete, a revision and thorough comparison with the text of the best edition of Plato would be indispensable. The cheapest cost of such a labour has been estimated by Dr. C. Ritter (cf. note 134) at 750l., which raises the expense of a new edition of Ast's work to 1,450l., while the number of buyers for such a work could scarcely exceed a few hundreds. This removes the probability of such a publication being undertaken in the ordinary way.

detailed investigations indispensable as illustration of the above assertions, though it is difficult to make it exhaustive.

pose of obtaining degrees. Many are rarely to be found in circulation or in public libraries, and for this reason writers on Plato often neglect their predecessors. In these circumstances it may be useful to give here a short review of over forty publications referring to Plato's style, and to insist upon the lesson they teach when their conclusions are compared. It is probable that besides these authors others have written on this subject, without being aware of the importance of their investigations. It is common to all these detailed inquiries that, considered separately, they seem inconclusive, while taken together they prepare the way for a complete change of the prevailing views on the matter to which they refer.

First investigations on Plato's style made by Engelhardt of Gdańsk.

The merit of priority in considering I. Engelhardt. the question of Plato's style (but without chronological applications) belongs to Friedrich Wilhelm Engelhardt, late director of the gymnasium in Gdańsk (Danzig). He published in the course of thirty years (1834-1864) five dissertations on Plato's style 106 in five school programmes never mentioned in any later work on that His aim was not chronology but grammar, subject. and he undertook in the first three dissertations a very careful study of the examples of anomalous construction in Platonic phraseology. After a long enumeration of all 'anacolutha' found in the works of Plato, he classified these stylistic phenomena, and repeated very carefully for each class the indication of all passages containing an example of that particular construction.

From his work some From these very interesting tables we can easily gather some indications bearing on the Platonic chrono-

¹⁰⁰ F. G. Engelhardt, Anacoluthorum Platonicorum specimina, i. ii. iii. program. Gymnasii Gedanensis 1884, 1888, 1845. The third dissertation contains on pp. 87-46 and 47-48 two indices of the passages enumerated also in the first two. By the same author, also as programme of the same gymnasium in Gdańsk: De periodorum Platonicarum structura, dissertatio prima (pp. 1-86), Gedani 1858, dissertatio altera (pp. 1-27), Gedani 1864 (iv-v).

logy. In order not to increase the bulk of our refer- pecuences, we must limit our quotations to those stylistic liarities of marks which may be regarded as characteristic of later style, being either limited in their occurrence to the latest dialogues, or at least increasing in their frequency. To exclude characteristics occurring occasionally in earlier dialogues would deprive us of a useful measure of affinity the followbetween each of them and the latest group. With a view ing list to clearness of exposition and arrangement we take for granted what will only appear as the ultimate result of our inquiry, namely, that the Sophist, Politicus, Philebus, Timaeus, Critias, and Laws form the latest group of of Plato's Plato's works. This, as will be seen in the course of this style. exposition, becomes probable beyond reasonable doubt by the totality of stylistic observations, because these six dialogues have hundreds of stylistic peculiarities which occur nowhere else in Plato, and likewise show an increasing frequency of peculiarities which in other dialogues are exceptional. For easy reference the stylistic peculiarities of Plato's later style follow here in the chronologic order of their observation, and are numbered consecutively.* Among the twenty classes of altered construction

later style can be gathered and included in of five hundred neculiarities

* In the following enumerations the dialogues are quoted in their probable chronological order; the numbers placed after the name of each dialogue indicate the number of occurrences; where no number is given, the occurrences have not been counted. The numbers are printed in different type to show their relative importance. 2, 3, &c. mean that a peculiarity is repeated 2 or 3 times in the dialogue named, but is not frequent. 3, 4, &c. mean that the same peculiarity, occurring 3 or 4 times, must be looked upon as frequent, in view of the size of the dialogue, if each occurrence is found on average more than once in 12 pages (ed. Didot). Numbers printed thus: 34, mean that a peculiarity is very frequent, occurring once or more in every two pages. + means a word not used before Plato; (A), a word used by Aristotle; *an ἄπαξ εἰρημένον according to the author from whom the observation is taken. Dialogues of dubious authenticity (Clitopho, Minos, Hipparchus, Epinomis, Theages, Hippias Major, Alcibiades I, and II., Amatores) or of no logical importance (Hippias Minor, Io, Menezenus, Lysis) are omitted in this list. The writings on the style of Plato are numbered consecutively in the notes by small Roman numbers placed after each title: i-xlv.

enumerated by Engelhardt the following characterise the later style:

Changes of construction observed by Engelhardt are specially frequent in the Laws and other late dialogues.

- 1. 'Anacoluthiae genus quod ex symmetriae studio oritur' (Anacol. Platon. spec. III. p. 39) is a change of construction produced by Plato's increasing taste for symmetry, and consists in beginning the second part of the phrase in the same manner as the first, as for instance in Phaedr. 288 Β: τοιαῦτα γὰρ ὁ ἔρως έπιδείκνυται δυστυχούντας μέν, ά μη λύπην τοις άλλοις παρέχει, άνιαρὰ ποιεί νομίζειν· εὐτυχοῦντας δὲ καὶ τὰ μὴ ἡδονῆς ἄξια παρ' ἐκείνων ἐπαίνου ἀναγκάζει τυγχάνειν. Such changes of construction were observed by Engelhardt in: Gorg. 1 Crat. 2 Phaedo 1; Rep. 1 Phaedr. 1; Soph. 1 Phil. 1 Tim. 2 Legg 3.
- 2. Change of construction in consequence of the more convenient form of the continuation (ex commodiore sequentis structurae forma, p. 89), as, for instance, Euthyd. 281 D: κινδυνεύει σύμπαντα, α τὸ πρώτον ἔφαμεν ἀγαθὰ εἶναι, οὐ περὶ τούτου ὁ λόγος αὐτοῖς είναι, ὅπως αὐτά νε καθ' αὑτὰ πέφυκεν ἀναθά. . . . Such anacoluthiæ are found: Meno 1 Euthyd. 1. Symp. 1; Rep. 5; Polit. 1 Phil. 4 Tim. 4 Legg. 4.
- 3. Two different constructions co-ordinated and dependent on the same enunciation (III. p. 41: anacoluthia fit duabus structuris conjunctis), as for instance, optat, with $d\nu$ and infinitive both dependent on δοκεί in Lach. 184 B, or ώς with genit. partic. and infinitive in Charm. 164 E. Such cases were found: Apol. 1 Charm. 1 Lach. 1 Gorg. 1; Rep. 4; Legg. 9.
- 4. Anacoluthia ex transitu orationis suspensae in directam vel contra (III. p. 41): Gorg. 1 Symp. 1 Phaedo 4; Rep. 3 Phaedr. 1 Theaet. 2; Soph. 1 Phil. 1 Legg. 2.
- 5. Cases of omitted apodosis are quoted (p. 44) by Engelhardt: Gorg. 2 Symp. 2 Phaedo 2; Rep. 1; Phil. 1 Legg. 8.

Other observations of Engelhardt are not peculiar to later style or do not the works of Plato.

The other kinds of change of construction enumerated by Engelhardt do not appear to be specially frequent in the latest dialogues. His collections extend over all the works of Plato, and include more than four hundred cases. Being unaware of the chronological application of his work, he perhaps did not attempt a painful completeness of quotations. But even if he collected only those changes of construction which struck his attention in refer to all a first reading, we may assume that he had no special reason to notice the actual occurrence of such cases in one work more than in another. His observations are therefore valuable, and they may be accepted as at least approximate.

This author's later investigations on the construction of phrases are limited to the Phaedo and Republic, so that they afford no matter for comparison. interesting, however, to notice that according to Engelhardt co-ordination of phrases prevails in Plato over subordination, and that the principal sentence generally precedes all subordinate clauses. Herein he sees a radical difference between Plato and Demosthenes, who inverted more frequently the natural order. Engelhardt thinks (Period. Plat. I. p. 26) that this difference in the order of co-ordinate and subordinate sentences is due to the dialogical character of Plato, as opposed to the rhetorical character of Demosthenes. He would perhaps have been less confident as to the essential difference between the style of Plato and Demosthenes, had he given as much attention to the Laws as to the Republic and Phaedo. It remains an interesting problem to compare the Laws and other dialogues as to the construction of phrases, and Engelhardt's classification would be most useful for this purpose.

II. KAYSSLER. Of less importance is a small disser- Other tation by Kayssler 107 (1847) on Platonic terminology. The authors of author accuses Plato of inconsistency in the use of terms, even as defined by himself, and enumerates the terms which he held to be the most important, without any attempt at comparing earlier with later dialogues, or at using the difference in terminology as an instrument of chronological determination.

the same epoch are less important.

III.-V. J. Braun 108 (1847, 1852) and A. Lange 109 (1849), quoted by Engelhardt, seem also to have left

¹⁹⁷ Kayssler, Ueber Plato's philosophische Kunstsprache, Oppeln (Polish Opole) 1847 (vi). The inexactitude of quotations is seen from the fact that Kayssler affirms p. 13 to have found συναγωγή and διαίρεσιs only in Phaedr. Soph., while they occur also in Theaet. Rep. Phil.

¹⁰⁸ J. Braun, De hyperbato Platonico i. ii. progr. gymnas. Culmensis (Chelmno), 1847, 1852 (vii-viii).

¹⁰⁰ A. Lange, De Constructione periodorum, imprimis Platonis, Vratislaviae 1849 (ix).

chronology out of the question in their investigations on Plato's phraseology. To the same time belongs the dissertation of F. MICHELIS ¹¹⁰ (1849), which deals more with Plato's views on style and grammar than with any specialities of Plato's own style.

Kopetsch of Lyk published an interesting dissertation on a class of among which many have been invented by Plato, but few can be included in this list because Kopetsch's enumeration of passages is incomplete.

Kopetsch VI. Kopetsch. Some interesting observations are of Lyk contained in the dissertation of Gustav Kopetsch (1860), published teacher in the gymnasium of Lyk. 111 He also had no chronological purpose, but his grammatical aim to collect from Plato's writings every kind of information about the use of adjectives in \(\tau o s\) and \(\tau \delta o s\) gives us an opportunity to select from his enumerations such uses of this adjectives, class of words as appear to be peculiar to Plato's later among

- 6. Adjectives in τος composed from a substantive and a verb are very rare. Kopetsch enumerates only (pp. 4 and 19): Phaedr. 2 (σφυρήλατος 286 Β, νυμφόληπτος 288 D) Tim. 1 (πυρίκαυτος 85 C) Critias 1 (χειροποίητος 118 C), Legg. 1 (αἰχμάλωτος 919 A).
- Adjectives in τός, oxytona, formed from compound verbs
 (p. 6): Prot. 2 Meno 3 Phaedo 1; Rep. 1 Phaedr. 1; Polit. 1 Tim. 4
 Legg. 3 (παραιτητός, διαβατός, ἐκλεκτός).
- 8. Superlatives in τότατος, beginning with δυς or εὐ (p. 7): Phaedo 2 (δυσελεγκτότατον, εὐαρμοστότατον) Tim. 3 (δυσαλωτότατον, δυσκινητότατον, εὐκινητότατον) Legg. 1 (δυσμεταχειριστότατον). Superlatives in τότατος of other adjectives occur besides: Apol. 1 Prot. 1 Symp. 3 Rep. 3 Soph. 1 Phil. 3 Tim. 2 (with the preceding Tim. 5).
- 9. Adjectives in τος composed of an adjective and verb: Phaedo 1 (πολυθρύλητος); Rep. 1 (πολυθρύλητος) Phaedr. 1 (Ισομέτρητον); Polit. 2 (όλόσχιστος) Tim. 1 (νεότμητος) (p. 19).

Kopetsch quotes many other uses of adjectives in ros, but without attempting completeness of quotation except in the above cases of very rare occurrence. Of some hundred adjectives quoted and classified by this author, many might be included in our list, had their

¹¹⁰ F. Michelis, De enuntiationis natura, sive de vi quam in grammatica habuit Plato (pp. 1-68), Doctor's dissertation, Bonn 1849 (x).

¹¹¹ G. Kopetsch, De verbalibus in τος et τέος Platonicis dissertatio, cui intextae sunt breves de Homericis adnotationes, Lyck 1860, programme of the German Gymnasium in Łyk (xi).

occurrence been completely investigated. This was not the aim of Kopetsch, since he was not aware of any application of his work to Platonic chronology. his purpose it was sufficient to quote a few characteristic occurrences of each word. A full investigation of the use of adjectives in Tos and Téos in the works of Plato remains a very interesting problem for future special inquiry. Here we quote only two more single words which, according to Kopetsch, as well as Ast, occur but seldom in Plato:

10. ἀγένητος (p. 27): Prot. 1; Phaedr. 1; Legg. 1. 11. μεμπτός (p. 21): Theaet. 1; Legg. 1.

R. Schöne. The first author who insisted energetically on the importance of stylistic observations as leading to chronological conclusions seems to have been R. Schöne 112 (1862) in his dissertation on Plato's Protagoras. But he had a very superficial knowledge of Plato and of the means of defining literary style. Schöne, despising enumeration of stylistic characteristics, chronoquotes the authority of art critics, who judge whether a picture has been painted by Raphael or Murillo, without condescending to give special reasons for it, and he wishes to introduce into Platonic chronology such artistic intuitive judgment without the help of reasoned evidence. Still, Schöne is right in his fundamental argument as to the comparative value of style and contents for chronological conclusions. He declares that an author can put in each work such contents as he chooses, while his style will simply be the result of his effort to write as well as he can, if he is so careful about the form of his writings as Hence style is the surest measure of the Plato was. stage of a great writer's evolution. Schöne quotes Lessing and Goethe as competent authorities for such a view on

the superiority of stylistic tests as means of logical conclusions, but failed to find the right method of measuring differences of style.

recognised

112 Richard Schöne, Ueber Platons Protagoras, Leipzig 1862 (xii). author confesses his indebtedness for a great part of his theories to Prof. Weisse's lectures on Plato delivered in 1860-1861 at the University of Leipzig.

the stylistic progress of great writers, and he concludes: 'wir dürfen den Stil als ein schlechthin allgemeines und sicheres Kriterium betrachten, wo es sich um Echtheit und Zeitfolge der platonischen Schriften handelt' (p. 21). But after having thus clearly set forth the importance of stylistic study in determining Platonic chronology, Schöne fails to find a right method for such investigations. He believes an exact analysis of style impossible, ignoring the labours of Engelhardt, Braun, Lange, and Kopetsch; and invokes a mysterious power, the 'feeling of style.'

This 'feeling' led Schöne to see a higher degree of stylistic perfection in narrated conversation than in dramatic dialogue. He inferred that all narrated dialogues—the Charmides, Protagoras, Banquet, Phaedo, Republic, and Parmenides—are later than all the works whose form is dramatic. Schöne did not perceive that Plato, after having used the form of narrated dialogues, grew tired of the repetitions which it involves, and returned to the primitive dramatic mode. Had Schöne limited his judgment to the relation between Protagoras and the small dramatic works, such as the Laches, Crito. Euthyphro, his observation of the stylistic perfection of a narrated dialogue could not have led him to the absurdity of placing the Laws and even Timaeus earlier than the Republic. Thus he discredited the method which he was the first to propose. He did not understand that for a philosopher contents are more important than form, and that the artistic skill which Plato exercised on his narrated dialogues was peculiar to a time when the deepest problems of thought had not vet absorbed the writer's whole attention and endeavour. Schöne represents Plato as struggling during his maturity for perfection in the form of the philosophical dialogue, after spending earlier years in elaborating philosophical convictions. Thus the Sophist and Philebus appear to Schöne earlier than the Protagoras. He had the merit

and boldness of drawing extreme consequences from his theory, arriving at the untenable conclusion that Plato renounced dialectical aims for the sake of artistic perfection (p. 82).

VIII. C. MARTINIUS. What Schöne attempted by a Martinius mistaken route has been more successfully carried out as regards a special characteristic of Plato's style by C. Martinius 113 (1866, 1871), who, himself a teacher, began with the conviction that Plato as a teacher must have progressed in the art of interrogating, and that therefore differences in the form of questions might lead to chronological conclusions as to the order of the Martinius first collected what Plato himself dialogues. had said upon the art of asking questions, and then proceeded to classify the interrogations found in Plato's dialogues. Enumerating not less than eighteen different kinds of questions, he invites the reader to continue the inquiry as to the occurrence of each of these in the entire works of Plato, in order to establish the progress made by the philosopher in his practice as a teacher. Martinius himself published, five years after his first effort, a very short summary and continuation, 114 in which he insists on the importance of 'Suggestivfragen,' that is, questions which take for granted something not yet accepted or discussed.

Such questions seek to determine something supposed to be known, while it is really not known, as if a prisoner were asked the time when he committed a crime which he has not admitted. In Plato's dialogues the imputed object is not an action but a knowledge, as, for instance, when (Phaedr. 276 A) Socrates asks whether another kind of teaching is not much

method. but his work remained incombeing only a programme deserving the attention of future investigators of Plato's style.

¹¹⁸ C. Martinius, 'Ueber die Fragestellung in den Dialogen Platos,' in the Zeitschrift für das Gymnasialwesen, xxer Jahrgang, Berlin 1866. pp. 97-119, and 497-516 (xiii).

¹¹⁴ C. Martinius, 'Ueber die Fragestellung in den Dialogen Platos und über eine besondere Eigenthümlichkeit derselben,' Jahresbericht über das Progymnasium zu Norden, 1871, 4to., pp. 1-18 (xiv).

better and more powerful, while he had not yet named that other kind and obtained assent as to its existence. Such questions were seen by Martinius (ii. pp. 9-13) in Gorg. 486 D, Rep. 414 B, 421 C D, Phaedr. 276 A, Theaet. 158 B, 187 C D, 190 E, Parm. 156 D, Polit. 278 A, 290 A, 302 B, Phil. 38 DE, Legg. 646 E, 691 B. We cannot include these quotations in our list of characteristics of later style, because Martinius did not profess to give a complete enumeration but only examples of each kind He seems not to have continued and of questions. completed these investigations, which are remarkable for their method and originality, and might serve as a starting point for anybody who undertook to realise the programme proposed by the ingenious Hanoverian teacher.

The problem of a classification of questions in Plato's dialogues already proposed by Ueberweg.

The problem of defining the differences between various modes of putting a question in Plato's dialogues had been also slightly broached by Ueberweg (Untersuchungen, p. 207), who observed that in the Sophist, the Politicus, and the Philebus, as also in the Timaeus, Critias, Laws, the play of question and answer becomes more and more conventional and more remote from the tone of natural conversation, approaching to the form of an uninterrupted lecture. The observation of such a peculiarity limited to only six dialogues (Soph. Polit. Phil. Tim. Critias Legg.) was in so far a very important first step in conscious determination of Plato's later style, since it could not well be attributed to chance.

First attempt of a methodic solution of the problem chronology by

No single characteristic of IX. LEWIS CAMPBELL. style, however important, suffices for general conclusions. as the case of Schöne shows. It is edifying to see the great contrast between Schöne's confidence and the modest caution with which stylistic inferences were justified by an author who alone enumerated and comof Platonic pared more characteristics of the style of Plato than all other investigators put together. This contribution to the study of Plato's style, still after thirty years the most important of all, is contained in the introduction means of to an edition of the Sophist and Politicus of Plato by the study Lewis Campbell, then Professor of Greek in the University of St. Andrews (1867).

of Plato's style.

Campbell 115 knew none of the authors enumerated above, and he approached the study of Plato's style quite independently, with the special purpose of determining the date of the dialogues which he edited while maintaining their genuineness. He had the original idea of going through Ast's Lexicon Platonicum and of finding out what words are peculiar to each dialogue in common with the group of Timaeus, Critias, Laws, which are recognised to be the latest works of Plato.

He assumed that a word, for which Ast quotes references only from a few dialogues, does not occur else-This assumption is probably correct in the great majority of cases, and is quite justifiable in a first general inquiry, though it would be desirable, after collecting such words as Ast quotes only from a few dialogues, to examine the bulk of Plato's text in order to be certain the special that they occur nowhere else. When Ast prepared his Lexicon Platonicum, more than seventy years ago, he could not foresee the importance now attached to precise reference; and for some particles, which have been specially investigated afterwards, and are peculiarly characteristic of Plato's later style (as, for instance, he edited. $\mu\eta\nu$), Ast quotes only a small number of the instances remarked by later writers.

Campbell based his investigation on Ast's Lexicon. and had purpose of determining the position of the dialogues

In the introduction to an edition of two dialogues, Campbell could not go into so many details as later investigators of Plato's style; he does not quote the single passages in which each word occurs, nor even all the words observed, and he condenses the results of a long and tedious labour into a few pages of dry

118 The Sophistes and Politicus of Plato, with a revised text and English notes, by the Rev. Lewis Campbell, M.A., Professor of Greek in the University of St. Andrews: Oxford, at the Clarendon Press, 1867 (xv).

enumeration (Introduction, pp. xxv-xxx), which, to be fully appreciated, needs more comments than the author cared to give. His observations are of such novelty, that, giving so many new facts, he left the reader to weigh them and to judge the correctness of the conclusions drawn with admirable sagacity by the author.

His work remained entirely unknown to all later investigators of Plato's style, and he did not insist on the importance of his discoveries.

Such readers as he had did not notice the importance of the evidence collected. Having brought together materials sufficient to prove that the Sophist and Politicus must have been written in Plato's old age, Campbell concludes with the modest phrase: 'If our hypothesis of the comparatively late origin of these dialogues is correct, the non-appearance of the Philosopher coincides with and renders more significant the abandonment of metaphysical inquiry in the Laws.' He had laid the first foundations of a new solution of the problem of Platonic chronology. Twenty-two years later, reviewing a German book, which on a much smaller basis proclaimed like results with much greater confidence, Campbell said 116 with equal candour: 'Now, if not before, it is clearly proved that the Sophistes, Politicus, Philebus, Timaeus, Critias, and Leges, in this order, or nearly so, form a separate group, and are the latest written . . . inquiries wholly independent of each other have led to this coincidence of result.'

Thus it is necessary to explain his obser-

An author capable of such self-effacement could not impress upon the reader his convictions as definitive truths, and, accordingly, Campbell's investigations remained entirely unnoticed for night hirty years. It

116 The Classical Review, February 1889, pp. 28-29, review of C. Ritter, Untersuchungen über Plato, by Lewis Campbell.

117 The first public recognition of the exceptional importance of Campbell's investigations on the style of Plato is contained in the vol. ix. pp. 67-114 of the Archiv für Geschichte der Philosophie (October 1895) in an article 'Ueber Echtheit Reihenfolge und logische Theorien von Platos drei ersten Tetralogien' and in the Bulletin de l'Académie des sciences de Cracovie, October 1895 pp. 268-277, where the Polish work O pierwssych treech

was also not suspected that the introduction to an edition vations of the text of two isolated dialogues could contain a capital inquiry into the vocabulary of all the works of Plato. Under these circumstances it may be well to recall Campbell's chief observations, the more so as these should be repeated, in order to give them greater exactness than can be afforded by our confidence in the relative completeness of Ast's lexicon.

in order to enable others to repeat them.

Assuming, with all competent writers, that the Laws, He chiefly as well as Timaeus and Critias, belong to Plato's latest period, Campbell sought for peculiarities of style which, being common to these works, are also observed in others. He found the following points in which the Sophist and Politicus, partly also the Philebus, are similar to the Timaeus, Critias, and Laws:

sought for peculiarities which denote the similarity of Sophist, Politicus. and Philebus to Timaeus, Critias. and Law: . Analogy between the tetralogy planned in the Sophist

12. The Sophist and Politicus are both the middle pair of an unfinished tetralogy, sketched out in the second dialogue of the series; so are the Timaeus and Critias (Introduction, p. xix). In both tetralogies the plan of the four consecutive dialogues was not indicated in the first of the series. Neither in the Republic is there any hint as to the author's intention of writing the Timaeus, Critias, and Hermocrates; nor is there in the Theaetetus any clear indication concerning the Sophist, the Politicus, and the Philosopher as an intended continuation. In both tetralogies the fourth dialogue remained unwritten. There is no evidence that Plato ever wrote the Hermocrates announced in the Timaeus, or the Philosopher announced in the The first dialogue of both tetralogies is conducted by Socrates, while in the second and third Socrates remains a listener, who merely proposes the subject of conversation at the outset. The idea of planning out four consecutive dialogues as one larger

tetralogiach dzieł Platona, by W. Lutosławski, is announced. In France Campbell's discoveries became known only after a lecture delivered on May 16, 1896, in the Institut de France, in Paris, before the Académie des sciences morales et politiques, and published in vol. cxlvi. of the Compte rendu des séances et travaux de l'Académie des sciences morales et politiques, also apart with an additional preface: W. Lutosławski, Sur une nouvelle méthode pour déterminer la chronologie des dialogues de Platon, Paris, H. Welter, 1896. More detailed is the account of Campbell's investigations in the Polish work of the same author, 'O pierwszych trzech tetralogjach dzieł Platona,' published by the Cracow Académie des Sciences in vol. xxvi. pp. 31-195 of the philological memoirs of that society, and also in a separate volume, Cracow 1896.

and that which is sketched in the Timaeus. whole corresponds to the great length of the last work of Plato, the Laws. It is also psychologically plausible that Plato, grown old, had more to say, and said it in an ampler manner. His recognised earliest productions, the so-called Socratic dialogues, are much shorter than the works of his mature age. The most obvious reason which prevented him from finishing the two intended tetralogies is the shortness of life, and this alone would lead us to ascribe the second and third dialogues of these unfinished tetralogies to a later time than both first parts: that is later than the Republic, and later than the Theaetetus. On the other side the Republic and Theaetetus being singled out among all the other works by the circumstance that a continuation to them has been given, it seems probable that this relation of both to later dialogues is due to their relatively late date, because Plato is more likely to have connected his latest works with those preceding them, than with works written very much earlier. If we take into account also that the Laws differ from all earlier dialogues by their volume, and that they may be considered as consisting of at least four parts, we may observe that the late peculiarity of uniting several dialogues into a larger whole extends to Soph. Polit. Tim. Critias Legg. (and to a certain degree also to Rep. and Theaet.)

no longer the chief teacher in Timaeus. Critias. Laws. nor in the Sophist and Politicus. and he appears as a pupil of Diotima in the Symposium, of Parmenides in

the Par-

menides.

Socrates is

13. The Sophist and Politicus, as well as Timaeus, Critias, Laws, also in some degree the Parmenides and Symposium, are the only works of Plato in which Socrates is not the principal figure in the conversation, and in which other teachers take his place (Introduction, p. xix). While these are named in the Symposium, Parmenides, Timaeus, and Critias, they are but unnamed abstract personalities in Sophist, Politicus, and Laws. The stranger from Elea, the Athenian stranger, are representatives of pure reason and experience, while the Platonic Socrates of other dialogues is generally a concrete personage, with a certain historic idiosyncrasy, although freely adapted to the expression of Plato's theories. The predominance of other teachers over Socrates characterises only seven dialogues: **Soph. Polit. Tim. Critias Legg.** and to a certain degree Symp. and Parm.

14. The exposition in the latest works is chiefly didactic (Introduction, p. xx), and the Socratic dissimulation of knowledge, still appearing in the Theaetetus, is definitively forgotten. 'The Philosopher guides his pupil by a path familiar to himself to conclusions which he foreknows' (p. xx). 'The speakers are playing at a laborious game (Parm. 187 B) to which they are evidently not unaccustomed, and which proceeds according to certain rules' (p. xxi). With no sudden gust of eloquence as in the Republic or Theaetetus, but with a gravity akin to solemnity, Plato discusses in these works subjects loftier than those proposed at the outset, and displays a fixed conviction of human nothingness.

This refers to: Parm. Soph. Polit. Phil. Tim. Critias Legg.

- 15. From the conversational freedom of the Republic we are led to scientific exactness and compression (Introduction, p. xv); there is an air of self-imposed restraint; an appearance of studied order and arrangement becomes manifest also in the occasional reference to earlier dialogues, as in the Soph. 217 c the Parmenides is quoted, in the Soph. 216 A the Theaetetus, in Polit. 284 B the Sophist, in Tim. 17c the Republic, in the Critias 106 B the Timaeus, and less clearly in the Laws 711 A, 712 A, 739 BCD, the Republic. the 'preludes' and 'recapitulations,' disdained in the Phaedrus, are quite as common in the Sophist and Politicus as in the Laws, the Timaeus, and Critias (p. xxiii). This care for form, while the perfection of form wanes, may be best explained by the increasing preoccupation with the philosophical contents, peculiar to the writer's old age. The dry light of reason accompanied the decline of poetical grace and power. A vein of refined and caustic satire succeeds to the simple and playful humour of earlier times (p. xix). This special and evident care for exactness of expression, leading to a fixed terminology, belongs to: Parm. Soph. Polit. Phil. Tim. Critias Legg.
- 16. The periods are more elaborate and less regular than in the Republic: (Introduction, p. xxxviii) Soph. Polit. Phil. Tim. Critias Legg.
- 17. The natural order of words is more often inverted, and the terminohyperbaton in the use of particles is specially frequent (p. xxxvii): logy. Soph. Polit. Phil. Tim. Critias Legg.
- 18. The monotonous recurrence of a certain rhythmical cadence (Introduction, pp. xx and xl) under the increasing fascination of rhythmical linguistic music: Soph. Polit. Phil. Tim. Critias Legg.
- 19. Careful balancing of words so as to relieve the tediousness of a prolonged phrase by the counterposition of noun and epithet, verb and participle, subject and object, and by the alternation of emphatic and unemphatic words (Introduction, p. xli): Soph. Polit. Phil. Tim. Critias Legg.
- 20. The adjustment of long and short syllables so as to quicken in the or retard the movement of the sentence. Sometimes short syllables are accumulated as in choric metres; more often a sentence is concluded with an iambic hemistich, or with a dochmiac, each generally terminating with a dissyllable, which is often divorced from the immediate context (Introduction, p. xlii): Soph. Polit. Phil. Tim. Critias Legg.

For all these peculiarities Campbell quotes examples These which need not be repeated here, because points 16-20 points

The latest seven dialogues have a more pronounced didactic character than all earlier works. We notice in them a methodic proceeding and quotations of earlier works; a special care for form and Phraseology more elaborate. Inversion frequent. Phonetic effects sought for. Symmetry order of words and even in the order of

syllables.

should be investigated again. Avoiding of the hiatus later observed by Blass. Of many grammatical peculiarities observed and quoted by Campbell only one

can be in-

cluded in

our list

because

attempt complete-

ness of

tion.

enumera-

he did not

deserve renewed inquiry, as they have not been treated exhaustively.

21. The avoiding of the hiatus, a peculiarity of the same order, though not expressly noticed by Campbell in 1867, is implied in the influence of rhetorical artifice on Plato, to which Campbell directs our attention (p. xl). According to later investigations of F. Blass ¹²² (1874) the avoidance of hiatus is limited to the following dialogues: **Soph. Polit. Phil. Tim. Critias Legg.**

22. The use of the Ionic dative plural in σ_i was indicated by Campbell (p. xxiv) as a characteristic of later style. Its occurrence has been later exactly determined by C. Ritter, and found only in: Rep. 6 Phaedr. 3 Polit. 4 Tim. 2 Legg. 85 (C. Ritter, Untersuchungen, p. 9; also Jowett and Campbell, Republic, vol. ii. p. 52).

Some other grammatical peculiarities of later style, observed by Campbell, as: perfects with present meaning, participles with auxiliary verb, neuter article with the genitive to express the abstract notion of a thing, ellipse of $\tau \delta$ $\mu \ell \nu$ etc. with $\tau \delta$ $\delta \ell$ etc. following, redundant or explicit use of the participle, repetition of a verbal notion which has been already expressed or implied (Introduction, pp. xxiv-xxvii) cannot be included in our list, because they are indicated without a complete quotation of their occurrences in all the writings of Plato. These points ought to be investigated anew by some philologer acquainted with Campbell's work, and they would yield very interesting results.

Lexicography. The vocabulary of Plato's later works is very original, containing many words The most important peculiarity of Plato's vocabulary in his later works is its originality, leading the author to invent many new words, or to mould old words to new ideas with an affectation of variety and minuteness of distinction (Introduction, p. xxx). In the Laws Campbell found 1,065 words occurring nowhere else, on 317 pages of text (ed. Stephani; Campbell quotes 345 pages because he did not take into account the space without text at the end of each book). This yields a proportion of 336 original words to each 100 pages, an originality of vocabulary absent from earlier works of Plato. The Timaeus and Critics show

the same tendency to the use of rare words, as they have used on 90 pages 427 words unused elsewhere by Plato. only This raises the proportion to 474 original words in 100 It does not imply that Plato in writing the Timaeus and Critias tends to a greater use of new and rare words than in writing the Laws, for physics exceed politics in the opportunities for such usage. In such a political treatise as the Laws, 336 new words to 100 pages show as great a leaning to an original vocabulary as 427 new words to 100 pages in a physical treatise. to the Sophist and Politicus taken together as one whole. in 107 pages there are 255 new rare words not found elsewhere in Plato, a proportion which corresponds to that of 239 in 100 pages. That this bent towards the use of rare But this words was increasing we can easily see by comparing the three dialogues which were avowedly written by Plato in succession. In the Theaetetus he employs 93 new words unused elsewhere, that is 133 to 100 pages (ed. Steph.), in the Sophist 187 to 100 pages, in the Politicus 295 to 100 pages; but in the Philebus only 100 to 100 pages, and in out all the the Phaedrus 326 to 100 pages. (These last numbers are works of given in vol. ii. of the edition of the Republic by Jowett and Campbell, pp. 53-55.) It is to be regretted that nobody has as yet calculated these proportions for the Parmenides, Republic, and for earlier dialogues. The terms. numbers given by Campbell refer only to: Phaedr. Theaetet, Soph. Polit. Phil. Tim. Critias Legg.

peculiarity has not yet been investigated through-Plato like the recur-

rence of

fixed

This originality of vocabulary is a very powerful argument in favour of the late date of the Sophist and Politicus, but cannot be included in our list of marks of later style, so long as comparative statistics about all the works of Plato in this respect are not established.

The absence of a fixed terminology, which is observed by readers of the earlier dialogues, is less noticeable in the Sophist and later works. In all these dialogues a great number of rare words recur, besides those used

only once, and this repetition of new and rare words shows an inclination to 'fix in language some of the leading generalisations of philosophy' (Introduction, p. xxx).

Some
words
used in
Timaeus,
Critias,
Laws,
occur
besides in
only one
of the
earlier
dialogues.

Taking the Timaeus, Critias, Laws, as containing Plato's latest terminology, Campbell counted the words which each dialogue shared with this latest group, and which occur nowhere else in Plato. If we reduce the numbers given by Campbell to the proportion of 100 pages, and if we allow a correction consisting in counting as common and peculiar to Sophist and the group of the Laws also those words which, besides these four dialogues, have been used only in Politicus—then we have in the Sophist to 100 pages 108 new words common and peculiar to the Sophist and to the group of the Laws. In the Politicus the number of such words rises to 136 in 100 pages, counting also those which besides occur only in the Sophist. Of the other Platonic dialogues, the Phaedrus alone shows a vocabulary which in almost equal measure approaches that of Plato's recognised latest writings, containing a proportion of 117 rare words to 100 pages (ed. Steph.), which apart from this dialogue are used only in the group of the Laws. This does not necessarily prove that the Phaedrus belongs to the same epoch, since, the Phaedrus being in more senses than one a programme, and a work of rare poetic richness and artistic excellence, it is natural that Plato should have retained in use many words there first employed. Among the other writings, the Philebus affords a remarkably low proportion of such words. They are only sixty-two to 100 pages, though in many other respects the Philebus is more nearly related to the Sophist and Politicus, and also to the group of the Laws, than the Phaedrus. This low figure is explained by the circumstance that no account was taken of such words as occur, besides in Philebus and the latest three dialogues, also in Sophist and Politicus. Assuming that Plato wrote the Philebus at about the

This allows a measure of affinity between each dialogue and the latest group.

same time as the Politicus, it would be natural that he should use in both some rare words peculiar to the group of the Laws. Allowing for such words, the figure rises to ninety-two rare words in 100 pages (ed. Steph.) common and peculiar to the Philebus with the latest three dialogues. The importance of these figures is apparent on comparison with those of other works in which Campbell counted the words peculiar to the group of These are seen from the table on the next page (calculated on Campbell's table, p. xxxiii).

In this table some anomalies require explanation. This first The Protagoras, being an early dialogue, has more words peculiar to the latest group than could have been ex-To explain this we should require to know what words these are, because if they refer to some special subject treated in the Laws as well as in the Protagoras, the coincidence would be natural. Later inquiries have not confirmed such an affinity between the Protagoras and the latest dialogues. On the other side the numbers tus, and for the Theaetetus and Parmenides are remarkably low. This might be explained by the circumstance that Campbell according to his method did not include in these numbers those words which, besides occurring in each of these dialogues, are found in some other dialogue investigabelonging to the same epoch. The correction of the error tions to be resulting from this omission can be made here only for the Sophist, Politicus, and Philebus, and has altered very much the proportions given by Campbell. Really, if a word is peculiar to the latest dialogues and is found besides in two other works, the occurrence of this word in these two works is as much a sign of affinity between them and the latest group as (and is perhaps more significant than) if the occurrence were limited to one dialogue besides the The Theaetetus has many words in three latest works. common with the Republic, the Parmenides many words in common with the Theaetetus and Sophist, as later investigations have sufficiently shown. All these words were

table of affinity requires corrections as to the Parmenides. Theaete-Philebus, which have been shown by nearer to the Laws.

Observations.

¹ The dialogues are in their presumed chronological order, as resulting from the sum of stylistic observations, 1834-1896; in some doubtful cases, as for the first six small dialogues, the traditional order preserved in Manuscripts (tetralogies) has been maintained. The Republic is placed between Phaedo and Phaedou, with reference to tagreeter part of it, though it is supposed that the beginning of the Rep. was written before the Phaedo, and some other parts after the Phaedrus. Those which have no logical importance and will not be dealt with in the present work (Menex., Ion, Hipp. I., Alc.) are omitted and follow only in this table after the Laws.

These numbers are not given by Campbell, but are elegisted on his inversion! write.

These numbers are not given by Campbell, but are calculated on his 'numerical ratios.' ² The pages ed. Didot are more equally printed than in any other edition; and they form

the best measure of the amount of text.

Corrected after elimination of an error resulting from the circumstance that Campbell counted in Rep. and Legg. also some pages without text, between every book and the following.

This number contains the words common to Tim. Oritias with Legg., and those occurring in Tim. Oritias, and nowhere site, according to J. and O., Rep. Vol. II. p. 87.

This number contains the words common to Tim. Oritias with Legg., and those of Legg.

Including five such words which also occur in Polit.
 Including five words which are also found in Soph.

Including eight such words, which are also found in Soph. Polit.

1 This number results from the ratio 1 given by Campbell, counting 295 pp. as he counted. The proportion is increased through the omission of pages without text.

1 From the ratio given by Campbell the result would be 3 words; he may have found

three or four.

excluded by Campbell from the number of words 'common and peculiar' to each dialogue with the group of the Laws. Thence, partly, the low figures for Theaetetus and Parmenides. As to the Parmenides, the very peculiar The and exceptionally abstract contents of this dialogue also make it impossible to find many rare words in it, because the greatest number of rare words refer to concrete objects. Apart from these easily explained exceptions, with Campbell's observations, as represented in the above table, Timaeus, show clearly that the Sophist, Politicus, Philebus, also Critias. the Republic and Phaedrus, have the greatest affinity in Laws, is vocabulary to the latest dialogues. There results the following important addition to our list:

affinity of Sophist, Politicus. Philebus. evident.

23. Occurrence of rare words common and peculiar to each dialogue with the latest group once or more in each page (ed. Didot) is confined to: Rep. 246 Phaedr. 61 Soph. 57 Polit. 75 Phil. 52 Tim. and Critias 508 Legg. 1146, while such words are scarcer, but still occur more than once in two pages in: Symp. 33 Phaedo 42 Theaet. 27.

Campbell found by this method over seven hundred characteristics of the later style of Plato, each word recurring in certain dialogues being as much a peculiarity of the style of these dialogues as any of the more general stylistic properties. He inferred that the The Theaetetus and Phaedrus form with the Republic an group of earlier group (p. xxxix) than Sophist, Politicus, and Philebus, and that these more nearly approach Timaeus, Critias, Laws in their style than any other works of Plato. He could not have so correctly recognised the middle group of Republic, Phaedrus, and Theaetetus, had nised by he simply considered the number of characteristic Campbell, peculiarities, without taking into account also their The weighing of evidence in every kind of statistics is the indispensable condition of correct conclusions, and Campbell has shown a surprising power of divination in connecting the Theaetetus and Phaedrus Phaedrus with the Republic in face of the purely numerical data he much

Republic, Phaedrus. Theaetetus also recogthough his evidence at first sight placed the later and the Theaetetus much earlier.

had collected. All later inquiries have confirmed this connection and removed the anomalies which Campbell's statistical table still offered. Had Campbell relied blindly on numbers alone, he would have concluded according to the evidence afforded by his observations that the Parmenides is one of the earliest works of Plato, as Schleiermacher imagined; that the Theaetetus belongs, as Zeller thinks, to about the same period as the Protagoras; and that finally the Phaedrus is later than the Philebus. These natural errors he happily avoided and this gives to his work a methodic value far above everything done after him in the study of Plato's style, since later inquirers frequently discredited their method by unjustifiable generalisations from a single occurrence of a single expression in a small dialogue, as for instance of $\tau \ell \mu \dot{\eta} \nu$ in the Lysis.

The Parmenides has a poor vocabulary, but it contains,

24. yévos as a logical term: Phaedr. 1 Parm. 3 Soph. 4 Polit. 1

25. δεσμός, as a bond uniting ideas: Parm. Soph. Polit. Phil.

Tim. Legg. (This special meaning has not been distinguished by

evidence. wherein

as Campbell has shown, some highly characteristic words (Introduction, pp. xxv-xxx compared with Ast's Lexicon as to the number of occurrences). all later

investigators. The Parmenides contains some sig. nificant terms re-

cabulary of the Philebus Ast, and Campbell does not give the number of occurrences.) 26. μέθεξις: Parm. 3 Soph. 2 (A). 27. μερίζω: Parm. 4 Soph. 1 Polit. 2 Tim. 3. 28. πολιός: Parm. 1 Polit. 1 Tim. 1.

Phil. 2 Tim. 7 Legg. 1.

Also the vocabulary of the Philebus, though less rich than that of the Politicus, is quite sufficient to indicate the place of this dialogue. Of words used in the Philebus, Campbell enumerates the following as very characteristic terms common to later dialogues (Intro. pp. xxv-xxx):

29. γένεσις, in the sense of production in general: Soph. Polit. Phil. Tim. Legg. (A).

30. σύμμιξις: Soph. Polit. Phil. Tim. Legg.

31. ύλη, in the general sense of matter or in a sense approaching this: Polit. Phil. Tim. Critias Legg.

32. σχίζω: Soph. Polit. Phil. Tim.

But he avoided errors, carefully weighing his

his method surpassed the method of

curring in later works. The vo-

is poor but very charac33. διαμερίζω: Polit. Phil. Legg.

34-36. ἄμετρος, διάκρισις, σῶμα (= body in general): Soph. Phil. Tim. Legg.

37-38. σύγκρισις, διάθεσις: Soph. Phil. Tim. Legg. (A).

39. διαχωρίζω: Polit. Phil. Tim.

40-41. διαλυγίζομαι, ἐπίκλην: Soph. Phil. Tim.

42-43. στέλλομαι, ἀπιδεῖν: Soph. Phil. Legg.

44. ἀγήρως: Polit. Phil. Tim. Legg.

45. πλάτος: Polit. Phil. Critias Legg.

46-48. συγκεφαλαιούμαι, ενάριθμος, δοξοσοφία: Soph. Phil.

49-51. πηξις, σύγκρασις, καταπαύω: Polit. Phil.

52. ἀνειλίττω, in Phil. corresponds to ἀνείλιξις in Polit.

53. μέχριπερ: Soph. 1 Polit. 3 Phil. 1 Tim. 4 Critias 1 Legg. 16. (The number of occurrences for this word was found later by C. Ritter, see p. 59 of his Untersuchungen über Plato. In all other dialogues $\tilde{\epsilon}\omega\sigma\pi\epsilon\rho$ is used, which occurs also concurrently with μέχριπερ and oftener than this, except Tim. Critias Legg. in which both words occur an equal number of times, according to Dittenberger.)

One glance at these words shows for what kind of This notions Plato sought new terms in his later writings. shows the Eight words refer to division and reconstitution of unities (30, 32, 33, 35, 37, 39, 49, 50) which Plato had proclaimed in the Phaedrus (266 B) as a divine art, worthy of the greatest admiration. Four words indicate logical operations (40, 42, 43, 46), six physical and mathematical notions (29, 31, 36, 38, 45, 52). This agrees perfectly with what we know of Plato's latest investigations. His dream was a general theory of science and classification of human knowledge.

Campbell's study of the vocabulary of the Sophist and Politicus confirms the above enumerated general analogies between these dialogues and the group of the Laws. Striking, indeed, is the number of words used by Plato only in the Laws and in one of these dialogues.

The following twenty-six words, first used in the terms Sophist, recur in the Laws (Intro. pp. xxv-xxx):

54. * ἀγκιστρευτικός in Soph. corresponds to * ἀγκιστρεία in Legg.

55. * ένυγροθηρικός in Soph. corresponds to * ένυγροθηρευτής in Legg.

teristic, as it contains a great number of logical terms recurring in Timaeus or Laws.

influence of logical studies.

The Sophist and Politicus are still richer in proper to Plato's later style, denoting

dialectical, physical, and
mathematical
notions.

- 56-58. * νουθετητικός, * συνομολογία, * συνδιαπονῶ: Soph. Legg.
- 59-68. ἀγωνιστική, βιαστικός, εἰκαστική, εἰρωνικός, φαρμακοποσία.
- 64. δρνιθευτικός in Soph. corresponds to δρνιθευτής in Legg.
- 65-68. Terms expressing logical operations: διάγνωσις, μερίς, παρωνύμιον, προσκοινωνῶ: Soph. Legg.
- 69-73. Poetical words: άθφος, ἄπλετος, ξένιος, παραφροσύνη (in Soph. corresponds to παράφρων in Legg.), πλαστῶς: Soph. Legg.
- 74-79. Compounds and derivatives: ἀκρατής, ἀνάστατος, ἀφερμηνεύω, σκοτοδινία, τολμηρός, μίσθωσις (A): Soph. Legg.

The following forty-three words occur in the *Politicus* and in the *Laws* (Intro. pp. xxv-xxix):

- 80-84. ἀμυντήρως, παίγνων, πλεκτικός, σκέπασμα (A), στασιαστικός (in Polit. corresponds to στασιωτεία in Legg.): Polit. Legg.
- 85-89. Dialectical terms: ἀπομερίζω, ἀποσχίζω, ἐκκρίνω (ἔκκριτος Legg.), ἐπινέμω, †γνώρισις: Polit. Legg.
- 90-100. Physical and mathematical: ἀνατολή, ἄφεσις (A), γυμναστής, * δρυστομική (in Polit. corresponds to * δρυστομία in Legg.), ἐπισκευάζομαι, ἐπισπεύδω, μέτρησις, μετρητός, * συμποδηγοῦμαι (in Polit. corresponds to ποδηγεῖν in Legg.), ὑπεροχή, ὑφή: Polit. Legg.
 - 101. ἀθεότης: Polit. Legg.
- 102-108. Poetical: ἀντάξιος, γειτονῶ, εὐώνυμος, ἡσυχαῖος, κρηπίς, σύνδρομος (A), σύντροφος (A): Polit. Legg.
- 109-122. Compounds and derivatives: ἀφύλακτος, ἔγκαιρος, ἔκδοσις, ἐμπορευτικός (in Polit. corresponds to ἐμπορεύομαι in Legg.), εὐλαβής, ἰταμότης (in Polit. corresponds to ἰταμῶς in Legg.), μηνυτής, μοναρχία, προσμίγνυμι, προστυχής, συγκατασκευάζω, ἡρεμαῖος (Å), θυραυλεῖν (Å), νομοθέτημα (Å): Polit. Legg.

Abundance of words borrowed from the poets and unusual com-

pounds.

The following are found only in the Sophist or Politicus, and in the Timaeus or Critias:

123-127. Dialectical: καθαρτικός (A), ἄσχιστος (A), διακριβολογοῦμαι, προομολογοῦμαι, διαθμαύω: Soph. Tim.

128–130. Physical: διηθεῖν (A), εὔκυκλος (used first in a quotation from the philosopher Parmenides), ἰσοπαλές (also from Parmenides): Soph. Tim.

131-132. Poetical: διαπεράω, κρυφαίος: Soph. Tim.

133-134. Compounds or derivatives: μεθημερινός, τὰ φωνηθέντα : Soph. Tim.

135-141. διαλυτικός, κατακόσμησις, καταθραύω, παράλλαξις, συμπιλώ, συνυφαίνω, συλλαγχάνω: Polit. Tim.

142. ἀνακύκλησις (in Polit. corresponds to ἀνακυκλοῦμαι in Tim.).

148-144. διορισμός (A), συναπεργάζεσθαι (A): Polit. Tim.

145-146. * κύκλησις, * ραφή: Polit. Tim.

147-148. βρόχος, τηκτός: Soph. Critias.

149. διαλαγχάνω: Polit. Critias.

Many words enumerated by Campbell are not limited Some of to two dialogues, being in different ways characteristic of these later style:

words are found in more than two dia-

logues.

150-155. * διαπορῶ, * ὅπηπερ, κύρτος, παράφορος (in Soph. Legg. corresponds to παραφορότης in Tim.), συμφυής, χερσαίος: Soph. Tim. Legg.

156-158. ἐπεύχομαι, άγιος, χαλεπότης: Soph. Critias Legg.

159-165. * διανόησις, ἀπλανής, προβολή, τροπή (as an astronomical term), δεσπότις, τριπλοῦς, πάμπαν (A): Polit. Tim. Legg.

166-167. ἀγράμματος, στέγασμα: Polit. Tim. Critias.

168-170. σύνολος (A), ξαίνω, εὐπρεπής: Soph. Polit. Legg.

171. συνεφέπομαι: Soph. Tim. Critias Legg.

172-173. σύννομος (A), περιλείπω: Polit. Tim. Critias Legg.

174-176. ἔνυδρος (A), τομή (metaphorical), πλέγμα: Soph. Polit. Tim. Legg.

Some words are limited to Sophist and Politicus only (Intro. pp. xxvi-xxix):

177-181. * ἀμφισβητητικός, * γναφευτικός, αὐτοπώλης, ἀπερημόω, συντέμνω: Soph. Polit.

Here we have a list of 158 characteristic words observed by Campbell in more than one of the six latest dialogues of Plato, and showing clearly the direction of Plato's tendency to use rare and new words in his old age. Besides these Campbell enumerates 93 words used by Plato in the Sophist and nowhere else, and 157 words used only in the Politicus. Among these 250 words portance whose use is limited to a single dialogue, 60 have not been used by any other Greek author (14 in Sophist and 46 in Politicus), and 39 have passed into the language of Aristotle (14 from Sophist and 25 from Politicus). The numerical proportions of all these peculiarities of vocabulary may readily be seen from the table based on Campbell's enumerations, given on p. 98.

In addition to these, Campbell gives also a list of Campbell fourteen words which, without being peculiar to the later has thus dialogues, occur with greater frequency in them than in Plato's other writings. Among these φράζω, ἀπεργάζομαι. προαιρείσθαι, φύλον, ἐμφανίζω, φαντάζεσθαι, ἀπόφασις,

ρηθέν, πρόσρημα, the indefinite πότερος, are characteristic late date of the increasing logical interest, while περιέχω, περιλαμβάνω, μετρητικός, μέτοχος illustrate the fondness for compounds and derivatives. The number of stylistic characteristics observed by Campbell in the latest group thus reaches 434, of which twelve are of a general character. 255 refer only to Sophist or Politicus, 153 are common to these two with the latest three dialogues (twenty-five to the Philebus with the preceding two groups), and fourteen refer to the increased frequency of words also used in earlier dialogues. Till it be shown that as many peculiarities unite the Sophist, Politicus, Philebus with some other dialogue, we have good reason to follow Campbell in joining them with the group of Timaeus, Critias, and Laws.

of the Sophist, Politicus, Philebus.

X. RIDDELL. At the same time, another editor of Riddell's another dialogue of Plato undertook an almost equally laborious investigation on the style of Plato, with this difference, that the friend who published it took the precaution of mentioning it in the title of the edition. James Riddell, 118 late fellow and tutor of Balliol College, Oxford, buried in his edition of the Apology of Plato an appendix of 135 pages under the title Digest of Platonic Idioms. He classifies the idioms used by Plato and quotes examples of all dialogues, but without aiming at complete enumeration, and without being aware of the bearing of such stylistic researches on Platonic chronology. Though the Apology has more readers than the Sophist, Riddell's Digest of Idioms remained almost as unnoticed, at least out of England, as Campbell's Introduction to the Sophist. As Riddell does not compare the relative frequency of each idiom in each dialogue, little can be gained from his enumerations for the chronology, because idioms are less often limited in their occurrence to a few

Digest of Platonic idioms, however valuable, affords no chronological conclusions.

¹¹⁸ The Apology of Plato, with a revised text and English Notes, and a digest of Platonic idioms, by the Rev. James Riddell, M.A., fellow and tutor of Balliol College, Oxford, 1877 (misprinted for 1867) (xvi).

dialogues than peculiar words. Still at least one very characteristic idiom observed by Riddell is peculiar to the latest dialogues alone:

182. The periphrastic use of the participle, with auxiliary verb substantive (p. 167): Soph. 1 Polit. 4 Tim. 3 Legg. 1.

but confirms the authenticity of the Sophist and Politicus.

For those who assert with Schaarschmidt that the style of the Sophist, the Politicus, and Philebus is un-Platonic, it may be interesting to learn that Riddell found in the Sophist forty Platonic idioms belonging also to other dialogues whose authenticity is beyond even Schaarschmidt's suspicions. In the Politicus he found thirty-six such idioms and in the Philebus forty-five. Few dialogues are as much quoted in the 325 paragraphs of this interesting monograph as the Sophist, Politicus, Philebus, Timaeus, and Laws.

Other authors on Plato's style neglected chronology. XI.-XII. SCHANZ, LINGENBERG. Shortly after the labours of Campbell and Riddell, Schanz ¹¹⁹ (1870) wrote on the hypothetical period in Plato, but at that time he, like Lingenberg ¹²⁰ in his dissertation (1874) on metaphors and proverbs in Plato, left the question of chronology out of sight.

XIII. IMME. The same indifference to chronological arrangement appears in a dissertation of T. Imme on the forms of interrogation ¹²¹ (1873) in Plato. This author limited his work to an attempt at classifying interrogations psychologically, and quoted for each kind only a few examples, insufficient for chronological inferences. In this case the author's ignorance of the work of others on the same subject has done him much wrong. Had

¹¹⁰ M. Schanz, Bifurcation der hypothetischen Periode nach Platon, 1870 (xvii).

¹²⁹ W. Lingenberg, *Platonische Bilder und Sprichwörter*, Köln, without date, but published 1874 (xviii). The author enumerates proverbs on God, men, products of human activity, proper names, uses and customs, and literary proverbs.

¹²¹ Th. Imme Culmensis (of Chelmno), De enuntiationum interrogativarum natura generibusque psychologorum rationibus atque usu maxime platonico illustratis, doctor. dissert. Lipsiae 1873 (xix).

Imme known the dissertations of Martinius, he might have made an instructive and interesting addition to our knowledge of Plato's style. But he quotes only examples of each kind of interrogation without aiming at an exhaustive enumeration.

XIV. Blass. Another scholar, F. Blass, 122 the author of the History of Greek Eloquence (1874), made a very curious observation, thereby unexpectedly confirming Campbell's conclusions, though unaware of Campbell's work. He remarked that the hiatus is less frequent in the Phaedrus than, for instance, in the Symposium, and that it is still more rare in Sophist, Politicus, Philebus, Timaeus, Critias, and Laws, where the hiatus is chiefly limited to very frequent words as $\kappa a l$, ϵl , $\tilde{\eta}$, $\mu \hat{\eta}$ or the article, while all kinds of hiatus are frequent in the Republic and earlier works. Blass inferred from this single observation that Soph. Polit. Phil. Tim. Critias Legg. were the latest writings of Plato.

XV. Roeper. When four years later (1878) Roeper 123 published his investigation on the dual number in Plato, he knew none of the twenty contributions to the knowledge of Plato's style which have been mentioned above. He distinguishes two different uses of the dual in Plato: in earlier writings, the common use as in the current language of the fifth century B.C., and in later writings, at the time when the dual fell into disuse, Plato employed it intentionally to lend a phrase an air of solemnity. This usage is shown by Roeper to be frequent in Soph. Polit. Phil., though not limited to these dialogues. Very characteristic of a time when the use of the dual began to be abandoned is:

183. δυοίν with the plural of a substantive (p. 26): Prot. 1; Rep. 1; Soph. 1 Polit. 1 Phil. 1 Legg. 2 (Prot. 355 B and Rep. 546 c

Roeper distinguished a solemn and intentional use of the dual from the primitive common use.

 ¹²² F. Blass, Attische Beredsamkeit, vol. ii. p. 426, Leipzig 1874 (xx);
 also on Dittenberger in Bursians Jahresbericht, vol. xxxiii. p. 234, for 1883.
 ¹²³ Augustus Roeper, Gedanensis, De dualis usu Platonico (doctor's dissertation univers. Bonn), Gedani 1878 (xxi).

are held doubtful by Roeper, but these passages must be counted on the authority of the best MS.).

Many uses of dual forms are either limited to the latest group or increasing in frequency.

Other peculiarities of later style observed by Roeper, but not singled out as such by him, are:

- 184. Article ταῖν (p. 17): Polit. 1 Tim. 1 Legg. 3.
- 185. τὼ δύο without substantive (p. 25): Soph. 2 Polit. 1 Legg. 2 (generally in other passages τὰ δύο).
- 186. νῶν (p. 16): Symp. 1; Phaedr. 1 Theaet. 1; Soph. 1 Polit. 3 Phil. 4 Legg. 2.
- 187. Adjectives and participles in -auv (p. 5); Rep. 1; Soph. 1 Polit. 1 Tim. 1 Legg. 3.
- 188. $\tau \acute{\epsilon} \chi \nu a$ as dual of $\tau \acute{\epsilon} \chi \nu \eta$ (p. 5): Rep. 2; Soph. 1 Polit. 1 Legg. 1.
 - 189. Subst. in -air (p. 6): Rep. 2; Parm. 1 Polit. 2 Legg. 6.
- 190. Dual of substantives neutr. in $-\eta$ (p. 12): Rep. 2 Phaedr. 1 Theaet. 1; Soph. 4 Polit. 1 Phil. 1 Tim. 2 Legg. 2 (counting only indubitable dual forms; besides these Roeper quotes many passages in which such forms may be either plural or dual, occurring chiefly in Soph. Polit. Legg.).
- 191. Dual in \bar{a} (p. 3) 'nominum, quorum etiam in ω formas licebat praeferre': Symp. 1; Rep. 2 Theaet. 1; Polit. 2 Legg. 1.
- 192. Dual $\tau o \acute{\nu} \tau \omega$ gener. communis (p. 4): Rep. 2 Phaedr. 1 Theaet. 3; Phil. 1 Legg. 2. Similar to this are also $\pi o \acute{\nu} \omega$ Theaet. 175 c and $\mu \acute{\nu} \nu \omega$ Legg. 777 c.
- 193. Dual of nouns in -ow II decl. with $\partial_{\mu}\phi o\hat{\nu}$ (p. 11): Prot. 1; Rep. 2; Parm. 1 Polit. 1 Phil. 1 Critias 1.
- 194. $\sigma\phi\hat{\varphi}\nu$ (p. 16): Euthyd. 4; Theaet. 1; Legg. 12. This coincidence between Euthyd. and Legg. Roeper explains by the circumstance that in both dialogues one person is speaking to two others, intimately associated.
- 195. $\delta \dot{\nu} \omega$ instead of $\delta \dot{\nu} \nu$, according to the best codices, Clarkianus or Parisinus A (p. 20): Rep. 2; Soph. 1 Phil. 1.
 - 196. τοῦν δυοῦν (p. 25): Crat. 1; Soph. 2 Polit. 1 Phil. 1 Legg. 2.
- 197. Dual of verb following plural of subject (p. 30): Euthyd. 2; Rep. 1; Polit. 1 Tim. 2 Legg. 2.
- 198. Dual of nouns in -61 with δυοΐν (p. 10): Prot. 1 Meno 2 Euthyd. 2 Gorg. 3; Rep. 1; Parm. 3; Tim. 5 Critias 1 Legg. 2.

Teichmuller believed, like

XVI. TEICHMÜLLER. A counterpart of Schöne's theory of perfection in style was Teichmüller's 124 (1879) stylistic test, according to which the dramatic dialogues are written later than the narrated dialogues, because

¹²⁴ Gustav Teichmüller, Die Reihenfolge der Platonischen Dialoge, Leipzig 1879 (xxii).

Plato in the Theaetetus (143 c) criticises the form of a narrated dialogue and introduces the dramatic form as more convenient. This easy way of classifying the dialogues according to a single peculiarity of style led Teichmuller to some conclusions as strange as those of Schöne, though less extravagant, because all the later dialogues are dramatic in form, and Plato seems actually to have given up the form of a narrated dialogue in his old age. But the dramatic form cannot be treated as a special invention, and to place with Teichmüller the Meno, Gorgias, and Cratylus after the Theaetetus is almost as rash as to recognise with Schöne the Timaeus as an earlier work than the Republic. Still Teichmüller was led by his argument to the correct conclusion that the Sophist, Politicus, Philebus are later than the Republic.

Schöne, one stylistic peculiarity to be decisive.

XVII. DITTENBERGER. A new method of stylistic Dittenresearch was proposed by Dittenberger 125 (1881), who, berger is
though knowing none of his predecessors, happily avoided the repetition of work already done, and directed his
attention to a subject not yet investigated, namely the
relative frequency of synonyms preferred or rejected in
Plato's different works. This effort brought into prominence some fresh peculiarities of later style:

Outenreduced
the study of prevalence
of one
synonym
over

199. καθάπερ occurs (according to Dittenberger, and for some dialogues according to later corrections of C. Ritter, p. 58): Lach. 1 Meno 1 Euthyd. 1 Gorg. 1 Crat. 2 Symp. 2; Rep. 6 Phaedr. 4 Theast. 2; Soph. 14 Polit. 34 Phil. 27 Tim. 18 Critias 5 Legg. 148. In all other dialogues & σπερ is used instead, and prevails very much over καθάπερ even in the Republic (212 times against 6 καθάπερ), in the Phaedrus (27 against 4 καθάπερ), and in the Theastetus (47 times against 2 καθάπερ).

The prevalence of one synonym over another is a while other peculiarity of style not less remarkable than the total words of absence or the appearance of some rare word, and Dittenthe same

berger introduced the study of prevalence of one synonym over another, and found that certain words are peculiar to one group of dialogues. while

123 Dittenberger, 'Sprachliche Kriterien für die Chronologie der platonischen Dialoge' in *Hermes*, vol. xvi. p. 321, Berlin 1881 (xxiii). The numbers quoted by Dittenberger have, in some cases, been corrected by C. Ritter, and are given here according to these corrections.

meaning are used in other works. berger had the great merit of extending the stylistic study to the relative frequency of synonyms; herein he developed independently an idea to which Campbell had alluded in a footnote (p. xxxii) when he quoted fourteen words of increased frequency in the later dialogues.

200. $\delta \sigma \pi \epsilon \rho$ is scarcer than $\kappa a \theta \delta \pi \epsilon \rho$ only in: Soph. 9/14, Polit. 16/34 Phil. 9/27 Tim. 10/18 Critias 2/5 Legg. 24/148. This scarcity of $\delta \sigma \pi \epsilon \rho$, a word which is very frequent in all other dialogues of Plato, is certainly one of the most characteristic peculiarities of Plato's later style, and coincides with the use of $\mu \epsilon \chi \rho \epsilon \pi \epsilon \rho$ noticed above (Nr. 53).

201. τάχα ἴσως: Soph. 2 Polit. 3 Phil. 3 Tim. 1 Legg. 11.

202. τί μήν; Rep. 35 Phaedr. 12 Theaet. 13; Parm. 6 Soph. 12 Polit. 20 Phil. 26 Legg. 48.

203. $\gamma\epsilon$ $\mu\dot{\eta}\nu$: Euthyd. 1 Symp. 1; Rep. 2 Phaedr. 1 Theaet. 1; Parm. 5 Soph. 6 Polit. 8 Phil. 7 Tim. 7 Critias 1 Legg. 25.

204. ἀλλά . . . $\mu \dot{\eta} \nu$: Symp. 2; Rep. 11 Phaedr. 1 Theaet. 1; Parm. 2 Soph. 2 Polit. 3 Phil. 2 Legg. 2.

205. καὶ μήν: Euthyph. 1 Charm. 2 Lach. 3 Prot. 2 Meno 5 Euthyd. 4 Gorg. 9 Crat. 9 Symp. 9 Phaedo 7 Rep. 44 Phaedr. 3 Theaet. 11 Parm. 25 Soph. 24 Polit. 24 Phil. 20 Tim. 1 Legg. 36.

This expression, though occurring in so many earlier dialogues, may nevertheless be counted among the peculiarities of later style, because it becomes very frequent only in the later dialogues, in which it supplants ἀλλὰ μήν, preferred to καὶ μήν in earlier writings of Plato.

206. ἀλλὰ μήν is scarcer than καὶ μήν only in: Lach. 2/3 Symp. 2/9; Theaet. 6/11; Soph. 10/24 Polit. 7/24 Phil. 7/20 Tim. 0/1 Legg. 8/36, while in all other dialogues ἀλλὰ μήν prevails over καὶ μήν (except Charm. 2 Meno 5 Crat. 9 Rep. 44 Parm. 25 Critias 0, in which both occur an equal number of times). This relative scarcity of ἀλλὰ μήν is the more striking inasmuch as the strong prevalence of the shorter καὶ μήν cannot be accidental.

He compared the changes in the style of Plato with those occurring in the

Besides these Dittenberger counted où $\delta i \mu \eta \nu$ which cannot be looked upon as peculiar to later style. He added to the strength of his conclusions by the observation that $\mu \eta \nu$ occurs with increased frequency also in the works of other authors who wrote about the time when Plato was over sixty. As $\tau \ell \mu \eta \nu$ in the meaning of an affirmative answer was not used in the Attic dialect, Dittenberger

inferred that Plato brought it from Sicily. But the style of occurrence of τί μήν in a work like the Lysis, which in other all other respects has the style of earlier dialogues, tells authors. against Dittenberger's inference. Even granting the Sicilian origin of the expression, there had been, for some years before the death of Socrates, sufficient intercourse between Sicily and Athens to familiarise Plato with 1/ μήν before he visited Sicily himself. His predilection for this formula, apparent in all later works, is a result of his increasing tendency to strong affirmation, because τί μήν; has the character of a great logical certainty, excluding every doubt: 'What else?' i.e. 'How could it be otherwise?'

Dittenberger's article was the first investigation of Ditten-Plato's style which attracted the general attention of German philologers, so much so that, of late, the merit of introducing statistics of style as a method for determining the chronology of Plato's dialogues has been frequently though attributed to him. It was a happy circumstance that based on Dittenberger, in his conclusions from a very small number quite inof observations, committed no greater error than the sufficient uncertain assumption that the Lysis came among the evidence. dialogues of the second group, between the Symposium But he correctly recognised the group and Phaedrus. of the latest six dialogues, and admitted that the Republic. Phaedrus, Theaetetus preceding these are later than the Symposium, Phaedo, Cratylus, and all Socratic dialogues.

inferences were

XVIII. JECHT. Since Dittenberger's publication the Jecht insubject of the statistics of Plato's vocabulary has been vestigated widely discussed by writers on the chronology of Plato. Blass 122 recognised the new method as leading to the surest results, while Zeller opposed it as too superficial. Dittenberger's pupil Jecht 126 (1881) chose as the subject for his doctor's dissertation the use of ηδη in Plato's

the use of ήδη in Plato's works, and found

126 Ricardus Jecht, De usu particulae hon in Platonis dialogis qui feruntur (Doctor's diss. Univ. Halle a. S.), Halis Saxonum 1881 (xxiv).

some differences between the various dialogues. But he did not draw the inferences resulting from his observations. dialogues. From his observations it results that the following uses prevail in later dialogues:

- 207. οὐκ ἥδη; ἥδη ...οὐκ οτ οὐκ... ἥδη; (p 12): Lach. 1 Meno 1 Gorg. 1; Rep. 3 Parm. 4; Soph. 2 Phil. 1 Legg. 1.
 - 208. ἐντεῦθεν ήδη (p. 50): Theaet. 1 Polit. 1 Tim. 1 Legg. 1.
- 209. ἤδη τὸ (or τὰ) μετὰ τοῦτο (or ταῦτα) to effect a transition (p. 50): Soph. 1 Phil. 1 Tim. 1.
- 210. ἤδη πα̂s (p. 8): Euthyd. 1; Rep. 4 Phaedr. 2; Soph. 1 Polit. 6 Phil. 2 Tim. 3 Legg. 6, including also passages, where ἤδη is separated by other words from πα̂s, ξύμπας, ξύναπας, πάμπας in their various cases, with or without preposition.
- 211. $\pi \hat{a}s$ $\mathring{\eta} \partial \eta$ (p. 8): Euthyd. 1 Crat. 1; Rep. 1; Parm. 1 Polit. 1 Phil. 1 Tim. 1 Legg. 2.
- 212. αὐτός ἤδη οτ ἤδη αὐτός (p. 9): Crat. 1 Rep. 3 Theaet. 1 Parm. 3 Phil. 1 Critias 1 Legg. 1, including also such passages where a δέ or γε separates ἤδη from αὐτός.
- 213. 1/81 with perfect designing an action terminated only in the present time (p. 21), with the meaning of 'by this time' (nunmehr): Rep. 2 Soph. 1 Phil. 1 Tim. 1 Legg. 1.
- 214. νῦν ἤδη (p. 44): Phaedo 1 Rep. 2 Phaedr. 1; Soph. 1 Phil. 2 Tim. 1 Legg. 2 (ἤδη νῦν does not occur).
- 215. νῦν.....ήδη separated by one or more words (p. 45): Charm. 1 Prot. 1 Meno 1; Rep. 1 Phaedr. 1 Theaet. 1; Soph. 2 Polit. 2 Phil. 1 Legg. 4.
- 216. τότ' ήδη meaning 'then already' (damals bereits, p. 46): Rep. 2 Phaedr. 1; Parm. 1 Soph. 1 Polit. 1 Critias 1 Legg. 3, while in some earlier passages as Lach. 181 p., Gorg. 527 p., Phaedo 87 E the meaning is 'not until then' ('dann erst' = tum demum), which meaning occurs also in Theaet. and Legg. This difference of meaning, similar to the difference appearing in the use of οὖτως ήδη (see below Nr. 220), is very characteristic. Impatient youth complains that things were 'not done until then' (Fr. enfin); resigned old age is fain to be content that they are 'done so soon,' or 'already' (Fr. dējā).
- 217. τότ' ἤδη in apodosi (p. 46): Lach. 2 Prot. 1; Rep. 2 Phaedr. 1 Theaet. 1; Tim. 1 Critias 1 Legg. 1.
- 218. #8n between a participle and an adjective belonging to it (p. 4): Rep. 1 Theaet. 1 Legg. 2.
 - 219. μετὰ τοῦτο ήδη (p. 9): Rep. 2 Tim. 1 Legg. 3.
- 220. οὅτως ἤδη (p. 9): Crat. 1 Symp. 2 Phaedo 2; Rep. 1; Parm. 1 Polit. 1 Tim. 1, including one instance of οὅτως ἀν ἤδη in Parm. 145 c. It is important to notice that in the passages of Crat. Symp. Phaedo the meaning is 'then' or 'not until then' ('dann erst'), while beginning with the Republic the four later passages are best translated by 'thus already' (so bereits), which is parallel to the use of τότ' ἤδη.

221. ἤδη καὶ (p. 13): Charm. 2 Prot. 2 Meno 1 Crat. 1 Symp. 1 Phaedo 1; Rep. 3; Parm. 1 Soph. 2 Polit. 1 Phil. 1 Critias 1 Legg. 3. 222. ἤδη with plusquam-perfectum (p. 21): Euthyph. 1 Prot. 1 Crat. 1; Rep. 1; Polit. 2 Tim. 2 Legg. 1.

XIX.-XX. Frederking and Hoefer. Dittenberger's Frederarticle aroused opposition. In order to show that statistics of particles are at times inconsistent, Frederking of Dorpat undertook (1882) to count how many times Plato used TE and some other words. 127 He counted roughly and failed to distinguish the various uses of $\tau \epsilon$. Hence his investigation loses all importance, all the more that the counting has been better done by Hoefer¹²⁸ (1882), who also studied the use of $\tau \varepsilon$ and some other particles, adding to the stock of peculiarities distinctive of Plato's later style. Hoefer. as his dissertation shows, knew none of his predecessors save Dittenberger, though he occasionally quotes Campbell's emendations of the Sophist and Politicus, probably from the original edition. Obviously he had not read Campbell's Introduction, yet he perceived the importance of stylistic studies for Platonic chronology. Moreover, he recognised that his observations were too few to allow of definite conclusions as to the order of the dialogues, wherein he has shown greater caution than some other His careful and complete enumerations yield to the authors. the following data:

223. τοιγαρούν (p. 40): Soph. 3 Legg. 2, while in some earlier dialogues τοιγάρτοι is used instead, occurring Lach. 1 Euthyd. 1 Gorg. 2 Symp. 1 Phaedo 1; Rep. 3 Theaet. 1, and never later. Hoefer points out that Thucydides always used τοιγάρτοι and never τοιγαροῦν, while in Aristotle only the second form is used. Isocrates, Xenophon, and Demosthenes use both.

224. καὶ μὴν οὐδέ (p. 40): Rep. 2; Parm. 1 Soph. 1 Polit. 1 Legg. 1.

225. $\gamma d\rho \dots \delta \dot{\eta}$ separated by a verb (p. 25): Parm. 1 Legg. 2.

226. μέν...τε (p. 17): Rep. 1 Phaedr. 1; Tim. 1 Legg. 2.

227. To used after a single word (not a sentence), adding a third object after two enumerated (p. 9): Rep. 3 Theaet. 3; Polit. 1 Tim. 9.

king's objections overthrown by a more inquiry of Hoefer. who independently, and without knowing Frederking, counted the same particles, and found some uses of $\tau \epsilon$ and τοι limited same dialogues in which καθάπερ prevails

ὥσπ€ρ.

¹²⁷ A. Frederking, 'Sprachliche Kriterien für die Chronologie der platonischen Dialoge,' in Jahrbucher für classische Philologie, 28er Jahrgang, p. 534, 1882 (xxv).

¹⁸⁸ Hermann Hoefer, De particulis platonicis capita selecta (Doctor's diss. Univers. Bonn), Bonn 1882 (xxvi).

228. τε...τε (p. 11): Charm. 1 Gorg. 1 Crat. 1 Symp. 2 Phaedo 2; Rep. 35 Phaedr. 12 Theaet. 5; Parm. 1 Soph. 3 Polit. 3 Phil. 2 Trm. 11 Critias 1 Legg. 50.

229. $\tau\epsilon \dots \tau\epsilon$ connecting single words, not phrases (p. 11): Rep. 5 Phaedr. 5; Polit. 1 Tim. 3 Critias 1 Legg. 16. Here we see how by distinguishing the various uses of a word the affinity of dialogues belonging to the later time is made evident, even if at first sight a word's use is not limited to them. This becomes still more instructive by the following distinction:

230. $\tau\epsilon \dots \tau\epsilon$ connecting two words not separated by any other part of the phrase, as in Tim. 87 E: $\tau \dot{\sigma} \tau' \dot{\tau} \dot{\tau} \tau \dot{\sigma} \tau' \dot{\epsilon} \sigma \tau a$ or Critias 121 B: $\pi a \gamma \kappa a \lambda o \dot{\tau} \dot{\epsilon} \epsilon \mu a \kappa \dot{a} \rho \iota o \dot{\epsilon} \dot{\epsilon} \epsilon$ (p. 12): Tim. 1 Critias 1 Legg. 1. In this way sometimes an expression which at first sight appears not to be peculiar to a group of dialogues, may by subsequent distinctions be used to characterise several groups. According to Frederking $\tau \epsilon \dots \tau \epsilon$ was used indistinguishably in early and late dialogues, while according to the above distinctions established by Hoefer one particular use is limited to the Republic and dialogues later than the Republic, while another particular use exists only in the three latest dialogues, Timaeus, Critias, Laws.

231. The simple $\tau \epsilon$, whose frequent occurrence according to Frederking gave no chronological indications, is also shown by Hoefer to furnish some chronological distinctions. It occurs (pp. 5-6): Apol. 1 Crito 1 Charm. 2 Prot. 1 Gorg. 1 Symp. 1 Phaedo 1 Rep. 25 Phaedr. 23 Theaet. 6; Parm. 2 Soph. 3 Polit. 6 Phil. 1 Tim. 198 Critias 27 Legg. 155. It results that it is used more than twice only in Rep. Phaedr. Theaet. Soph. Polit. Tim. Critias Legg., and more than twice in every five pages only in Tim. Critias Legg. This word appears to have two epochs of greatest frequency, the proportion being in Rep. 13 times to 100 pp. (ed. Didot), rising in Phaedr. to 54 times in 100 pp., rapidly declining in the later dialogues until in Phil. it occurred only once (corresponding to a proportion of 2 in 100 pp.), to rise again to a maximum of 878 times in 100 pp. in Tim., 245 times in 100 pp. in Critias, and to decline once more in the Laws to 65 times in 100 pp. There is no reason whatever to doubt that Plato might have twice increased and then diminished the use of a word. To being frequent in all books of the Laws, it tells against C. Ritter's opinion that the Philebus was written at the same time as the earlier books of the Laws. Although no positive chronological inferences can be drawn from a single stylistic peculiarity, we may doubt whether Plato avoided almost completely in one work the use of a word frequently used by him at the same time in another work, especially as the use of this word is entirely independent of the contents. But such observations are never decisive so long as they remain isolated. If some other equally important stylistic differences between Phil. and Legg. are found,

simple $\tau \epsilon$, which at first sight occurs indifferently in early and late dialogues, may be used for chronological conclusions if some distinctions are made between the different nses.

Even the

then only the presently observed difference will acquire its full value.

232. $\tau\epsilon$ connecting phrases, placed immediately after the verb (p. 7): Crito 1 Rep. 3 Phaedr. 1; Parm. 1 Phil. 1 Tim. 8 Critias 1 Legg. 5.

233. $\tau\epsilon$ adding a third phrase to two preceding phrases, which are united by $\kappa \alpha i, \tau\epsilon, \tau\epsilon \ldots \kappa \omega i, \mu \epsilon \nu \ldots \tau\epsilon$, or $\mu \epsilon \nu \ldots \delta \epsilon$ (p. 7): Phaedr. 3 Tim. 5 Critias 1 Legg. 9. Hoefer (p. 7) quotes also two other cases of $\tau\epsilon$ peculiar to Timaeus and Laws only, too special for inclusion in our list, but very instructive as samples of acute distinction in stylistic statistics, showing the close relation between these two dialogues.

234. τε used ἀνακολούθως (p. 13): Gorg. 1 Phaedo 2 Rep. 4 Phaedr. 2 Theaet. 1 Tim. 1.

285. τε...καί...δέ (p. 15): Critias 1 (118 D) Legg. 1 (708 A).

Other particles investigated by Hoefer, as $\gamma \acute{a}\rho$, $\tau o\iota$, $\pi o\upsilon$, $\delta \acute{\eta}$, $\mu \acute{e}\nu \tau o\iota$, and their various combinations are more characteristic of the earlier than of the later style.

XXI. Peipers. Following closely upon these statistics of the use of particles appeared the first special work concerning an important part of Plato's terminology, the use of the words ou and ou oía. This philological inquiry is contained in Peipers' 94 Platonic ontology (1883), and exceeds in volume all preceding treatises on Plato's style. Of his predecessors, Peipers only knew Dittenberger, though he quotes Campbell's commentary to the Sophist, which he used without examining the Introduction. He observed some differences in the use of the terms investigated, but did not build on such stylistic tests any chronological conclusions, while he correctly inferred the very late date of Parm. Soph. Polit. Phil. from their philosophical contents. From his exhaustive enumerations it results that many expressions may be looked upon as peculiarities of later style.

Peipers found some peculiarities of Plato's later style, though style was not the object of his study.

236. ővrws őv, in the meaning of metaphysical being, or oὐσία He classiővrws, in the same meaning, generally ővrws as a metaphysical fied the term, are found by Peipers (pp. 30-31, 514, 540) in: Rep. 3 Phaedr. 3; various Soph. 8 Polit. 7 Phil. 2 Tim. 3 Legg. 3.

237. οὐσία meaning 'aliquid totum et absolutum, rebus nascentibus et incrementa capientibus oppositum' (pp. 88–108, 515), which is a mixed substance between ideal and material being (of πέρας and ἄπειρον, ἀμέριστον and μεριστόν, ταὐτόν and θάτερον). This

fied the various meanings of the words $\delta \nu$ and $o b \sigma l a$,

and found certain meanings of these terms very frequent in the latest works. notion is, according to Peipers, very near to the Aristotelian conception of substance, and is found only in Phil. 8 Tim. 2 Legg. 2.

238. $oi\sigma ia$ = complexus omnium rerum, quas entium nomine appellare homines solent (pp. 28-29 and 512): Rep. 1 (486 A) Soph. 1 (261 E) Tim. 2 (35 A, 37 A).

239. δ ἔστι (pp. 38-41 and 541): Crat. 2 Symp. 1 Phaedo 7; Rep. 8 Phaedr. 1 (247 ε); Parm. 9 Tim. 1 (39 ε).

240. ὄντως καὶ ἀληθῶς (p. 124): Rep. 1 Soph. 1 Phil. 1.

241. ὄντως meaning ἀληθῶς (pp. 125 and 513): Crat. 1 Rep. 3 Phaedr. 2 Theaet. 1; Soph. 6 Polit. 4 Phil. 11 Tim. 6 Legg. 49.

242. ὄν or οὐσία = res vera, opposita fictitiæ (pp. 182–152 and 518): Euthyd. 1 (290 c) Gorg. 2 (472 B, 495 A) Symp. 1 (202 A) Phaedo 7; Rep. 9 Theaet. 7; Soph. 13 Polit. 1 Phil. 3 Legg. 25.

243. $\tau \delta \tilde{\nu} = \mathrm{id}$ quod tam a loci quam a temporis conditionibus liberum, neque nascitur, neque interit, sed immutabile et constans eodem modo semper se habet, objectum philosophandi (pp. 50 and 514): Crat. 1 (424 a) Rep. 22 Phaedr. 4 Theaet. 1 Soph. 36 Phil. 2 Tim. 2 Legg. 2.

244. τὰ ὅντα in the same meaning as above (pp. 63-66): Crat. 2 Phaedo 2; Rep. 5 Phaedr. 3 Theaet. 1; Parm. 2 Soph. 5 Phil. 2 Tim. 4.

245. οὐσία = substance as object of knowledge (pp. 67 and 515): Crat. 9; Rep. 11 Phaedr. 4 Theaet. 8; Parm. 3 Soph. 6 Polit. 3 Tim. 1 Legg. 5. Some isolated passages quoted by Peipers from other dialogues, as Euthyph. 11 A Charm. 168 c D Prot. 349 B Meno 72 B, seem not to belong here, as they offer a different meaning of οὐσία, as 'nature,' 'object,' 'property,' 'definition.'

246. $\tau \delta \delta \nu = \text{what exists}$, opposed to $\mu \eta \delta \delta \nu$ (pp. 11–16 and 512): Euthyd. 3 Crat. 2 Symp. 1 (205 B); Rep. 11 Theaet. 11; Soph. 31 Polit. 1 Phil. 1 Tim. 1 Legg. 5.

247. $o\dot{v}\sigma ia$ = what exists (pp. 17 and 539): Rep. 2 Theaet. 5; Soph. 7 Polit. 1 Tim. 1.

248. τὰ ὅντα = τὰ πράγματα (pp. 19-28, 512, 540): Charm. 3 Meno 3 Euthyd. 6 Gorg. 5 Crat. 25 Symp. 2 Phaedo 9; Rep. 4 Phaedr. 6 Theaet. 8; Parm. 5 Soph. 4 Polit. 3 Phil. 6 Tim. 3 Legg. 6.

249. $\tau \delta$ $\delta \nu = \text{veritas}$ cognitione aut oratione expressa (pp. 222–280): Euthyd. 4 Gorg. 1 Crat. 2; Rep. 4 Phaedr. 3 Theaet. 5; Parm. 1 Soph. 4.

Peipers'
distinctions
obscure;
his work
should be
repeated
from the
stand-

Peipers' distinctions are sometimes obscure, and the numerous quotations collected in his work are not conveniently arranged. The Laws are treated apart in a few pages towards the end of the work (pp. 512-516). Peipers did not count the passages quoted, nor did he distinguish the number of occurrences in a single passage. His work remains a valuable collection of texts, which calls for a complete digest by some clearer expositor.

His conclusions on the order of dialogues do not precisely point of correspond to considerations of style. Against the purely statistical evidence, Peipers separates the Phaedrus from the Republic by the Banquet, and puts the Theaetetus later than the Timaeus, following alleged differences of ontological doctrines not easily definable. But he had the great merit of recognising the very late date of Soph. Polit. Phil., as written after the Republic.

investigation.

XXII. P. Weber. After so many investigations on P. Weber Plato's vocabulary, P. Weber 129 (1884) returned to the old problem of the construction of phrases in Plato. But he seems to have wholly ignored the relation between the style and the chronology of Plato's writings, and he neither distinguishes the single dialogues nor enumerates the passages, except when dealing with some very rare stylistic the chropeculiarity. Under these circumstances Weber's dissertation is chiefly of interest as contributing to the stylistic definition of Plato's works as a whole, for comparison with other authors, but containing very few hints for distinctions between early and later style:

ignored the relation between the style and nology, and gave only in a few instances complete enumerations of passages, by which omission he deprived us of many useful indications.

250. Tva with conjunct. 'nach Nebenzeiten,' and referring to a design lasting up to the present time (p. 11): Crito 1 Prot. 2 Meno 1 Crat. 1 Symp. 2; Rep. 1 Theaet. 3 Parm. 1; Tim. 3 Legg. 3.

251. ὅπως with conjunct. 'nach Hauptzeiten, in vollständigen Finalsatzen ' (p. 13): Symp. 1 Legg. 9.

252. ὅπως with optativ. praes. 'nach Nebenzeiten, in vollstandigen Finalsätzen' (p. 14): Prot. 1 Phaedr. 1 Tim. 5.

253. ὅπως ἄν with conjunct. 'in vollständigen und unvollständigen Finalsätzen' (pp. 14, 21): Lach. 1 Prot. 1 Gorg. 6 Symp. 1 Phaedo 1; Rep. 9 Phaedr. 1; Tim. 1 Legg. 22.

Weber also gives the number of all occurrences of final sentences with $\mu\dot{\eta}$, $\tilde{l}\nu a$, $\tilde{o}\pi\omega s$, $\dot{\omega} s$, with various tenses and moods, but without distinction of single dialogues, so that his work must be repeated if it is to afford chronological distinctions.

A marked contrast to both the Droste XXIII. DROSTE.

129 Dr. Philipp Weber, Der Absichtssatz bei Plato, Würzburg 1884. A Doctor's dissertation of the university of Würzburg. This is the xxviiith tinguished publication on this subject, Peipers' being the xxviith.

classes of according to the mode of their formation, so effecting a progress in the method of stylistic investigations.

preceding writers as to the clearness of exposition rare words and excellent method of investigation is presented in the dissertation of P. Droste 130 of Düsseldorf (1886), who undertook to represent Plato's use of adjectives terminating in ειδής and ώδης. Since Campbell nobody had examined the formation of new rare words by Plato, and Droste knew none of his predecessors except Dittenberger, yet he unconsciously perfected the Scotch investigator's method, distinguishing classes of new rare words according to the mode of their formation, and not only according to their meaning or origin. endows Droste with a merit scarcely dreamed of by him, and manifests at the same time how progress in scientific method may be realised apart from wide knowledge. Droste dissects Plato's art of word-building under one of its aspects, dealing with words mostly very rare and invented by Plato for the expression of his thoughts against the general usage of his times: of seventy given adjectives, forty-six are never used before (13 in ειδήs and 33 in ώδηs), and thirty-seven are later accepted by Aristotle (7 in ειδήs and 30 in ώδηs). Droste minutely compared Plato's use of such adjectives with their employment by earlier and later authors. Before Plato these words were rare, and since Plato they became very common, as is easily seen from the following table:

		used by poets:									historians :			
Number of different	Homer	Hestod	Rechylus	Sophocles	Buripides	Aristoph.	Pindar	Theognis	Herodotus	Thucydid.	Xenophon	Plato	Aristotle	Later suthors
adjj. in etôńs	7	4	8	1	5	1	1	2	7	8	6	22	48	480
adjj. in ώδης except those derived from δζω	4	1	2	10	23	10	3	0	7	11	17	48	152	900

This table is re-arranged according to the table given by Droste (p. 39). It follows that Assohylus, Sophocles, Euripides, Aristophanes, Pindar, Herodotus, and Thuoydides taken all together had used a smaller number of adji. in «18/15 than Plato alone, while after Plato the use of both kinds of adji. rapidly increased.

¹²⁰ P. Droste, De adjectivorum in sichs et in écns desinentium apud Platonem usu (Doctor's diss. Univ. Marburg), Marpurgi, without date, published 1886 according to Hinrich's Catalogue (xxix).

This interesting comparison proves how well chosen was the use of such adjectives, as constituting an important peculiarity of Plato's style. The relative occurrence in various dialogues is seen from the following table, constructed from the materials given by Droste, pp. 18–19, 37–41, rearranged in a more systematic manner than in his tables:

In	diffe adjecterm ing	ber of erent tives inat- ; in	occur of all tives natin		OBSERVATIONS.—All quoted adjectives are used only once by Plato, unless the number of occurrences in each dialogue is shown. [13]—† [18]—[45] πυρώδης (Aristoph.) Α. (11)—(22) * πυροειδής—[1]—† [8]—† [9]—[11] —[44]—† [16]—+ [19]—† [23]—+ [41]—+ [44]

In no other dialogue adjectives in ειδής or ώδης are found, except Epinomis (6) Alc. I. [1] [14] and Alc. II. [2], in each of which occur only 1-2 adjectives used by Plato in authentic dialogues, and in Alc. I. πρεπώδης, taken from Aristophanes.

New- The most interesting general result of Droste's ininvented vestigation is that not one of the spurious dialogues adjectives contains new-invented adjectives in ειδήs or ώδηs, and

that even those introduced by Plato are used only in four in sides isolated instances in probably spurious dialogues, as Alcibiades I. and II. and Epinomis. This shows the originality of vocabulary to be an inimitable peculiarity of Plato's style, and further increases the improbability of anybody but Plato having written such original works as the Parmenides, Sophist, and Politicus. In these dialectical are fredialogues adjj. in ειδής and ώδης are scarce, while many new-formed adjectives in union abound; Droste counted 224 such adjectives in the Sophist, and 320 in the Politicus, while only 12 occur in the Phaedo. Droste's dissertation offers important additions to our list of peculiarities of later style:

and ώδης do not occur in spurious dialogues, while they quent in authentic works.

254. New-invented adjj. in ειδής occur (p. 18): Gorg. 1 Crat. 2 Symp. 2 Phaedo 21; Rep. 24 Theaet. 1; Polit. 1 Phil. 1 Tim. 8 Legg. 1. (These numbers are not given by Droste; they result from the above table.)

255. New-invented adjj. in ώδης (pp. 38 and 31-35): Charm. 1 Crat. 10 Phaedo 4; Rep. 14 Theaet. 4; Parm. 1 Polit. 1 Phil. 1 Tim. 9 Critias 1 Legg. 11.

256. πολυειδής: Phaedo 1 Rep. 3 Phaedr. 3; Soph. 1, A (Table (5), Droste, p. 11).

257. +μονοειδής: Symp. 2 Phaedo 3; Rep. 1 Theaet. 1; Tim. 1, A (Table (4), Droste, p. 11).

In these adjectives the primitive meaning of the Plato first termination is preserved, though here, too, sloss often means species and not form. This use of adji. in ειδής to designate a species corresponds to a logical tendency, as Droste well observed, and was never attempted before Plato introduced it into the Greek language 'ex necessitate quadam et ex philosophandi angustiis' (p. 19).

258. Adjj. in ειδής designating a species (p. 14): Phaedo ((6) (8) (9) (10)) 8 Rep. ((10) (11) (12) (13)) 23 Polit. ((10)) 1 Phil. ((15)) 1 Tim. ((10)(11)(18)(19)(20)(21)) 7 Legg. ((22)) 1.

Among these adjectives some are specially characteristic:

259. +σωματοειδής (p. 15): Phaedo δ Rep. 1 Polit. 1 Tim. 2, A.

introduced the use of such adjectives to designate a species, and he used them frequently also in other meanings well defined by Droste. 260. θυμοτιδής (p. 16), in the same meaning as in Xenophon: Rep. 8 Legg. 2 (see table (11)).

261. †θυμοειδής (p. 15), as philosophical term, used also

later by A.: Rep. 19 Tim. 1.

262. Adjectives in ειδής or ώδης designating form or colour (including ἀειδής) (pp. 10, 18–14, 31): Crito ((1)) 1 Gorg. ((2)) 1 Crat. ((2)(3)) 2 Phaedo ((2)(7)) 13 Rep. ((1)(6)) 3 Phaedr. ((6)) 1 Soph. ((14)) 1 Tim. ((16)(17)[89]) 7. (θεοειδής is used in this meaning only Rep. 501 B Phaedr. 251 A, while in Phaedo 95 c and Epinomis it designates a species.)

More frequent are the adjectives in $\omega\delta\eta s$, which are classified by Droste according to their meaning. Those derived from $\delta\zeta\omega$ form one class, containing only $\epsilon\dot{\nu}\dot{\omega}\delta\eta s$ and $\dot{\alpha}\dot{\omega}\delta\eta s$, of which the second is used only once ($Tim.\ 50\ E$).

263. εὐώδης: Symp. 1 Phaedr. 1 Tim. 1 Critias 1, A (Droste, p. 81, table [18]).

264. Adjectives in ώδης designating similarity (pp. 31-32): Crat. ([10] [11]) 2 Phaedo ([16]) 1 Rep. ([11] [14] [22] [26-30]) 9 Phaedr. ([14]) 1 Theaet. ([31] [33]) 2 Polit. ([11]) 1 Phil. ([36]) 1 Tim. ([40] [41]) 2 Critias ([45]) 1 Legg. ([11] [16] [41]) 5. Among these the following are characteristic:

265. θηριώδης: Crat. 1 Rep. 1 Polit. 1 Tim. 1 Legg. 3.—A. (in Tim. 91 E it designates a species, while in Legg. 909 A it means 'like brutes,' and in other passages, as Rep. 571 c, Legg. 906 B, it has a similar meaning).

266. ⁺δημώδης: Phaedo 1 Legg. 1.

267. ἀνδραποδώδης (p. 32): Symp. 1 Phaedo 1 Rep. 1 Phaedr. 1 Legg. 1 (in Symp. 215 E and Legg. 880 A it designates a species. Droste omitted Phaedo 69 B, where it means similarity).

268. ⁺οἰστρώδης : Tim. 1 Legg. 1.

269. Adjectives in ώδης designating a species (pp. 32-33): Crito ([1]) 1 Charm. ([1] [2]) 4 Lach. ([1]) 1 Crat. ([5-8] [12]) 5 Symp. ([1] [14]) 2 Phaedo ([17] [18]) 3 Rep. ([1] [24] 6 Theaet. ([1] [2]) 2 Polit. ([1] [85]) 4 Tim. ([11] [18] [42] [48]) 5 Critias ([18]) 1 Legg. ([14] [47]) 2.

270. *νοσώδης, designating a species: Crito 1 Charm 3 Lach. 1 Symp. 1 Rep. 5 Theaet. 1 Polit. 3, A. This meaning, as for instance Rep. 488 E, is different from the following:

271. νοσώδης: meaning sickly, diseased, opposed to ὑγιεινός: Symp. 1 Rep. 4 Legg. 3, A. (Droste omitted Rep. 556 E, and quotes therefore only three passages in Rep.)

272. γεώδηs: Phaedo 2 Tim. 3 Critias 1, A (in Tim. 66 B it does not designate a species, but local connection).

273. σκοτώδης: Crat. 1 Phaedo 1 Rep. 2 Legg. 1, A (of these only in Crat. 412 B is a species designated, while the other passages use that word in the meaning called by Droste 'of local connection,' as 'full of darkness').

274. Adjectives in ώδης indicating local connection (p. 84) meaning 'full of . . .': Meno ([3]) 1 Euthyd. ([4]) 1 Crat. ([8]) 1 Symp. ([1]) 1 Phaedo ([8] [15]) 2 Rep. ([1] [8] [25]) 7 Theaet. ([32]) 1 Parm. ([34]) 1 Tim. ([18] [38] [39] [48]) 5 Legg. ([1] [8] [19] [46]) 6. This use is distinguished by Droste from the preceding, and also from the following, as may be seen by comparing the meaning of θρηνώδης in Legg. 792 B (274) and Rep. 398 E (275), of χολώδης in Tim. 86 E (274) and Tim. 71 B, 83 B (262).

275. Adjectives in ώδης denoting causal relations (p. 84): Crat. [9] 5 Rep. [19, 20, 21, 23] 6 Tim. [44] (42 D) 1 Legg. [9] (650 A, 690 E) [23] (854 B, 881 E) [44] (671 A) 5.

Among these the following occur in more than one dialogue:

276. ἀλιτηριώδης (p. 34): Rep. 1 Legg. 2.

277. ζημιώδης (p. 34): Crat. 5 Legg. 2 (Droste omitted Crat. 418 A, B).

278. θορυβώδης (p. 35): Tim. 1 Legg. 1.

Droste's dissertation is a model of stylistic investiga- Droste's tion made for the purposes of Platonic chronology. see that in the above enumeration the Phaedo very fre-tion a quently occurs together with later works, and Droste inferred that the *Phaedo* was written after the *Phaedrus*. thoughone But this cannot be decided without considering many of his conother peculiarities of vocabulary and style, besides the clusions is adjectives investigated by Droste; it will then appear erroneous. that the Phaedrus is much nearer to the Republic as The well as to the latest six dialogues than the Phaedo, Phaedo though in some respects the Phaedo may approach not later the style of the Republic more nearly than does the than the Phaedrus. The natural explanation is that the Phaedo immediately preceded the Republic, while the Phaedrus believed. followed it.

XXIV. F. KUGLER. A dissertation published at the Kugler same time as Droste's, by F. Kugler, 131 of Basel, on Tol found and its compounds, shows also certain analogies between many uses

We dissertamodel of method. Phaedrus, as Droste

became

SCATCET.

279. μέντοι used to oppose to each other two parts of the same phrase (p. 26): μProt. 4 Meno 1 Euthyd. 1 Gorg. 2 Symp. 1 Phaedo 2; Rep. 4, Phaedr. 2 Theaet. 1; Parm. 1 Polit. 1 Phil. 1, including also some cases of opposition by means of οὐ μέντοι, and μὴ μέντοι.

280. γè . . . μέντοι (p. 27): Crito 1 Euthyd. 1 Gorg. 2; Rep. 3 Phaedr. 1 Theaet. 4; Soph. 1 Phil. 1 Legg. 1.

281. 701 between article and substantive (p. 7): Symp. 1 Theaet. 1 Soph. 1 Phil. 1.

282. 701 after the verb (p. 7): Gorg. 1 Phaedo 1; Theaet. 1 Soph. 1.

283. καίτοι = et vero (pp. 17-18) : Gorg. 2; Rep. 1 Theaet. 1; Phil. 1 Legg. 3.

284. τοίνυν in the conclusion of a syllogism or of a similar argument (p 32): Crito 1 (44 A) Charm. 2 (162 B syll.) Meno 2 Gorg. 4 Crat. 1 (482 D syll.) Phaedo 3 (62 c syll.) Rep. 18 (368 E, 608 A syll.) Phaedr. 4 Theaet. 1 (192 E syll.) Soph. 8 Polit. 4 Phil. 10 (including three syll. 38 E, 41 D, 56 c) Legg. 14.

This increasing use of a word which was afterwards so much used by Aristotle in logical conclusions is very characteristic of the progress made by Plato in his logical terminology.

285. τοίνυν ἔτι in transitions (p. 84): Charm. 1 Phaedo 1; Soph. 3 Polit. 2 Phil. 2 (the form ἔτι τοίνυν is much more often used).

286. ἔτι δή τοίνυν: Phil. 1 (52 A) Legg. 1 (817 E).

287. καὶ τοίνυν (p. 84): Soph. 2 Polit. 1 Legg. 3 (while καὶ ... τοίνυν was used earlier, in Charm. 1 Gorg. 1 Rep. 4 Theaet. 1 and also in Phil. 1).

288. πρώτον μὲν τοίνυν (p. 85): Crat. 1 (426 c) Phaedo 1 (90 D) Rep. 1 Polit. 1 Phil. 2 Legg. 3.

289. τοίνυν begins a new argument (p. 35): Apol. 1 Euthyph. 1 Crito 1 Charm. 3 Gorg. 1 Crat. 9 Symp. 1 Phaedo 6; Rep. 13 Phaedr. 6 Theaet. 6; Parm. 1 Soph. 10 Polit. 13 Phil. 9 Legg. 21.

290. rolvvv in transitions (p. 85): Crito 1 Crat. 9 Symp. 1 Phaedo 1; Rep. 14 Theaet. 4; Soph. 4 Polit. 1 Phil. 4 Legg. 9.

291. δή τοίνυν (p. 86): Rep. 1 Phil. 1 Legg. 5.

292. τοίνυν δή: Gorg. 1 Legg. 1.

293. #δη τοίνυν (p. 86): Meno 1 Crat. 1; Polit. 1 Phil. 1 Legg. 1. 294. μὴ τοίνυν (p. 86): Crito 1 Charm. 1 Lach. 1 Meno 1 Symp. 1 Phaedo 1; Rep. 4 Theaet. 3; Soph. 7 Polit. 1 Phil. 2 Legg. 6.

295. οὐ-τοίνυν (p. 36): Soph. 1 Legg. 1.

296. τοίνυν, instead of being the second word of the phrase as usual, is placed in the third place or further (p. 36): Apol. 1 Euthyph. 1 Charm. 1 Meno 1 Euthyd. 1 Crat. 1 Phaedo 1; Rep. 10 Phaedr. 1 Theaet. 1; Soph. 5 Polit. 7 Phil. 3 Legg. 8.

297. ὡς δή τοι (p. 12), beginning an evident conclusion: Rep. 1 Phaedr. 1 Tim. 1.

298. καίτοι... δέ οτ ὅμως δέ (p. 19): Apol. 1 Lach. 1 Meno 1 Euthyd. 1 Gorg. 1; Rep. 3 Phaedr. 2; Parm. 1 Phil. 1 Critias 1 Legg. 3.

299. ἀληθῆ μέντοι (in affirmative answers, p. 23): Lach. 1 Rep. 1 Soph. 1 Legg. 5.

300. #rou . . . # (p. 14): Prot. 2 Meno 2 Gorg. 2 Crat. 5 Phaedo 2; Rep. 2 Phaedr. 1 Theaet. 3; Parm. 3 Phil. 2 Legg. 2.

301. καίτοι . . . ἀλλά (p. 19): Lach. 3 Gorg. 1 Crat. 1 Phaedo 1; Parm. 1; Polit. 1 Legg. 2.

302. Simple μῶν (p. 40): Prot. 1 Meno 2 Euthyd. 2; Rep. 1 Theaet. 1; Soph. 2 Polit. 2 Phil. 1 Legg. 5.

303. $\mu\hat{\omega}\nu$ $o\hat{v}\nu$ (p. 40): Soph. 2 Polit. 2 Phil. 4 Legg. 10 (including one $o\hat{v}\nu$ $\mu\hat{\omega}\nu$).

304. μῶν οὐ (p. 40) : Soph. 3 Polit. 2 Phil. 4 Legg. 10.

305. $\mu \hat{\omega} \nu \ \mu \hat{\eta}$ (p. 40): Phaedo 1 Rep. 2 Soph. 1 Phil. 1.

306. τοίνυν more than four times oftener than μέντοι (p. 45): Soph. 55/13 Polit. 46/7 Phil. 52/8 Legg. 120/17 while in all other works τοίνυν is much scarcer, occurring in no other dialogue twice as often as μέντοι, the proportion to μέντοι being in Rep. Phaedr. Theaet. 188, in Euthyphr. Apol. Crito Charm. Lach. Prot. 88, in Meno Euthyd. Gorg. Crat. Symp. Phaedo 128, in Parm. 3, in Tim. Critias 8.

It would be unjustifiable to draw any inference from the absence of both particles in Tim. Critias, or from the scarcity of τοίνυν in Parm. The only conclusion allowed is, that Soph. Polit. Phil. Legg. have the peculiarity in common of an exceptional predominance of τοίνυν over μέντοι. From a single peculiarity no chronological conclusions can be drawn, but this peculiarity, joined to many others, offers a measure of affinity between the dialogues in question.

307. μέντοι occurs less than once in two pages only in (p. 45): Crito 2 Prot. 19 Meno 6 Gorg. 23 Symp. 18; Phaedr. 16 Parm. 13; Soph. 13 Polit. 7 Phil. 3 Tim. 0 Critias 0 Legg. 17 being less than once in five pages only in Polit. Phil. Tim. Critias Legg. This acquires a special importance if we consider that μέντοι went

These observations are valuable, but Kugler attributed too great importance to the scarcity of rolyuv in the Parmenides.

out of frequent use in Plato's time as Kugler has shown by comparing other authors, from Xenophon, in whose writings μέντοι greatly prevails over τοίνυν, down to Demosthenes, who uses μέντοι very rarely.

308. rolvuv is very frequent, occurring once in two pages or oftener in: Crito 5 Charm. 20 Lach. 10 Meno 13 Crat. 32; Rep. 133 Theaet. 39; Soph. 55 Polit. 46 Phil. 52 Legg. 120.

From these and many other uses of τoi Kugler inferred quite correctly that the *Sophist*, *Politicus*, *Philebus* belong to the same period as *Timaeus*, *Critias*, *Laws*.

Schanz independently confirmed Campbell's conclusions. XXV. M. SCHANZ. The same conclusion is also reached by Martin Schanz,¹³² the editor of Plato, who simultaneously with the dissertations of Kugler and Droste published his article on the development of Plato's style. Though he quotes Campbell's emendations to the Sophist in his critical edition of the same dialogue, Schanz seems not to have read Campbell's Introduction. Directing his attention to expressions designating truth and being, he found:

309. ὅντως: Euthyd. 1 Crat. 1; Rep. 9 Phaedr. 6 Theaet. 1; Soph. 21 Polit. 11 Phil. 15 Tim. 8 Legg. 50, while in earlier works τῷ ὅντι is used instead, which is entirely absent from Polit. Phil. Tim. Critias Legg., and occurs but once in Soph.

310. $\dot{a}\lambda\eta\theta\epsilon\dot{a}$ (used instead of $\tau\hat{\eta}$ $\dot{a}\lambda\eta\theta\epsilon\dot{a}$) only in Prot. 3 Phil. 1 Tim. 1 Legg. 3.

311. $\partial \lambda \eta \theta \hat{\omega} s$ (instead of $\hat{\omega} s$ $\partial \lambda \eta \theta \hat{\omega} s$): Apol. 1 Euthyph. 1 Prot. 1 Meno 2 Euthyd. 1 Phaedo 2; Rep. 8 Phaedr. 1 Theaet. 1; Soph. 6 Polit. 4 Phil. 7 Tim. 3 Legg. 6.

Gomperz recognised the conclusions reached by both Dittenberger and Schanz,

XXVI. GOMPERZ. Only these few observations of Schanz, with those of Dittenberger, became generally known to German philologers. They did not convince Zeller, but they were held sufficient for the stylistic definition of the latest group of Plato's works by another most competent historian of Greek philosophy, Theodor Gomperz ¹²³ (1887), of the University of Vienna. He

122 Martin Schanz, 'Zur Entwickelung des platonischen Stils' in Hermes, vol. xxvi. pp. 437-459, for 1886 (xxxi).

¹⁸³ Th. Gomperz, 'Platonische Aufsätze,' in Sitzungsberichte der Kaiserlichen Akademie der Wissenschaften zu Wien, vol. exiv. pp. 741–766, Vienna 1887 (xxxii).

repeated Dittenberger's observations, and insisted on their and he decisive importance as to the order of the Platonic dialogues. Gomperz argued that the more or less frequent recurrence of words does not lead to such certain conclusions as does the complete absence of certain words in certain dialogues; and in this he unconsciously agreed evidence. with Campbell, who also had chiefly directed his attention to the presence or absence of certain words in some dialogues. Yet it cannot be denied that observations on the comparative frequency or rarity of words give valuable confirmation of conclusions obtained from complete changes of vocabulary, and also that the number of words increasing in frequency is vastly greater than the number of expressions replaced by synonyms. have no reason to disdain supplementary evidence on a matter in which, as in other historical problems, even the greatest amount of testimony leads only to progressive probability.

insisted upon the importance of negative

XXVII. C. RITTER. The question of comparative recurrence was the object of the first book on Plato's style, a monument of patient labour, by Constantin Ritter 134 (1888), now teacher at the gymnasium of Ellwangen in Würtemberg. Until the publication of this book the investigations on the style of Plato were published as academic dissertations, articles in reviews, or as with great pro-Campbell, Riddell, Blass, and Peipers, in volumes on a different subject. Ritter was the first to write a special work on the matter, but he likewise knew only a few among his predecessors. He quotes Blass, Dittenberger, Frederking, Schanz, and Roeper, out of all the authors who had preceded him in studying Plato's style. But, tunities again, as with Droste, this incomplete bibliographical for the equipment did not prevent Ritter from achieving a great progress towards the full solution of our problem, and even perfecting earlier methods. He not only corrected numerical errors committed by Ditten-

C. Ritter knew only five out of his predecessors, but he achieved a gress in the study of Plato's style by measuring the opporoccurrence of different assertions and negations.

¹²⁴ C. Ritter, Untersuchungen über Plato, Stuttgart 1888 (xxxiii).

berger, Frederking, and Schanz: he introduced a new method of estimating the recurrence of words, undertaking to calculate the number of opportunities for the introduction of at least one important class of words used by Plato. Previous writers had only reckoned the words occurring—or the number of times each word recurred in each dialogue—or the proportion of occurrences to a page of text. Nobody had counted the number of opportunities for using a given word. This Ritter did, and found for various kinds of affirmative and negative answers a better basis of comparison than that of the proportion to a page of text. He accepted the sum of all such forms of answer as the number of opportunities for the occurrence of each special form of answer, and referred to this number the particular observations of each form.

This was an important step in advance as regards method, to which corresponded also a remarkable progress in the knowledge of Platonic chronology. Before Ritter only the order of the last six dialogues was well ascertained. His merit lies in giving a detailed justification of Campbell's earlier supposition that the group preceding the Sophist consisted of the Republic, Phaedrus, and Theaetetus. From the numerous observations of Ritter the following more especially characterise the latest group of six dialogues:

C. Ritter investigated a greater number of stylistic peculiarities than any of his German predecessors, and, though he did not

312. πρέπον αν είη (p. 6): Tim. 2 Legg. 16.

813. $\pi \hat{\omega}_S \kappa a \hat{\iota} \pi \hat{\eta}$ (p. 67): Phil. 1 Tim. 1 Legg. 2.

314. ὡς δυνατόν (p. 6): Phil. 1 Legg. 4.

315. καθαπερεί (p. 58): Polit. 1 Phil. 3 Tim. 1 Legg. 1.

316. χρεών (p. 6): Soph. 1 Polit. 1 Tim. 3 Critias 2 Legg. 57.

317. εἶπον predominates over ἔλεγον (p. 10): Symp. 3/2 Parm. 5/3 Soph. 4/1 Polit. 5/4 Phil. 5/4 Tim. 3/0 Critias 1/0 Legg. 24/6.

318. Answers such as ἔγωγε, ἔμοιγε, and the like (δοκεῖ μοι, ἐμοὶ γοῦν δοκεῖ) which denote a subjective assent, are very rare, occurring less than once in sixty answers (p. 17): Phaedr. 1/69 Parm. 7/486 Soph. 1/216 Polit. 3/251 Phil. 3/314 Tim. 0/13 Critias 0/0 Legg. 0/568 (in earlier dialogues they occur very often, namely, once in five answers in Euthyph. Meno, once in six answers in Lach. Euthyd. Gorg., once in seven to ten answers in Apol. Crito Charm. Crat.

Theaet., once in sixteen to eighteen answers in Prot. Phaedo know Rep.).

351. τὰ νῦν as adverb (p. 7): Charm. 1 Prot. 1 Phaedo 1 Rep. 1 Soph. 5 Polit. 5 Phil. 9 Tim. 5 Critias 3 Legg. 79.

352. καὶ μάλα (p. 28): Euthyph. 1 Euthyd. 1 Phaedo 1 Rep. 47 Phaedr. 3 Theaet. 4; Parm. 2 Soph. 4 Polit. 2 Phil. 7 Legg. 6.

353. Questions by means of $\pi \hat{oos}$ (p. 25): Lach. 1 Crat. 2 Phaedo 1 Rep. 48 Phaedr. 4 Theaet. 13 Parm. 3 Soph. 32 Polit. 36 Phil. 33 Legg. 47.

354. πάνυ μὲν οὖν prevails over πάνυ γε in (Ritter, pp. 22–28, corrected by Arnim, 144 p. 6): Crito 1/0 Rep. 64/40 Phaedr. 3/1 Theaet. 16/5 Soph. 14/10 Polit. 18/7 Phil. 23/9 Legg. 49/4, and is over half as frequent in Lach. 6/10 Prot. 3/3 Phaedo 21/23 Parm. 15/28.

355. χάριν (p. 59): Prot. 1 Gorg. 3 Symp. 1 Rep. 12 Phaedr. 8 Theaet. 4 Soph. 1 Polit. 3 Phil. 3 Tim. 7 Critias 2 Legg. 33.

These considerable additions to the number of peculiarities of Plato's later style led C. Ritter to the same general conclusions as those arrived at by Campbell twenty years earlier, namely that Soph. Polit. Phil. Tim. Critias Legg. are the last works of Plato, and that

Rep. Phaedr. Theaet. form a group preceding them. At the same time, other inquirers added new observations, all confirming this distinction of the above two groups of Plato's works, and happily avoiding repetition of work already done.

XXVIII. Walbe. The philological seminary of Bonn University, where the dissertations of Roeper and Hoefer were written, produced in 1888 a third doctoral dissertations on the style of Plato, by E. Walbe 135 (1888) who counted the occurrences of $\pi \hat{a}s$, its compounds and the expressions containing it. Of his predecessors he only lead to knew Roeper, Dittenberger, Hoefer, and Schanz. Among the same over a hundred uses of $\pi \hat{a}s$ enumerated by Walbe, the results, following deserve our special attention:

356. ξυνάπας (p. 3): Soph. 3 Polit. 1 Phil. 2 Tim. 3 Legg. 1. 357. οἱ ξύμπαντες οτ τὰ ξύμπαντα (p. 11): Soph. 1 Polit. 1 Phil. 1 Legg. 3.

358. πâs οὖτος οτ οὖτος πâs (p. 36): Crat. 1; Soph. 2 Parm. 2 Phil. 1 Tim. 2 Critias 1 Legg. 5.

359. πâs ὀστισοῦν (p. 37): Polit. 1 Phil. 1 Legg. 1.

360. τὰ πάντα γένη (p. 85): Soph. 1 Tim. 2.

361. τὰ πάντα εἴδη or μέρη (p. 35): Rep. 1 Theaet. 6 Parm. 4 portance Legg. 1. only to the

362. τοὐναντίον ἄπαν οτ ἄπαν τοὐναντίον (p. 16): Polit. 1 Phil. 1 frequency Legg. 3.

363. τὸ ξύμπαν (p. 9): Phaedr. 1 Soph. 1 Polit. 1.

364. πâν ζφον, meaning 'every animal' (p. 20): Rep. 1 Polit. 1 Phil. 2 Tim. 2 Legg. 5.

365. $\xi i \mu \pi as$ prevails over $\delta \pi as$ only (p. 4): Soph. 20/8 Polit. 45/18 Phil. 21/19, while in all other dialogues $\delta \pi as$ is more frequent, being in Tim. Legg. over twice as frequent as $\xi i \mu \pi as$.

366. $\pi \hat{a}s$ and its compounds occur over four times in a page ed. Didot (p. 4) in: Soph. 181 Polit. 239 Phil. 209 Tim. 375 Critias 67 Legg. 1290, rising in Polit. Tim. Critias Legg. to more than five and even up to seven times in a page, while in all other dialogues they are much scarcer (Euthyd. 102 Crat. 137 Symp. 142 Rep. 601 Theaet. 188 Parm. 91, elsewhere less).

367. ἀπας, ξύμπας, ξυνάπας occur over once in two pages in (p. 4): Apol. 12 Crito 7 Lach. 10 Prot. 22 Euthyd. 17 Parm. 17 Soph. 31 Phil. 42, and over once in a page in: Polit. 62 Tim. 62

Walbe's observations on πâs and compounds lead to though he made no methodic use of them. attaching chronological imonly to the of a few words.

375. $\pi \hat{a}s$ used with $\delta \lambda os$ (p. 38): Rep. 2 Soph. 1 Legg. 3.

Siebeck's observations on peculiarities of style explained by Plato's psychological evolution.

XXIX. SIEBECK. In the same year as Walbe's dissertation and Ritter's work was published an original investigation on Plato's style by H. Siebeck, 136 author of the History of Psychology. Siebeck, as a psychologist, sought for characteristics of Plato's style revealing changes in the author's state of mind which are capable of psychological explanation. He chose for his purpose the different classes of affirmative answers, and made a step further in the right method of calculating opportunities for the occurrence of each particular answer, not taking, as Ritter did, the sum of all answers as a comparative measure, but the sum of all affirmative answers only. Siebeck, moreover, classified all these answers and distinguished problematic, assertive, and apodictic affirmations. The apodictic affirmations, as for instance ἀληθέστατα, ὀρθότατα, παντάπασι, &c., are, as Siebeck shows, in all cases when the chronological order of two dialogues is known from other certain sources, more numerous in the later works. They form in the Republic

This is a progress in the

¹³⁶ H. Siebeck, *Untersuchungen sur Philosophie der Griechen*, 2° A., Freiburg in B., 1888, pp. 253-266: 'Nachträge die platonische Frage betreffend, I. Sprachstatistisches' (xxxv). Siebeck knew among his predecessors Dittenberger, Frederking, Hoefer, Schanz, and Gomperz.

fifty per cent. of all affirmative answers, and in the Laws method of fifty-four per cent. A similar relation is observed in the dialectic trilogy. In the Theaetetus Siebeck found thirtyeight per cent. apodictic answers, in the Sophist forty-two per cent., in the Politicus forty-nine per cent.—while in the Protagoras, generally recognised as an early dialogue, such answers form only fifteen per cent. of all. Moreover, in the separate books of the Republic we notice the those like progress from a more problematic to an apodictic certainty. In Book I we find thirty-eight per cent. apodictic affirmations, as in the Theaetetus; in Books II-IV they rise to forty-six per cent.; in Books V-IX to fifty-four per cent.; in Book X they decline a little, otherwise being fifty-three per cent. of all affirmative answers. would be an exaggeration to affirm that these numbers correspond precisely to the chronological order, because the special subject of each work gives greater or fewer opportunities for apodictic certainty, and if the Phaedo contains forty-nine per cent. apodictic replies, this is no sufficient reason for inferring that this dialogue was written after the Sophist; still, Siebeck's method of cal-Siebeck's culating the opportunities for different kinds of answers calculamarks a progress over Ritter's first attempt. Siebeck also counted the number of simple direct questions, without any interrogative particle, or with $\hat{\eta}$ or $\hat{a}\rho a$ or $\mu\hat{\omega}\nu$ only, in order to find the relative recurrence of these particles; and he found the percentage of questions with apa or $\mu \hat{\omega} \nu$ to be very high in the dialogues of the latest group. These investigations increase our list by some characteristics whose importance outweighs their number:

376. Over forty in each hundred affirmative answers are apodictic (p. 260) only in: Phaedo 83/168 Rep. 669/1342 show that Phaedr. 42/76 Parm. 159/394 Soph. 140/329 Polit. 130/268 Phil. 198/323 Legg. 312/578. In other dialogues the proportion is much smaller, coming nearest to the later style in Euthyd. 45|130 Gorg. 105|321 Crat. 77|238 Theaet. 101|263 (in these dialogues over 80 %).

377. To each problematic answer correspond at least four

stylistic study for chronological purposes, as can be tested on works whose chronological order is It known.

> tions add very important information to our knowledge of Plato's

apodictic affirmations and certain kinds of

interrogations increase in frequency in the latest group. apodictic answers or more: Phaedo 20/83 Rep. 141/669 Phaedr. 10/42 Soph. 31/140 Phil. 32/198 Legg. 69/312. In other dialogues the problematic answers occur much oftener, being less than one to three apodictic answers only in Euthyd. 12/45 Gorg. 32/105 Parm. 52/159 Polit. 35/130.

378. Interrogations by means of $\delta\rho a$ form 24 % or more of all simple interrogations: Parm. 50/207 Soph. 46/171 Polit. 31/106 Phil. 56/186 Legg. 95/329, while in all other dialogues $\delta\rho a$ is much scarcer, the proportion being above 15 % only in: Prot. 27/140 Crat. 34/172 Phaedo 31/161 Rep. 183/931 Phaedr. 11/72 Theaet. 39/229, and in other dialogues less.

Tiemann supplemented Ritter's observations and corrected them on some points, giving more detailed information on the use of participles and of some kinds of answers peculiar to

later style.

XXX. TIEMANN. Stylistic investigations on Plato became better known after 1888; those of Dittenberger, Schanz, Ritter, and Siebeck receiving most attention, but still they met with obstinate opposition, and Zeller continued to disdain them. J. Tiemann, 137 under the influence of Ritter's work, investigated the use of some participles with elval, and noticed among others the following peculiarities:

379. Particip. aorist. with εἶναι (p. 559): Polit. 2 Tim. 1 Legg. 1. 380. πρέπον with εἶναι: Lach. 1 Gorg. 1 Symp. 1 Tim. 2 Critias 2 Legg. 7.

381. προσήκων with είναι: Rep. 3 Phaedr. 1 Tim. 1 Legg. 2.

382. Part. praes. with eiva: Euthyph. 1 Prot. 1 Meno 2 Gorg. 2 Crat. 2 Symp. 1 Phaedo 1; Rep. 8 Phaedr. 3 Theaet. 3; Soph. 6 Polit. 8 Phil. 8 Tim. 4 Critias 1 Legg. 11.

383. Pleonastic use of participles (p. 556): Lach. 1 Prot. 1 Meno 3 Euthyd. 1 Gorg. 3 Crat. 1 Symp. 2 Phaedo 2; Rep. 14 Phaedr. 4 Theaet. 3; Soph. 7 Polit. 12 Phil. 7 Tim. 12 Critias 4 Legg. 24.

384. Periphrastic impersonal expressions (p. 556): Symp. 1 Rep. 1 Soph. 1 Polit. 2 Tim. 7 Critias 2 Legg. 10.

385. $d\lambda\eta\theta\hat{\eta}$ without $\lambda\epsilon\gamma\epsilon\iota s$ in affirmative answers (p. 586): Charm. 3 Lach. 1 Prot. 1 Gorg. 1 Phaedo 1 Rep. 29 Theaet. 9 Parm. 18 Soph. 7 Polit. 5 Phil. 2 Legg. 4. (The occurrence of $d\lambda\eta\theta\hat{\eta}$ in Prot. and Gorg. has not been noticed by Tiemann, nor by C. Ritter, but is mentioned by von Arnim 144 p. 9, and has been admitted here on his testimony, because an involuntary omission

¹³⁷ J. Tiemann, 'Zum Sprachgebrauch Platos' in Wochenschrift für klassische Philosophie, 1889, columns 248-253, 362-366; also in his extensive review of C. Ritter's work in the same journal, columns 791-797, 839-842, Berlin 1889 (xxxvi). The numbers for Parmenides omitted by Tiemann have been in some cases added from Arnim's (see note 144) publication.

appears more probable than a wrong observation, unless Arnim counted as simple $\partial \lambda \eta \partial \hat{\eta}$ some $\partial \lambda \eta \partial \hat{\eta}$ $\lambda \dot{\epsilon} \gamma \epsilon \iota s$, very common in earlier dialogues, is scarcer afterwards.

Already C. Ritter had noticed that the abridged forms $\partial \rho \theta \hat{\omega}s$, $\partial \lambda \eta \theta \dot{\epsilon} \sigma \tau a \tau a$, $\partial \rho \theta \dot{\sigma} \tau a \tau a$ without $\lambda \dot{\epsilon} \gamma \epsilon \iota s$, as well as $\partial \rho \theta \dot{\sigma} \tau a \tau a$ even with $\lambda \dot{\epsilon} \gamma \epsilon \iota s$, were limited to Rep. Phaedr. Theaet. Parm., and to the six latest dialogues, occurring nowhere earlier (342). Tiemann counted the occurrences of each of these forms of affirmative answers, and found that $\partial \rho \theta \hat{\omega}s$, $\partial \rho \theta \dot{\sigma} \tau a \tau a$, and $\partial \lambda \eta \theta \dot{\epsilon} \sigma \tau a \tau a$, with or without $\lambda \dot{\epsilon} \gamma \epsilon \iota s$, though not limited to the latest works, occur in them with increased frequency, and may therefore be looked upon as peculiarities of later style:

386. $\delta\rho\theta\hat{\omega}s$ with or without $\lambda \acute{\epsilon}\gamma \epsilon \iota s$ in affirmative answers (p. 586): Euthyph. 1 Charm. 1 Meno 1 Crat. 1 Phaedo 1 Rep. 35 Phaedr. 1 Theaet. 5 Parm. 18 Soph. 10 Polit. 17 Phil. 13 Legg. 24. (Arnim agrees generally with these numbers, but he found no $\delta\rho\theta\hat{\omega}s$ in Meno and Crat., and only two in Phil., 25–26 in Legg.)

387. $\grave{a}\lambda\eta\theta\acute{\epsilon}\sigma\tau a\tau a$ with or without $\lambda\acute{\epsilon}\gamma \epsilon\iota s$ in affirmative answers (p. 586): Lach. 1 Crat. 1 Symp. 1 Phaedo 4 Rep. 28 Phaedr. 2 Theaet. 7 Parm. 6 Soph. 5 Polit. 7 Phil. 16 Legg. 23 (Arnim Legg. 24).

388. ὀρθότατα with or without λέγεις in affirmative answers (p. 586): Rep. 10 Phaedr. 1 Theaet. 1 Parm. 1 Soph. 4 Polit. 8 Phil. 10 Legg. 12. Arnim: Rep. 11 Phaedr. 2 Soph. 5 Polit. 12 Phil. 12 Legg. 15 or 16. (In this and the preceding Nos. 385–387 the numbers for Parmenides, omitted by Tiemann, are quoted from Arnim, who slightly differs from Tiemann and Ritter in other numbers.)

XXXI. Lina. Simultaneously with Tiemann, Lina ¹³⁸ Lina published at Marburg a dissertation wherein he classifies no fewer than twenty-one thousand eight hundred and eighty-one occurrences of prepositions in Plato's works. From his lists the following confirmation of failer results is gathered:

Lina counted all uses of prepositions but failed to find a

¹⁸⁸ T. Lina, De praepositionum usu platonico; dissertatio inauguralis Marpurgi 1889 (xxxvii). Of his predecessors Lina knew Dittenberger, Schanz, and Ritter.

difference of frequency in their use between early and late dialogues, because he used a wrong measure of text. His observations teach us. however, a great number of peculiarities of later style. among which various kinds of interpositions are prominent.

389. $\kappa a \tau \dot{a}$ with the accusative prevails over all other prepositions except $\dot{\epsilon} \nu$ (p. 9): Crat. 75 Polit. 130 Critias 50 Legg. 697, and over $\dot{\epsilon} \nu$ in Soph. 115 Tim. 253. In these dialogues $\kappa a \tau \dot{a}$ cum according 12-15 % of the whole number of prepositions, while in other works it is much scarcer, reaching 9 % only in the Theaet. and falling to the fourth rank in Parm. (after $\dot{\epsilon} \nu$, $\pi \rho \dot{a} s$, $\epsilon \dot{a} s$), Phil. (after $\dot{\epsilon} \nu$, $\epsilon \dot{a} s$, $\pi \epsilon \rho \dot{a} c$), Legg. B. vi. x. xii. (after $\dot{\epsilon} \nu$, $\epsilon \dot{a} s$ and $\dot{\epsilon} \kappa$ or $\pi \epsilon \rho \dot{a} c$). The prevalence of $\kappa a \tau \dot{a}$ in some dialogues is so much the more characteristic, as in the whole of Plato's text $\dot{\epsilon} \nu$ (4148), $\pi \epsilon \rho \dot{a} c$ (3267), $\pi \rho \dot{a} s$ (2292), prevail much over $\kappa a \tau \dot{a} c$ (2065).

390. Twenty-one or more prepositions on each page (ed. Didot) occur only in: Phaedr. 819 Polit. 916 Tim. 1733 (32 in one page) Critias 363 (83 in one page) Legg. 5249 (22 in one page), over 19 in: Lach. 352 Phaedo 945 Rep. 3865 Soph. 757; over 83 in two pages in: Prot. 678 Symp. 737 Theaet. 885 Parm. 512 Phil. 778, elsewhere less. (In this case the superiority of Didot's edition over Teubner's, as a measure of text, is manifest. Lina gives for Polit. the proportion of 11 prepositions to one page, the same as for Prot., while from the numbers he quotes it results that one page ed. Didot contains in Prot. 17.4 prepositions, in This should be carefully borne in mind by all future inquirers, who wish to determine how often per page a word occurs. The proportion of 11 prepositions to one page ed. Teubner is given by Lina also for Lach., with 19.5 prepositions on one page ed. Didot; according to his calculations Symp. [18.9 prepositions on one page ed. Didot] and Phaedo [19.3] prepositions on one page ed. Didot would contain more prepositions [12 on each page ed. Teubner] than the Politicus [11 prepositions on one page ed. Teubner, and 21.3 prepositions on one page ed. Didot, while they really contain two prepositions less on each page ed. Didot. It follows that the standard of a page varies. and that we must be cautious in selecting a measure of text. So long as the ideal measure, the number of words of each dialogue, remains unknown, there is no safer standard than the pages of Didot's edition for measuring Plato's text.)

391. $\pi\epsilon\rho$ i c. accus. prevails over $\pi\epsilon\rho$ i c. gen. (p. 12): Symp. 40/39 Soph. 76/71 Polit. 92/53 Tim. 116/88 Critias 29/21 Legg. iii. v. vi. vii. 182/147. This is a very characteristic peculiarity, because in all other dialogues the predominance of $\pi\epsilon\rho$ i c. gen. over $\pi\epsilon\rho$ i c. acc. is so great that in the dialogues not specified by Lina 1552 $\pi\epsilon\rho$ i c. gen. correspond to 804 $\pi\epsilon\rho$ i c. acc.

392. κατά sundered from the corresponding accus. by δή (p. 14): Meno 1 Rep. 1 Parm. 2 Soph. 2 Polit. 1 Phil. 1 Tim. 1 Legg. 1.

 - 405. idem, by three to five words (p. 17): Crat. 2 Rep. 1 Phil. 1 Tim. 2 Legg. 3.
- 406. περί, sundered from the corresponding accus. by γέ (p. 18): Crat. 1 Legg. 2.
 - 407. idem, by δέ (p. 18): Gorg. 3 Rep. 1 Phaedr. 1 Theaet. 2 Soph. 3 Polit. 3 Phil. 2 Critias 2 Legg. 2.
 - **408.** idem, by $\mu \hat{\epsilon} \nu$ (p. 19): Gorg. 2 Rep. 1 Phaedr. 1 Theaet. 2 Soph. 3 Polit. 1 Phil. 1 Tim. 1 Legg. 3.
 - 409. idem, by $\tau \dot{\epsilon}$ (p. 19): Phaedo 1 Rep. 2 Phaedr. 1 Polit. 4 Phil. 1 Tim. 4 Legg. 9.
 - 410. idem, by a genitive (p. 19): Euthyph. 1 Lach. 1 Euthyd. 1 Crat. 1 Symp. 1 Rep. 3 Phaedr. 2 Polit. 1 Phil. 1 Legg. 3.
 - 411. idem, by two or three words (p. 19): Symp. 1 Rep. 2 Phaedr. 1 Tim. 1.
- 412. περί placed after the substantive which depends on it The very (anastrophe) was not very much used by writers earlier than Plato frequent (as for instance Thucydides), while in Plato it forms over 17 % of all occurrences of this preposition, and after Plato it became still more common. But this use is not equally frequent in all dialogues; it does not occur in Crito Charm., forms under 5 % of all occurrences of $\pi \epsilon \rho l$ in Prot. Euthyd. Crat. Phaedo, rises above 6 % in Apol. 2/24 Euthyph. 3/37 Meno 5/50 Gorg. 9/92 Symp. 3/39 Parm. 2/30 Critias 2/21, above 10 % in Lach. 10/78 Theaet. 14/123 Tim. 13/88; and above 20 % only in: Rep. 60

use of # épr in anastrophe begins with the Republic. and some

special
interpositions are
later more
frequent.

- (22 %) Phaedr. 18 (21 %) Soph. 16 (22 %) Polit. 11 (21 %) Phil. 21 (82 %) Legg. 139 (29 %) (calculated from the table given by Lina on p. 29).
- 413. Between a genitive and a following $\pi \epsilon \rho \iota$ belonging to it, is placed a $\gamma \epsilon$ (p. 26): Gorg. 1 Phil. 1.
 - 414. idem, δέ (p. 27): Gorg. 1 Rep. 1 Legg. 9.
 - 415. idem, δή (p. 27): Prot. 1 Phaedr. 2 Soph. 1 Polit. 1 Phil. 1 Legg. 8.
 - 416. idem, $\tau \epsilon$ (p. 27): Euthyph. 1 Gorg. 1 Symp. 1 Phaedo 1 Rep. 17 Theaet. 1 Soph. 1 Polit. 2 Phil. 3 Tim. 1 Critias 1 Legg. 12.
 - 417. idem, a genitive (p. 27): Phil. 1 Legg. 2.
- 418. Between a genitive depending on $\pi\epsilon\rho$ and the following $\pi\epsilon\rho$ is placed another word (not one of the above particles (413–416), but including the genitives counted in 417) or more words (p. 27): Apol. 1 Lach. 1 Rep. 1 Phaedr. 3 Theaet. 1 Soph. 3 Polit. 1 Phil. 3 Legg. 17.
- **419.** ἀνὰ λόγον (in the same meaning as κατὰ λόγον = in proportion) or ἀνὰ τὸν αὐτὸν λόγον (p. 85): Phaedo **2** Rep. **2** Tim. 6 Legg. **1**.
- 420. $\kappa a \tau \dot{a}$ c. genit. after a verbum dicendi in the same meaning as $\pi \epsilon \rho i$ (p. 37): Charm. 1 Meno 2 Euthyd. 1 Crat. 1 Symp. 1 Phaedo 1 Rep. 1 Phaedr. 1 Soph. 1 Legg. 2.
- 421. idem, after a verbum agendi (p. 87): Meno 2 Phaedo 1; Soph. 1 Phil. 1 Legg. 1.
- 422. κατὰ c. accus. to designate the direction of a movement (for which generally the genitive is used) meaning towards or to or in (pp. 39, 40): Symp. 1 (190 Ε: κατὰ τὴν γαστέρα) Phaedo 1 (114 A: κατὰ τὴν λίμνην) Rep. 1 (614 D) Tim. 8 Critias 4 Legg. 1 (905 A).
- 423. idem, metaphorically (pp. 89-41): Crat. 1 Symp. 4 (205 D: κατὰ χρηματισμόν etc.) Rep. 1 (896 D) Phaedr. 2 Theaet. 2 Parm. 2 Soph. 4 Polit. 1 Phil. 1 Tim. 2 Legg. 4.
- 424. κατὰ c. accus. to designate the diffusion of something over or through some space or place (p. 41): Prot. 1 (818 p.: κατὰ τὰς πόλεις) Crat. 1 Symp. 1 Phaedo 2 Rep. 1 Phaedr. 2 Theaet. 1 Tim. 18 Critias 1 Legg. 2 (indicatur aliquid per aliquem locum diffunds).
- 425. idem, metaphorically: Rep. 1 Theaet. 1 Parm. 1 Soph. 2 Polit. 1 Phil. 2 Legg. 6.
- 426. κατὰ c. acc. to designate a place (= in) in such phrases as κατὰ τόπον, or κατὰ χώραν, or κατὰ ἄστυ (κατὰ πόλιν is not counted, because Lina does not quote all the numerous occurrences of this phrase) (p. 43): Gorg. 1 Rep. 1 Tim. 4 Critias 4 Legg. 6.
- 427. κατὰ μέσον (p. 48): Phaedo 1 (118 A) Rep. 1 Soph. 1 Tim. 1 Critias 4 Legg. 2.
 - 428. κατὰ θάλατταν (p. 44): Rep. 1 Polit. 1 Legg. 9.

Also some meanings are prevalent in the latest works, as it results from Lina's enumerations.

429. κατ' ἀγοράν οτ κατ' ἀγοράς (p. 44): Rep. 2 Theaet. 1 Parm. 1 Polit. 1 Legg. 7.

430. κατὰ καιρόν (p. 47): Polit. 1 Legg. 2.

431. κατ' ἐκείνον τὸν χρόνον (p. 47): Polit. 2 Tim. 3 Legg. 5.

432. καθ ὖπνον (p. 47): Tim. 3 Legg. 1.

433. $\kappa a \tau \dot{a} \beta \rho a \chi \dot{v} = paulum, non multum (p. 57) : Soph. 2 Tim. 1$ Legg. 2 (In Prot. and Gorg. the same words mean according to Lina breviter).

434. κατὰ (τὸ) ὀρθόν (p. 57) : Soph. 1 Tim. 1 Legg. 1.

435. κατὰ μέρος (p. 59): Soph. 1 Legg. 2.

436. κατὰ μέρη (p. 59): Rep. 1 Theaet. 1 Parm. 4 Tim. 3 Legg. 2.

437. κατὰ μῆνα (p. 60): Rep. 1 Legg. 3.

438. κατὰ τύχην (p. 63): Rep. 1 Phaedr. 1 Soph. 1 Legg. 2.

439. δμοιον κατά τινα (p. 67): Phaedo 1 Polit. 1 Tim. 1 Legg. 1. except

440. τὸ (or τὰ) κατά τι (τὸ σῶμα, τὰς ἐπιστήμας, &c.), meaning 'ampliorem quam simplex substantivum notionem' (p. 71): Euthyd. 1 Gorg. 1 Phaedo 1 Rep. 1 Phaedr. 1 Soph. 1 Critias 1 Legg. 8.

441. κατά c. accus. without any grammatical relation to any part of the phrase, and meaning 'quod attinet ad,' is found only (p. 72): Meno 1 (72 A: κατὰ τὴν εἰκόνα) Rep. 1 (614 D: κατὰ τὼ έτέρω) Theaet. 1 (158 D: κατὰ τὰ ὅμματα) Phil. 1 (17 C: κατὰ τέχνην) Critias 1 (109 c: κατ' άλλους τόπους) Logg. 1 (812 A: κατά τὴν ὑπόθεσιν).

442. κατά c. acc. meaning 'quantum attinet ad' (p. 72): liarities. Symp. 1 (185 Β: καθ' αὐτὸν) Legg. 2 (715 D, 928 B).

448. κατὰ with the accus. meaning 'according to somebody,' or after somebody's fashion (p. 56): Apol. 1 Meno 1 Euthyd. 1 Gorg. 2 Symp. 2 Phaedr. 3 Theaet. 1 Parm. 1 Legg. 2.

444. κατά παράδειγμα or κατά συνήθειαν after a verbum dicendi or agendi (p. 52): Meno 2 Soph. 1 Polit. 2 Tim. 2 Legg. 1.

445. $\kappa a \tau a$ forming a hiatus with a following a, ϵ, η or o (pp. 22-23): Meno 2 Gorg. 1 Symp. 1 Rep. 5 Phaedr. 2 Parm. 3 Polit. 1 Critias 1 Legg. 5.

446. κατὰ θεόν (p. 63 divina quadam sorte): Euthyd. 1 Rep. 1 Soph. 1 Legg. 3.

447. κατά c. acc. in the distributive meaning after a verbum dividendi (except κατ' είδη διαιρείσθαι which is too frequent for enumeration, p. 58): Meno 1 Rep. 1 Phaedr. 1 Soph. 3 Polit. 3 Tim. 3 Legg. 3.

XXXII.-XXXIII. BARON. VAN CLEEF. After so Van many investigations on the Platonic vocabulary in three Cleef's years (1886-1889), the subject remained untouched during investigathe following seven years, though some authors wrote on

But he has made no chronological use of these observations, as generally all his predecessors Campbell ignored the methodical value of apparently accidental pecu-

tions on

attraction in Plato are very valuable. but as he did not distinguish the single dialogues he prevented our applying his work to chronology.

the use of other aspects of Plato's style, ignoring the relation between style and chronology. Compared with the laborious German dissertations, the French thèse of C. Baron 139 on the form of Plato's writings appears almost a rhetorical exercise. A student of the University of Bonn. Van Cleef. 140 of Ohio, spent much time in minute research on the use of attraction in Plato, but he deprived us of some additional characteristics of Plato's later style by mixing in his statistical tables dialogues of different dates without any distinction of single works. He followed Christ in uniting Rep. Parm. Soph. Polit. Phil. Tim. Critias Legg. into one class of so-called constructive dialogues; and he observed that the use of attraction, while occurring in the sum of Plato's works about thirty-eight times in every one hundred pages, is reduced in this group to only fourteen cases in one hundred pages of text. This result tends to show that attraction generally was not a peculiarity of later style, but we are left uncertain whether this refers equally to all the eight dialogues of the group, or only to some of them. The group which Van Cleef calls constructive dialogues contains, besides the recognised six latest dialogues, only Republic and Parmenides, so that we may admit as probable that the use of attraction decreased in Plato's later style; and as all the passages are enumerated by Van Cleef, whoever cared to undertake the task of a new classification and methodic disposition of the materials collected by him might draw very interesting chronological conclusions, or at least afford fresh confirmation to the chronological conclusions arrived at otherwise.

The same applies

GRÜNWALD. BERTRAM. XXXIV.-XXXV. the instructive collection of proverbs found in Plato by

¹⁸⁰ C. Baron, De Platonis dicendi genere, Paris 1891 (xxxviii).

¹⁴⁰ F. L. van Cleef, Ohianus, De attractionis in enuntiationibus relativis usu platonico (Doctor's diss. Bonn University), Bonn 1890 (xxxix).

E. Grünwald 141 it is again impossible to draw any chrono logical inferences, because proverbs are seldom repeated, and cannot be regarded as peculiar to any given period of Plato's style. Also Bertram's interesting contribution on the use of metaphor in Plato 142 contains nothing that could be included in our list.

XXXVI. CAMPBELL. All the foregoing writers on Camp-Plato's language, from Roeper to Van Cleef, ignored Campbell's Introduction to the Sophist and Politicus, though after the publication of Ritter's book Campbell again on several occasions recalled his first investigations. But he published these later articles in journals of limited circulation on the Continent, as the Transactions of Platonic of the Oxford Philological Society, or the Bibliotheca Platonica. 143 Consequently the coincidence of results between Campbell and the German style statisticians was known to none but the Scotch philologer himself, while the few generally known German dissertations naturally failed to secure a general recognition of the literature results obtained by them alone. There is reason to think that Campbell's more recent investigations on years ago. Plato's use of language, filling 175 pages in the second volume of the monumental edition of the Republic by Jowett and Campbell (3 vols., Oxford 1894), will likewise escape the attention of German and French students of Platonic style, unaccustomed to look for such original

also to publications by Grunwald and Bertram.

bell's recent publications deserve the attention scholars not less than his first contributions to Platonic thirty-five

¹⁴⁸ Transactions of the Oxford Philological Society, 1888-1889, pp. 25-42. June 14. On the position of the Sophistes, Politicus, and Philebus in the order of the Platonic Dialogues, and on some characteristics of Plato's latest writings,' by Professor Lewis Campbell of St. Andrews (xlii); and on the same subject in Bibliotheca Platonica, an exposition of the Platonic Philosophy edited by Thos. M. Johnson, Osceola, Mo. U.S.A. vol. i. July, August 1889, N. 1, pp. 1-28: Prof. L. Campbell: 'On some recent attempt towards ascertaining the chronological order of the composition of Plato's dialogues ' (xliii).

labours in the Appendices to an edition of a single dialogue. It would, however, exceed the limits of the present survey to epitomise this last work of Campbell, which should stand on the shelves of every philological library. Enough to state that this new publication of Campbell is of no less importance for our knowledge of Plato's style than his Introduction to the Sophist and Politicus written thirty years ago, and forms a splendid continuation of the work he began in 1861 by his edition of the Theaetetus. A full syntax of Plato's language, illustrated by quotations not only from the Republic but from other dialogues, it confirms in many details the close relation of the Phaedrus and Theaetetus to the Republic on one side, and of the Sophist, Politicus, Philebus to Timaeus, Critias, Laws on the other side.

XXXVII. Von Arnim. The want of centralisation in Platonic studies is illustrated by the curious fact that quite recently an author who undertook researches on one aspect of Plato's vocabulary, J. von Arnim 144 (1896), Professor at the University of Rostock, not only knew nothing of Campbell's publications, but even ignored Ritter's book, having read nothing on the style of Plato but the articles of Dittenberger and Schanz.

On the other hand, it is very instructive to note that von Arnim, after careful comparison of twenty-six cha-

144 Joannis ab Arnim, De Platonis dialogis, Quaestiones chronologicae, ad scholas quae in hac universitate Rostochiensi per semestre hibernum inde a d. XVI M. Octobris A. MDCCCXCVI habebuntur invitant Rector et concilium. Rostock 1896 (xliv). The numbers given by Arnim are in some cases different from the numbers given by C. Ritter. In such cases the larger number has been included in our list, because an omission is more likely to happen than that one passage should be counted as two, if the work is done carefully. But von Arnim sometimes changes his classification, so that he quotes different numbers for the same dialogue, as, for instance, twelve δρθότατα λέγεις in the Laws in § 13, and thirteen in § 14; two ἀληθέστατα λέγεις in the Politicus in § 10, and five in § 14; one δρθῶς λέγεις in the Politicus in § 14, and none in § 11, &c. Also his numbers for the peculiarities which have been collected by C. Ritter and Tiemann show some considerable differences, as, for instance, he did not find δρθῶς in the Philebus, while C. Ritter and Tiemann found it eleven times.

racteristic marks of Plato's style, came independently to many exthe same conclusions as Campbell in 1867, and as Ritter pressions in 1888. He recognised that Soph. Polit. Phil. Tim. Critias Legg. are the latest of Plato's works, and that the group preceding them contains the Republic, Phaedrus, Theaetetus, and Parmenides. Many of Arnim's observations are new, and furnish us with several additional peculiarities of Plato's later style:

448. ναί, πάνυ γε, πάνυ μὲν οδν form less than one-third of all affirmative answers (p. 6): Rep. 195 Phaedr. 11 Theaet. 58 Parm. 97 Soph. 71 Polit. 54 Phil. 52 Legg. 76, being in Rep. Phaedr. Phil. Legg. even less than one-fourth of all affirmative answers, rogations while they form in all earlier dialogues over one-third, and in and also Meno Euthyd. Gorg. Crat. even over one-half of all answers.

449. καλῶς and καλῶς ταῦτά γε, as affirmative answers (p. 9): Rep. 1 Soph. 2 Polit. 6 Legg. 6.

450. κάλλιστα and κάλλιστά γε as affirmative answers (p. 9): Phil. 1 Legg. 1.

451. Rhetorical interrogations meaning affirmative answers (as: τί μήν; ἀλλὰ τί μήν; τί γὰρ κφλύει; ἀλλὰ τί μέλλει; τί γὰρ οὐ μέλλει; τί δὴ γὰρ οὖ; τί γὰρ οὖ; τί δ' οὐ μέλλει; τί δ' οὖ; πῶς γὰρ ἀν ἄλλως; πῶς γὰρ οὐ μέλλει; πῶς γὰρ οὖ; πῶς δ' οὖ μέλλει; καὶ πῶς οὖ; πῶς δ' οὖ;) were increasing in Plato's later works. They form over 20 % of all interrogations in (p. 14): Phaedr. 14/62 Soph. 49/240 Polit. 46/210 Phil. 59/257 Legg. 105/209, over one-tenth in Euthyph. 6/44 Crito 2/14 Rep. 125/925 Theaet. 23/198 Parm. 38/298, over 5 % in Lach. 4/49 Gorg. 16/239 Phaedo 12/131 and less in Charm. 3/67 Meno 3/180 Euthyd. 1/68 Crat. 6/176.

452. Interrogations by τi prevail over those by $\pi \hat{\omega}s$ only in (p. 15): Phaedr. 12/2 Theaet. 15/8 Phil. 34/25 Legg. 58/55, while they are in all other dialogues much scarcer (being in Rep. 49/71 Parm. 9/29 Soph. 15/34 Polit. 22/24).

453. Interrogations asking for a better explanation of something said before (p. 16) are missed in many dialogues. They are found in: Lach. 4 Gorg. 1 Crat. 7 Rep. 62 Phaedr. 6 Theaet. 15 Parm. 3 Soph. 37 Polit. 41 Phil. 43 Legg. 63.

454. καλῶς, κάλλιστα, ἄριστα, ὀρθῶς, ὀρθότατα, δικαιότατα, καὶ μάλ' εἰκότως in affirmative answers with other verbs than λέγεις, namely, with εἶπες, εἴρηκας, ἀν λέγοις, εἶπών, εἴρηται, form a class missed in earlier dialogues, but found in (p. 11): Rep. 3 Phaedr. 2 Soph. 3 Polit. 7 Phil. 8 Legg. 17.

455. καλῶς, κάλλιστα, ἄριστα, ὀρθῶς, · ὀρθότατα, σαφέστατα, ἀληθέστατα, ἀγαγκαιότατα, used as affirmative answers without verb,

in one class and counting them together is somewhat arbitrary. He found that rhetorical interrogations interrogations asking for a better explanation of something said before are peculiar to later style. are limited to (p. 11): Rep. 59 Phaedr. 2 Theaet. 7 Parm. 18 Soph. 23 Polit. 38 Phil. 19 Tim. 1 Legg. 36.

456. εἰκός used in affirmative answers (p. 12): Lach. 1 Prot. 1 Meno 1 Gorg. 1 Crat. 3 Phaedo 5 Rep. 20 Theaet. 3 Parm. 2 Polit. 5 Phil. 3 Legg. 12 (in earlier dialogues ἔοικεν prevails).

457. Instead of the ordinary formula ξμοιγε δοκεί appear later a class of other similar expressions (δοκεί μοι, δοκεί γdρ μοι, μοι δοκεί, καὶ έμοὶ δοκεί, εὐοὶ μεν δοκεί, καὶ έμοὶ οῦτω δοκεί, οὐδ' ἐμοὶ ἄλλως δοκει, ἐμοὶ γοῦν δοκεί), which are found in (p. 12): Lach. 1 Meno 3 Crat. 7 Symp. 1 Phaedo 1 Rep. 18 Theaet. 2 Phil. 2 Legg. 1. (See above No. 337.)

bell's recent paper on the Parmenides shows that this dialogue has many words recurring only in the latest group and characteristic of Plato's later studies or of his inclination

to intro-

poetical

XXXVIII. CAMPBELL'S LAST OBSERVATIONS. As Campbell was the first to apply the study of Plato's vocabulary to Platonic chronology, so it happens that he also added thirty years later the final supplement to these investigations. 145 The position of the *Parmenides* had been one of the most difficult problems, and had been recognised as such by C. Ritter, who was even led to doubt the authenticity of this dialogue. Campbell recently undertook to prove that, however exceptional the stylistic character of this dialogue may be, it contains a considerable number of words peculiar to the latest group, or at least not used before the *Republic*, namely:

458. ἀπειρία meaning infinitas: Parm. 1 Phil. 1 Legg. 1 (numbers according to Ast).

459. διαμελετώ: Parm. 1 Critias 1 Legg. 1.

460. ἴσον as adverb : Parm. 2 Tim. 2 Critias 1.

461. ίστίον: Parm. 1 Legg. 1.

462. σύνδυο: Parm. 1 Tim. 1 Legg. 1 (in Symp. σύν τε δύ quoted from Homer).

463. μεριστός: Parm. 2 Tim. 1.

464. μόνως: Parm. 1 Tim. 1.

485. παμμεγέθης: Parm. 2 Legg. 1.

466. παντοδαπώς: Parm. 1 Legg. 1.

467. γυμνασία: Theaet. 1 Parm. 1 Legg. 2.

¹⁴⁸ L. Campbell, 'On the place of the Parmenides in the order of the Platonic Dialogues,' in the Classical Review for April 1896, vol. x. pp. 129–136. This closes the list of forty-five publications on the style of Plato here reviewed, out of which only twenty contained materials suitable for our chronological purposes, and included in our list of peculiarities.

Critias 1 Legg. 7.

Some other words quoted by Campbell, as μέτρον, όμοιῶ, όρμή, πέρας, περιέχω, might be included in our list, as they occur besides the *Parmenides* only in later dialogues and occasionally in *Meno* and *Cratylus*. But for the purpose of drawing our conclusions from these long enumerations, a round number of five hundred stylistic peculiarities (including more than fifty-eight thousand observations) is more convenient, and suffices to show by what method correct chronological conclusions can be obtained from such observations.

On the interpretation of stylistic observations.

Limitation of our choice of peculiarities of later style to those for which complete enumeration of occurrences might be found in the authors to whom we owe our facts.

In selecting the above five hundred peculiarities of Plato's style from the much greater number found in the writings of so many authors, the choice has been limited to characteristics occurring in one or more of the six dialogues held independently by Campbell, Dittenberger, Schanz, C. Ritter, and von Arnim to be the latest. Another limitation was imposed by the circumstance that the great majority of authors, ignoring the chronological bearing of their researches, often failed to state expressly whether a collection of passages containing a certain word or expression was intended to be exhaustive. and such enumerations could not be included in our list. though they might have been very suitable for our purpose, and were perhaps looked upon as complete by the investigators. A further deficiency of our list results from the circumstance that nobody has made such a special study of the vocabulary of other dialogues as Campbell has of the Sophist and Politicus. This gives in the above enumeration a prominence to these two dialogues slightly exceeding the real proportional measure.

Otherwise we may offer the above list as a fair and impartial sample of observations made on Plato's style, prepared without any preconceived aim other than the knowledge of facts necessary for a methodical inquiry into the question as to how far stylistic observations afford means of settling chronological difficulties.

The method of interpreting stylistic observations We need has been heretofore very defective in almost all the authors reviewed. Generally little care or thought has for the been given to the logical co-ordination of results obtained through tiresome philological labour. It seems that the elementary conditions of a calculation of probabilities by their numerical evaluation were utterly ignored by all except Lewis Campbell. This discredited the stylistic method in the eyes of impartial thinkers like Zeller. In order to obtain correct conclusions, future inquirers should avoid the following errors common to the majority of the authors above mentioned:

uniform measure of text has been used. the pages of the editions generally auoted being unequal. Of all existing editions that of Didot has been

> found to afford

the most

uniform

1. While a general notion of the necessity of measuring the length of each dialogue before comparing stylistic peculiarities was universally accepted, nobody tried to compare methodically the different possible measures; and the pages of Stephanus or of Teubner were considered nearly uniform, while they differ widely, according to the number of notes in Stephanus and the more or less dramatic character of the text in Teubner's edition: so much so that in the latter one page may contain twice as many words as another (see, for instance, p. 7 or 48, ed. Teubner, in Parmenides corresponding to thirty-four lines in Didot, and p. 425 in Politicus, occupying only twenty-one lines in Didot's edition). That this may greatly influence our conclusions, we have seen specially in the case of Lina's statistics of prepositions. Here for the first time a more precise measure has been found by comparing all the editions of Plato from Stephanus up to the present time. The pages of the editio princeps (Aldina 1503), though uniformly printed, are too large for a measure. Among modern editions measure the most equal pages convenient for comparison are of text. those of the edition of Didot. These are used in the following calculations; though the best measure would

method interpretation of facts than our predecessors. who did not apply much logic to philological labour.

be a hundred or a thousand words. This has not yet been applied to the text of Plato.

The number of peculiarities compared by most authors was ingufficient for valid conclusions. Isolated observations were given an exaggerated importance regardless of the nature of statistical evidence which always requires great numbers. Even the greatest number of observations used heretofore by Campbell would have been insufficient if

2. Nobody except Campbell had a correct idea as to the number of peculiarities required for correct conclusions. Campbell had compared hundreds of peculiarities and he was cautious enough to look upon his conclusions as only probable, not certain. Dittenberger and Schanz believed that a few important observations were sufficient for a stylistic classification of dialogues, wherein they came near to Teichmüller and Schoene, who decided the question of style on a single stylistic peculiarity. Ritter was so confident after an observation of forty peculiarities of later style that he declined further discussion with those who did not recognise the correctness of Even such a methodical author as Droste his view. was led to a wrong conclusion about the Phaedo by a very small number of observations. Kugler doubted the authenticity of the Parmenides because he found a dozen more occurrences of μέντοι than he expected in this dialogue. Von Arnim placed the Lysis after Symposium and Phaedo because he found τί μήν once used in this small dialogue. All such conclusions are based on an erroneous conception of the use of statistics. Style statistics, like all statistics, require great numbers. nearly seven hundred peculiarities observed by Campbell were insufficient to determine the place of Theaetetus. Phaedrus, and Philebus. If Campbell avoided in an admirable way the smallest error in his conclusions. he owes it not alone to the number of his observations. but to his intuitive estimate of their importance. dealt chiefly with very accidental peculiarities. words occurring only in two or three dialogues; and this explains why his great numbers were only sufficient for a determination of the latest group. In our own list we have many peculiarities of great importance, and thus, though the total number of peculiarities is smaller than in Campbell's calculations, our conclusions

not only confirm his results, but extend over some earlier not supdialogues, as to the order of which nothing could be inferred by previous authors from stylistic observations. We must lay it down as a rule for future inquirers that no inferences from less than some hundred peculiarities are valid, and that the correctness of the inferences from smaller numbers of observations made by Ditten-portance. berger, Schanz, C. Ritter, von Arnim, is due to the circumstance that they selected exceptionally important peculiarities.

plemented by a keen appreciation of their relative im-

3. Nobody has hitherto observed that only exactly equal amounts of text should be compared in order to give precise conclusions. Dialogues of different size were compared, instead of taking as a standard measure a certain amount of text of each dialogue. For this while only purpose it is necessary to quote the passages in which tions of every observed peculiarity occurs. As this has been done neither by Campbell, nor by Dittenberger, nor Schanz, nor C. Ritter, nor Tiemann, nor Siebeck, on whose observations a great part of our list is based, we peculiariare unable to introduce the required completeness into our calculations, but we shall make due allowance for the size of the compared dialogues, admitting as a rule that the stylistic comparisons are inconclusive unless the presumed later work is equal or smaller in size. A greater number of later peculiarities in a longer work can lead to valid conclusions only under exceptional circumstances.

Samples of text differing in extent were compared equal poitext are comparable. A greater number of ties of style may be expected in a larger work.

4. The different importance of stylistic peculiarities A classifihas not been accounted for, except by Campbell in one way, and by C. Ritter to a certain extent, when he distinguished the repeated peculiarities contained in Republic, Phaedrus, and Theaetetus, as well as in the latest group. This distinction is quite insufficient; and at least four degrees of importance must be accepted in order to give us the full advantage of the existing observations.

cation of peculiarities according to their degree of importance is necessary.

5. Nobody except Campbell made a proper use of accidental peculiarities, which are far the most numerous

Accidental peculiarities were

generally
disregarded,
though
they
afford
very valuable material for
statistical
calculations.

class of observations. Very important peculiarities are very few, while accidental coincidences may be found by the thousand. And their accidental character, even if fully recognised as accidental, does not deprive them of chronological importance, if sufficient numbers of such accidental coincidences are taken into consideration. The single occurrence is accidental, though it may be exceedingly significant, as, for instance, the occurrence of $\mu \ell \theta \epsilon \xi \iota s$ in Parmenides and Sophist. But if one dialogue has twice as many accidental coincidences with the Laws as another, this result is no more accidental than the difference of mortality between England and Spain.

Each peculiarity should be observed apart, not united with many others into one artificial class, except when the class as such is characteristic. This has been found only in a few Cases. while some pe**culiarities** counted together differ widely

6. The tendency to limit observation to peculiarities appearing to be important had the result that artificial classes of similar peculiarities were counted together. Sometimes such divisions are justified, as, for instance, Siebeck's classification of answers into apodictic, problematic, and assertive, or von Arnim's rhetorical interrogations and interrogations asking for a better explanation. Also the classes of newly invented adjectives, or of adjectives designating a species, are perfectly natural and characteristic. But in all such cases the single peculiarities forming a class should also be counted apart, whereby a much more exact numerical evaluation of affinity between different works might be secured. This has not been done by C. Ritter, nor by von Arnim, or at least they only give the total number of occurrences of different expressions not forming a natural class, as, for instance, ναί, πάνυ γε. πάνυ μὲν οὖν, which have nothing else in common than that they are the most frequent answers. This should be avoided in future investigations. Many very valuable observations were cast away as useless, because they did not show at once an evident difference between one group of dialogues and another. C. Ritter confesses to having traced through all the works of Plato many expressions, which he did not include in his tables, merely because they appeared not to be peculiar to well-marked

groups. All these observations have their value if they from each are treated by the right method. other.

Method of measuring stylistic affinities.

The above critical observations on the work of our A much predecessors are made in the hope that future inquirers will turn them to account. Our aim is not to add new facts, nor even to give an exhaustive survey of facts found by others. From Riddell's digest of idioms, from van Cleef's long enumerations, specially from Ast's Lexicon, and from nearly all the publications above quoted, it would be easy to collect some thousands of style-characteristics, instead of the half thousand included in our list. But the mere enumeration leads to no valid conclusions, unless we attempt an exact numerical definition of the affinities existing between several dialogues. For a first attempt to find a numerical equivalent of Lexicon stylistic affinity between various works not by mere counting but also by weighing of the evidence, we 'needed a greater number of facts than has been known heretofore to any single author; but we found that five hundred peculiarities, selected at random from the special investigations, were sufficient for our purpose. We feel But the also justified in limiting the comparison to twenty-two dialogues of unquestionable authenticity, which at the same time happen to be the only works containing some hints as to the logical theories of Plato, while the remaining spurious or doubtful dialogues are of no logical importance. Still, so far as these other dialogues have the been taken into account by some of the authors to whom method of we owe our facts, it appears that they contain a surpris- interpreingly small number of Platonic idioms. It is extremely exceptional to find a rare use of language illustrated by examples from other dialogues than those of admitted authenticity, even on the part of inquirers who had tive

greater number of peculiarities could easily be gathered from the authors reviewed. and a perusal of Ast's would raise the number to some thousands. aim of the present investigation is only to improve tation of facts, not to give an

survey of the facts observed. searched all the texts bearing Plato's name, including those which are generally recognised to be spurious.

In order to draw our conclusions, we begin by recognising four degrees of importance, distinguishing stylistic peculiarities:

The most numerous class is formed by accidental peculiarities. occurring only once in a dialogue. Such peculiarities acquire a chronological importance only when found in great numbers, though even a single occurrence is sometimes more or less significant according to the meaning of the word, and to the as-

I. The most numerous class are accidental peculiarities. such as words or idioms occurring only once in a dia-As a word cannot occur less than once, it is not less rare or less accidental when occurring once in a small dialogue than in a large one. In all such cases the observed coincidence is liable to be removed by some emendation, or might be due to an alteration of text, this being less improbable with small words than with longer ones. Therefore great numbers of such accidental peculiarities are needed to afford a measure of comparison. Within this class it would be easy to distinguish several degrees of importance. Really accidental is the recurrence of a word which was generally used by other authors, but which denotes some object about which Plato had no opportunity of writing except in two or three of his works. instance, Plato uses φιάλη only in Symposium, Critias, and Laws, this has no deeper reason than the accidental opportunity for the use of a word denoting a thing not usually spoken of by Plato. Such words have been generally excluded from our list, though they are not quite without value if they occur in very great numbers. as in every epoch the familiar circle of objects selected for examples is characteristic of the author's turn of It is, for instance, not quite accidental that yalkós is used six times in works later than the Republic. and only once in a work earlier than the Republic. Sometimes a word used only once in a dialogue may be very significant, as, for instance, μετάσχεσις in the Phaedo This is highly characteristic of a time when Plato was fond of inventing new logical terms, many of which were soon abandoned, like εἰκασία, διάνοια, πίστις in the special logical meaning which was given to these terms

This period could not be that imme- sociations in the Republic. diately following the death of Socrates, and it would be impossible to find a similar accidental occurrence in the Apology, while such new-formed words abound in the Phaedrus much more than in the Phaedo. A word occurring only once in a dialogue is still more characteristic if it is of constant use in some other work recognised as late. But in order to avoid complicating our evaluations, and to eliminate from them as much as possible every subjective element, we count as accidental all peculiarities occurring only once in one dialogue, including in this class also those peculiarities whose number of occurrences is unknown, as for instance all rare words observed by Campbell in the Sophist and Politicus.

II. The next degree of importance belongs to peculiarities repeated, or occurring twice in a small dialogue (Euthyph, Apol. Crito Charm, Lach, Critias), twice or thrice in an ordinary dialogue (Prot. Meno Euthyd. Crat. Symp. Phaedo Phaedr. Parm. Soph. Polit, Phil.), and two to four times in a large dialogue, such as the Gorgias, the Theaetetus, and the Timaeus. As to the Republic and the Laws, in dealing with these exceptionally large works we include in the class of repeated peculiarities every word or idiom which occurs twice or more, but less than once in twelve pages, as then it will be termed frequent. Thus the difference of extent is taken into account, although imperfectly, because the best method would be to take as a sample of style exactly the same amount of text from each dialogue. So long as we deal with each dialogue as a whole-and we are obliged to do so in consequence of the absence of detailed indications of passages in most of our sources—we are bound to the inconsequence of including in one class peculiarities of widely different degrees of frequency. A peculiarity occurring twice in the Euthyphro is found on average liarity as once in five pages, while one occurring twice in the Phaedo is found once in twenty-five pages. But all these repeated

it evokes. But these distinctions must be left for more special investigations, as they would introduce a sub-1ective element.

Another class is formed by repeated occurrences. This class includes different degrees of repetition according to the length of each dialogue. It will involve no exaggeration to counteach repeated equivalent accidental
peculiarities.
There is
also included a
greater
frequency
of some
very
common
expres-

sions.

peculiarities may be assumed to be more important than the accidental peculiarities, and for the sake of simplicity we count each as equivalent to two accidental peculiarities. If two hundred peculiarities of the first class were admitted as denoting a certain degree of affinity between two dialogues in which they are found, then we shall estimate a common occurrence of a hundred peculiarities of the second class as equivalent evidence for an equal affinity. Here we include also the following special peculiarities:

- 354. $\pi \dot{a} \nu \nu \dot{e} \nu \dot{e} \nu \dot{e} \nu$ more than half as frequent as $\pi \dot{a} \nu \nu \gamma \epsilon$, but not prevailing over it.
- 367. $\bar{d}\pi as$, $\sigma \dot{\nu} \mu \pi as$, $\sigma v \nu \dot{a}\pi as$ more than once in three pages, and less than once in two pages.
 - 390. Between 33 and 38 prepositions in every two pages.
- 412. $\pi \epsilon \rho \iota$ after the substantive, forming between 6 and 10 % of all occurrences of $\pi \epsilon \rho \iota$.
- 448. ναί, πάνυ γε, πάνυ μὲν οὖν being less than one-third but more than one-quarter of all affirmative answers.
- 451. Rhetorical interrogations between 5 and 10'% of all interrogations.

These peculiarities might easily be thought more important than other repeated peculiarities, so that we do not incur the danger of exaggerating observed affinities if we count each of them as equivalent to two accidental coincidences between an earlier dialogue and the latest group.

Important
peculiarities are
words
occurring
frequently
and a
number
of special
observations on
the prevalence
of one

III. There must be recognised a difference between a peculiarity occurring repeatedly and one that occurs much oftener. Peculiarities occurring more than twice in a small dialogue (Apol. Euthyph. Crito Charm. Lach. Critias), more than thrice in an ordinary dialogue (Prot. Meno Euthyd. Crat. Symp. Phaedo Phaedr. Parm. Soph. Polit. Phil.), more than four times in a large dialogue (Gorgias, Theaetetus, Timaeus), once in twelve pages or more in Republic or Laws, form a class of important peculiarities. This class will include a word occurring 20-117 times in the Laws, 5-26 times in Theaetetus or Timaeus, and generally any frequent repetition up to

once in two pages (ed. Didot), when we shall call it very frequent. Besides such peculiarities we include here the following special observations whenever they refer to a dialogue:

12. Being the first member of a tetralogy projected later—this refers only to Republic and Theaetetus.

- 13. Partial prevalence of other teachers over Socrates. This refers only to Symposium and Parmenides. For in Sophist Politicus Timaeus Critias Laws Socrates is already completely supplanted by other teachers, and this constitutes a more important characteristic.
 - 16. Periods less regular.
- 17. Natural order of words inverted, as generally observed by Campbell.
- 18. Recurrence of rhythmical cadence, as generally observed by Campbell.
 - 19. Balancing of words to achieve harmony and symmetry.
 - 20. Adjustment of longer and shorter syllables, idem.
- 23. Words common and peculiar to Timaeus, Critias, Laws more than once in two pages, but less than once in a page.
 - 200. ωσπερ less frequent than καθάπερ.
 - 206. ἀλλὰ μήν less frequent than καὶ μήν.
 - 306. τοίνυν more than four times oftener than μέντοι.
- 307. $\mu \dot{\epsilon} \nu \tau o \iota$ less than once in two pages, but over once in five pages.
 - 308. τοίνυν more than once in two pages.
 - 317. εἶπον prevailing over ἔλεγον.
- 318. Answers denoting subjective assent less than once in sixty answers.
- 325. Superlatives in affirmative answers more than half as frequent as positives, but not prevailing over positives.
 - 354. πάνυ μέν οὖν prevailing over πάνυ γε.
 - 365. ξύμπας prevailing over ἄπας.
- 366. $\pi \hat{a}s$ and compounds between four and five times in one page.
- 367. $\tilde{a}\pi as$, $\xi \tilde{u}\mu \pi as$, $\xi vv \hat{a}\pi as$ more than once in two pages, but less than once in a page.
 - 376. Apodictic answers between 80 and 40 % of all answers.
- 377. To each problematic answer between three and four apodictic answers.
- 378. Interrogations by means of $\delta\rho a$ between 15 and 24 % of all interrogations.
- 389. $\kappa a r \dot{a}$ c. accus. prevailing over all other prepositions except $\dot{\epsilon} \nu$.
 - 390. Between 19 and 21 prepositions in one page (ed. Didot).

over another or on some ger ral properties of style or literary composi-

pecu-

IV. There remains a class of peculiarities still more significant, of which a small number is equivalent to more than thrice that number of peculiarities of class I. To this belongs first a very frequent occurrence of any word or idiom, as for instance, 118 times or more in the Laws, 97 times or more in the Republic, generally more than once in every two pages (ed. Didot). Besides, we include here a small number of the most characteristic peculiarities of style, namely:

- 12. Belonging to a tetralogy as second or third member.
- 13. Complete substitution of other teachers for Socrates.
- 14. Didactic and authoritative character.
- 15. Quotations of earlier dialogues, preludes and recapitulations.
 - 21. Avoiding of hiatus.
- 23. Occurrence more than once in a page (ed. Didot) of rare words common and peculiar to a dialogue with Timaeus, Critias, Laws.
 - 307. μέντοι less than once in five pages.
 - 318. Answers of subjective assent entirely absent.
- 325. Superlatives in affirmative answers prevailing over corresponding positives.
 - 366. $\pi \hat{a}s$ and its compounds over five times in a page.
 - 367. ἄπας, ξύμπας, ξυνάπας more than once in a page.
 - 376. Apodictic answers more than 40 % of all answers.
- 377. Problematic answers fewer than one to four apodictic answers.
 - 378. Interrogations by apa more than 24 % of all interrogations.
 - 389. κατά with the accusative prevailing over έν.

390. More than 21 prepositions in a page.

412. πέρι placed after the word to which it belongs forming lent to four more than 20 % of all occurrences of $\pi\epsilon\rho i$.

451. Rhetorical interrogations forming more than 20 % of all interrogations.

as equivaaccidental peculiarities.

All these peculiarities being very important, it will be fair to count each as equivalent to two repeated, or to three accidental, or to one accidental and one important peculiarity.

In the above classification of peculiarities we have endeavoured to reduce to a minimum the relative importance of each peculiarity, in order to avoid every exaggeration of the measure of affinity uniting two dia-Any error committed will thus rather diminish the apparent affinities than increase them. If a word occurs once in each page, or more than two hundred times aggeration in the Laws, this will be counted as only four times more important than a single occurrence. Later inquiries may prove that this is a very low estimate of the importance But any classification of stylistic pecuof frequency. liarities according to their importance must take into account that importance is very far from being proportional to frequency. If one word occurs ten times in one dialogue and ten times in another, this is very far from being a link equivalent to ten single occurrences of ten different words in both dialogues. Our classification is here proposed not as definitive, but only as a first attempt at a numerical evaluation of stylistic affinities. Future inquirers dealing with many thousands of compared peculiarities may find reasons for a different classification. As our purpose is only to find the lowest figures, which may be increased later, but can never be diminished, the above distinction of four degrees of frequency and importance is sufficient.

Now, in order to apply our method, we must state value of clearly the highest hypothesis on which it is founded and affinities. define its terms. This highest hypothesis has been here-

The above standards of equivalence are minimal. in order to avoid exof affinities. Importance is not proportional to frequency, and increases at a much smaller rate. The above classification is not definitive, and aims at determining the minimal

tofore tacitly admitted, but has not been methodically dis-It is the following LAW OF STYLISTIC AFFINITY. cussed.

Of two works of the same author and of the same size, that is nearer in time to a third, which shares with it the greater number of stylistic peculiarities, provided that their different importance is taken into account, and that the number of observed peculiarities is sufficient to determine the stylistic character of all the three works.

As to the meaning of terms in this psychological law the following may be observed:

- 1. Nearer in time implies nothing as to priority, unless independent evidence is forthcoming that some one work of the author is the latest. In Plato's case the Laws are generally admitted to be such a work. But even were this doubted, a very great number of peculiarities observed would finally lead also to the determination of an order of priority, because the more varied style of an author has every chance of belonging to a later time.
- 2. A greater number of peculiarities does not mean any greater number, because if the difference is insignificant, no valid inference is allowed. We accept provisionally, as a minimum of difference between two works justifying chronological inferences, a difference of onetenth of the observed peculiarities, and in some special cases we shall even require a greater difference.
- 3. A sufficient number to determine the stylistic character must be a greater number than has been used generally heretofore, except by Campbell. But this depends upon the importance of each peculiarity. present case we shall assume that the occurrence of fifty out of five hundred peculiarities allows a probable inference, but that this probability approaches certainty only when a hundred and fifty peculiarities of later style are found in an ordinary dialogue.
- 4. The Laws are our standard of comparison for the next latest five dialogues, and for earlier works the group

Law of stylistic affinity. The numbers of observed peculiarities in

two works must differ at least by one tenth for valid chronological inferences. The total number of

peculiari-

ties dealt

with should exceed 150 in a dialogue of ordinary length. The Laws standard

of comparison. of the six latest dialogues, Sophist, Politicus, Philebus, Timaeus, Critias, Laws.

If now we ask how the law of stylistic affinity can be verified, the first and nearest answer lies in the psychological property of style as a mark of identity, entirely depending on the totality of familiar expressions at any time in the writer's consciousness. Every writer could find easily in his own experience sufficient evidence in favour of this psychological law. It has been suggested that it ought to be tested on the writings of a great than the modern writer like Goethe, as we know exactly when he author to wrote each of his works. But this way of testing it would cost an immense additional labour, and would still remain inconclusive, since an obstinate sceptic might object that the psychological development of Goethe differed from that of Plato-that the German language has peculiarities distinct from those of the Greek means of language, &c.

We propose, therefore, another and better way of testing, with special reference to Plato, the law of stylistic affinity, and at the same time also our own classification of stylistic peculiarities, which is subsidiary to our chronological conclusions, and requires even more strict works verification than the psychological law, which will appear obvious to many readers.

We have sufficient means of testing our method, if we take into account that, however little is positively known in Platonic chronology, there are some works connected by Plato himself into tetralogies, and therefore necessarily following each other, though perhaps at intervals. Further, there can be no doubt that the successive parts of a larger work, as a rule, must have followed each other, at least if the later part contains clear allusions to the preceding text. If, then, our method yields conclusions in agreement with these evident facts, larger we may confidently apply it to the solution of more work is difficult problems in Platonic chronology. We submit, later than

of stylistic affinities must be tested. A test on another author whom we apply it would be inconclusive. We have testing our principles and their consistency on the works of among which some are positively known to be later than others, for instance. the continuation

its beginning. Such tests

could be

therefore, to the impartial judgment of our readers the following tests:

collected in great numbers if all the authors had passages counted. A certain number of tests is taken from the comparison between earlier and later books of the Republic except the sixth and seventh books. with the following eighth and ninth. as their order is not quite certain. Any book is later

than the first, the

1. The first tetralogy sketched out by Plato consists of Republic, Timaeus, Critias (unfinished), with the Hermocrates, which was projected but never written. begin by comparing the first with the last book of the Republic, because some intermediate books have been considered by certain critics as later additions, while nobody doubts that the tenth book must be somewhat later than We find in the first book 28 accidental, 6 quoted the the first. repeated, and 3 important peculiarities of later style, amounting together to 49 units of affinity. In the tenth book, which is a little smaller and offers therefore even fewer opportunities for the occurrence of each peculiarity, we find 35 accidental, 14 repeated, 15 important, and 6 very important peculiarities of later style, equivalent to 132 units. For the sake of conciseness and easy comparison we express this stylistic relation in the following formula:

- 1. Rep. I 827-854 (20) pp. Did.): 28 (I) 6 (II) 3 (III) = 49 (I) \rightarrow Rep. X 595-621 (19\) pp. Did.): 85 (I) 14 (II) 15 (III) 6 (IV) = 132 (I).
- 2. It is equally certain that the fourth book of the Republic must be written later than the second. take for comparison two samples of text of a size nearly equal to the Symposium, we find the following stylistic relation:

Symposium 172 A-223 D (89 pp. Did.): 42 (I) 16 (II) 8 (III) = 98 (I).

2. Rep. II 857 A—III 412 A (87) pp. Did.): 47 (I) 20 (II) 22 (III) 2 (IV) = 161 (I).

→Rep. III 412 B-V 471 c (89 pp. Did.): 45 (I) 28 (II) 81 (III) 2 (IV) = 192 (I).

[Cf. Phaedrus (89 pp. Did.): 54 (I) 36 (II) 22 (III) 7 (IV) = 220 (I).

3. The above two tests can be confirmed also by comparison of larger samples. If we compare the last three books of the *Republic*, equal in size to the *Theaetetus*, fourth is with an exactly equal amount of B. II-IV, we find the later that following stylistic relation (the indications about the style of other dialogues are of course quoted here not as tests, but only for comparison):

```
3. Rep. II 368 a—IV 445 E (53 pp. Did.): 47 (I) 30 (II) 32 (III) 2 (IV) = 211 (I).

→Rep. VIII-X (53½ pp. Did.): 54 (I) 36 (II) 29 (III) 5 (IV)
```

[Theaetetus (53 pp. Did.): 58 (I) 41 (II) 31 (III) = 233 (I).]

4-7. As there is no doubt that the single books of the Republic were written in their present order (except B. V-VII, which are supposed to have been completed last of all), we may compare different parts of almost equal length, in order to see whether the later text always offers more peculiarities of later style. Such comparison given will be easily appreciated in the following short enumeration:

```
4. Rep. I 327-II 367 E (28 pp. Did.): 36 (I) 10 (II) 3 (III) = 65 (I).
```

 \rightarrow Rep. II 368 a-412 a (30 pp. Did.): 42 (I) 17 (II) 22 (III) 2 (IV) = 150 (I).

Cf. Euthydemus (28 pp. Did.): 22 (I) 5 (II) 7 (III) = 53 (I).

5. Rep. II-IV $(60\frac{1}{2}$ pp. Did.): 47 (I) 87 (II) 82 (III) 2 (IV) = 225 (I).

 \rightarrow Rep. V-VII (60 pp. Did.): 56 (I) 29 (II) 40 (III) 7 (IV) = 262 (I).

Cf. Gorgias (60 pp. Did.): 31 (I) 20 (II) 6 (III) = 89 (I). Cf. Phaedo (49 pp. Did.): 43 (I) 26 (II) 17 (III) 2 (IV) = 154 (I).

6. Rep. II 857 a–III 412 a (87 $\frac{1}{2}$ pp. Did.) : 47 (I) 20 (II) 22 (III) 2 (IV) = 161 (I).

→Rep. VIII-IX (84 pp. Did.): 47 (I) 22 (II) 27 (III) 3 (IV) = 184 (I).

7. Rep. II 368-IV 445 E (58 pp. Did.): 47 (I) 30 (II) 32 (III) 2 (IV) = 211 (I).

Rep. V 471 D-VII 541 (44 pp. Did.): 50 (I) 21 (II) 38 (III) 7 (IV) = 284 (I).

In the above seven test cases the earlier part has always fewer peculiarities of later style, and in every case

later than the second. etc. In each case the earlier text has fewer peculiarities of later style, the evidence as to priority being given by himself.

the evidence of priority is given by Plato himself, as we compared the acknowledged continuation with the preceding text. We excluded from our comparisons the relation of B. V-VII to the following books, because this part of the *Republic* in its present form has been supposed to be later, and cannot therefore be used as a test case. Many other parts of the *Republic* could be compared with equal lengths of text undoubtedly later, but the above seven samples give a sufficient notion of the text of the *Republic*, and we may now proceed to compare the *Republic* with *Timaeus* and *Critias*. A direct comparison between *Timaeus* and *Critias* is impossible, because the size of the two dialogues differs too much.

The same results from a comparison between parts of the Republic and the dialogues which are later, for instance. the **Timaeus** and Critias. The Critias

being

much

smaller

than any

book of the

- 8. In order to compare the Republic with the Timaeus, a good test is afforded by the last three books, which are equal in size to the Timaeus:
 - 8. Rep. VIII-X (58½ pp. Did.): 54 (I) 86 (II) 29 (III) 5 (IV) = 288 (I).
 - \rightarrow Timaeus (58 pp. Did.): 128 (I) 58 (II) 44 (III) 14 (IV) = 427 (I).
- 9. The *Critias* is almost too small for any comparison, being scarcely longer than half a book of the *Republic*. It is certain that the *Critias* is later than the last book of the *Republic*, and if notwithstanding its small size the *Critias* has more peculiarities of later style, this gives an evident confirmation to the law of stylistic affinity, and to the rules above admitted. We find:
 - 9. Rep. X (19 $\frac{1}{2}$ pp. Did.): 85 (I) 14 (II) 15 (III) 6 (IV) = 182 (I).
 - \rightarrow Critias (11 pp. Did.): 51 (I) 8 (II) 18 (III) 12 (IV)= 169 (I).

This test is specially important, because we have taken the last book of the *Republic*, apparently separated from the *Critias* only by the length of the *Timaeus*, and we have found that to the chronologic distance there corresponds a considerable stylistic distance between the

two works. We might add as test comparisons each of Republic the other books of the Republic, and we should find that shows a the Critias exceeds them all in number and importance of peculiarities of later style. But this being evident after our preceding comparisons, we need not insist book of the larger

10. In order to compare the Laws with the Republic, but earlier we must allow for the difference of size, the Laws being work.

43 pp. (Did.) longer. If we add the Gorgias to the To com-Republic, we obtain a whole slightly exceeding the Laws pare the in size and affording a convenient comparison, because nobody doubts that the Gorgias and Republic are both earlier than the Laws. It results:

10. Gorg. + Rep. as one whole (256 pp. Did.): 76 (I) 124 (II) 80 (III) 4 (IV) = 480 (I).

 \rightarrow Laws (288 pp. Did.) : 175 (1) 176 (II) 37 (III) 20 (IV) = 718 (I).

The Laws being acknowledged as the latest work of Plato, many new tests would result from a comparison of the Laws with different combinations of other dialogues equal together in size to the Laws. But as our list has been compiled on the principle of a selection of peculiarities of later style, and the standard of later style has been taken from the Laws and those other works which in style come nearest to the Laws, it might be denied that such tests confirm the law of stylistic affinity.

11. We turn to the other tetralogy indicated by Plato himself, and beginning with the *Theaetetus*. We compare first the *Theaetetus* with the *Sophist*, which is its recognised continuation according to Plato's own indisputable testimony:

- Theaet. (58 pp. Did.): 58 (I) 41 (II) 31 (III) = 283 (I).
 →Soph. (40 pp. Did.): 189 (I) 36 (II) 59 (III) 20 (IV) =
 468 (I)
- 12. The Sophist and Politicus are as closely connected as if they were one dialogue, and still there is a difference

shows a style later than even the last book of the larger work. To compare the Republic with the Laws. we must add some text to the smaller dialogue. Then we find that the style of the Republic is much earlier than the style of the Laws.

The two dialogues which were written by Plato as continuation of the Theaetetus also

show a

much later of style between them, the latter having more peculiarities style. of later style:

12. Soph. (40 pp. Did.): 189 (I) 86 (II) 59 (III) 20 (IV) = 468 (I).

→Polit. (43 pp. Did.): 163 (I) 43 (II) 56 (III) 19 (IV) = 493 (I).

Further tests are given by comparing those dialogues about the relative date of which there is a general agreement, for instance Phaedo with the preceding Meno, or Philebus with the preceding Parmenides. Also in this case our method confirms the best information obtained

otherwise.

13-14. The above twelve test comparisons refer to samples of text, for whose chronological order Plato himself has given clear indications. They confirm the law of stylistic affinity as well as the rules laid down for the application of this psychological law, including our classification of stylistic peculiarities according to the degree of their importance. We need not pause here to test our fundamental principles. There are some pairs of dialogues, which, though not forming one whole or not continuing each other as the above, are recognised as standing in a certain chronological relation because one of them contains allusions to an exposition which appears in the other. Many of such allusions are disputable, but there are at least two which are sufficiently recognised by all competent authors, including Zeller, to justify their use as tests. These are the allusion found in the Phaedo (72 E) to the theory of reminiscence first set forth in the Meno (82 B-86 A), and the allusion of the Philebus (14 c) to the difficulties of defining the relation between the One and the Many which are nowhere treated with such consciousness of the complexity of the problem as in the Parmenides (129 B-E and the whole dialogue). If now we compare the style of these four dialogues we find again a complete agreement between our own method of settling chronological difficulties and the most certain hints about the order of some dialogues obtained otherwise:

^{13.} Meno (28 pp. Did.): 20 (I) 16 (II) 8 (III) = 61 (I).

→ Phaedo (49 pp. Did.): 48 (I) 26 (II) 17 (III) 2 (IV) = 154 (I).

Here the difference of size could not be accounted for, but is compensated by the very great difference of style.

14. Parmenides (81 pp. Did.): 56 (I) 42 (II) 21 (III) 10 (IV) = 243 (I). \rightarrow Philebus (43 pp. Did.): 100 (I) 38 (II) 55 (III) 16 (IV) = 405 (I).

Here also the difference of size is more than compensated by the great difference of style.

- 15. Other similar allusions are too uncertain, and sometimes evidently mistaken, so that we cannot use But to remain within the limits of the them as tests. greatest probability, we may take for granted that the three small dialogues referring to the death of Socrates— Apology, Euthyphro, Crito—are earlier than the Symposium which nearly equals them in size. We find:
 - 15. Apology Euthyphro Crito as one whole (41 pp. Did.): 21 (I) 7 (II) 6 (III) = 53.
 - \rightarrow Symposium (39 pp. Did.): 42 (I) 16 (II) 8 (III) = 98.
- 16. It were easy to increase the number of similar Animtests by many others, taking the whole of Socratic dialogues as certainly earlier than Philebus, Timaeus and Critias, and our list offers sufficient material for comparisons which can be readily made by those of our readers who think that the above fifteen trustworthy tests are insufficient. We add only one test of a different character, in order to show how the coincidence of accidental characters operates on greater agglomerations Were our method wrong, it might happen that a certain number of single dialogues, each of which has been found earlier than one of the dialogues of another group, taken together as one whole and treated as to the distinction of degrees of importance in the same way as the Republic, would appear later than the group consisting of dialogues which taken individually are later. Now, a good test of the consistency of our method

A similar test is offered by the three short dialogues referring to the death of Socrates, which are earlier than the Symposium.

portant test of consistency is found by comparing groups of dialogues A group of dialogues which individually contain more peculiarities of style need not necestain also a greater number of peculiarities if the greater number were not caused by the later date.

sarily con. is to form two groups of dialogues, one consisting of dialogues which by individual comparison have been found to be earlier than the Republic, and the other of those which have been found to be later. Then, if our method and our rules are correct, the later group must show a greater number of peculiarities of later style than the Republic, while the earlier group must also have a smaller equivalent of affinity with the later style. Those dialogues which according to individual stylistic tests precede the Republic are the Phaedo, Symposium, Cratylus, Gorgias, amounting together very nearly to the size of the Republic. On the other side, the Theaetetus. Parmenides, Philebus, Timaeus and Critias form a group also equal in size to the Republic, and consisting of dialogues of which each has been found later than some part of the Republic. If we compare both groups with the Republic, counting as important only the peculiarities which occur in each group, at least so many times (17) as is needed to call them important, if they occurred in the Republic, then we find the following results:

> 16. Gorg. Crat. Symp. and Phaedo as one whole (191 pp. Did.): 50 (I) 84 (II) 8 (III) = 242 (I).

> →Republic I-X (195 pp. Did.): 81 (I) 110 (II) 80 (III) 4 (IV) = 407 (I).

→Theaet. Parm. Phil. Tim. and Critias as one whole (191 pp. Did.): 107 (I) 210 (II) 40 (III) 9 (IV) = 683.

This test of consistency has also an independent value for many competent Platonists who recognise that the Republic is later than Gorgias, Cratylus, Symposium and Phaedo, but earlier than Theaetetits, Parmenides, Philebus, Timaeus and Critias.

Our method thoroughly tested. as no stylistic

Now, having thoroughly tested our instrument of inquiry, it is fair to apply it to those more difficult problems of Platonic chronology, on which other investigators have heretofore failed to agree. First as to the date of the Theaetetus tetralogy, it results from the above,

that the Theaetetus must at least be later than the method first books of the Republic (see test comparison No. 3). The difference of style between the Theaetetus and the last books of the Republic is too insignificant to allow direct chronological conclusions, though it shows also that the Theaetetus has a greater number of peculiarities In order to decide whether the than B. VIII-X. Theaetetus is later than the whole of the Republic, we shall be obliged to have recourse to a 'longer way' than our present method. For the present we must be content to say that the Theaetetus is evidently later than the Symposium and Phaedo, as can be seen from the above A further important result from the tests 3 and 5. validity of our method is that the Phaedrus is undoubtedly later than the Phaedo, and the Phaedo later than the Symposium (see above tests 2 and 5). For the relation between the *Phaedrus* and *Theaetetus* the above observations afford no sufficient basis.

Many new investigations are needed to settle all details with the complete certainty which the above reasoning following shows to be possible in chronological inferences from table of stylistic observations. The present calculations, based on the work of others, are by no means sufficient to determine the order of all the works of Plato. For this it would be necessary to have a list of stylistic peculiarities ten times longer than our list of 500 stylistic characters. among which only very few are important, the majority being accidental. In order to enable the reader to extend facts comparisons similar to the above to other dialogues and groups of dialogues, the measure of relative stylistic affinities is given in the following table, which supplements Campbell's and C. Ritter's similar tables by a methodic co-ordination of over fifty-eight thousand facts, collected by twenty authors, of whom none knew more than a few of his fellows:

before, has been found consistent and trustworthy. It holds good in doubtful cases. But certain difficulties remain unsettled. What our calculations prove may be seen from the affinities, a condensed expression of over fiftyeight thousand hitherto little known.

TABLE OF STYLLISTIC AFFINITY FOR TWENTY-TWO DIALOGUES OF PLATO.

observed. For instance, in the Apology 9 accidental, 2 repeated, 1 important peculiarities of later style are equivalent to 16 units. The equivalent of the Laws being 718, it follows that the relative affinity of the EXPLANATION OF THE TABLE OF APPINITY.—Accidental peculiarities are words or idioms occurring once in a dialogue: repeated, those occurring more than once and less than makes it necessary, according to the size of the dialogue, to call them important. The number of occurrences termed important varies according to the size of the dialogue, and is indicated for each dialogue. Very important is any occurrence exceeding this number. The equivalent of affinity is calculated by counting each repeated peculiarity for two, each important for three, each very important for four units of affinity. The relative affinity is the proportion of the equivalent of a dialogue to the equivalent of the Laws for the same number of peculiarities Apology is 16/718 = 0.02. The same calculation is made for each dialogue.

In the enumeration of peculiarities appearing for the first time in each dialogue, the 500 observed peculiarities follow in their presumed chronological order. The next two dialogues in which each peculiarity recurs are given behind each number, in order to show the degree of importance the new peculiarity this peculiarity in the dialogue named. Where no index is given the peculiarity is accidental. For instance, 291: Phil. Legg.¹¹ means that peculiarity 291 (first occurring accidentally in the Republic, part d) recurs once in the Philebus and repeatedly in the Laws. Peculiarities occurring in the Republic are marked Theact. (cm du em) means that peculiarity 248 (first occurring accidentally in the Cratylus) recurs as acquired in the next time after its first appearance. An index appended means the degree of frequency of with the abbreviations of each part of the Republic in which they occur. For instance, 243: Phaedr ^{III} important in the Phaedrus, as accidental in Theaetetus, important in Republic part c., repeated in d, important in e. If the degree of frequency is different in two subdivisions of one part of the Republic, two indexes are given: buil means repeated in b., accidental in b.

Euthyd. = Buthydemus, Gorg. = Gorgias, Lach. = Laches, Legg. = Laws, Parm. = Parmenides, Prot. = Protagoras, Phil. = Philebus, Polit. = Politicus, Phaedr. = Phaedrus, Rep. = Republic, Soph. = Sophist, ABBREVIATIONS.—Apol. = Apology, Crat. = Cratylus, Charm. = Charmides, Euthyph. = Euthyphro, Symp. = Symposium, Tim. = Timaeus, Theaet. = Theaetetus.

I = accidental, II = repeated, III = important, IV = very important peculiarities.

The length has a great influence on the equivalent of affinity, but the peculiarities found in each sample of text is not proportional to the size. Single peculiarities are insignificant, and the order of small dialogues remains uncertain.

Among the inferences which can be drawn from the above table, nothing is of greater importance than the great influence of the size of a dialogue on the number of stylistic peculiarities found in it. We see that the Critias on its eleven pages contains less than half the number of peculiarities found in the Timaeus, which, being nearly five times larger, was written immediately before the number of Critias. Hence it results that eleven pages, being more than the size of the Crito and some other small dialogues, are insufficient for a stylistic determination, so long as we deal only with a few hundred stylistic tests. The difficulty might be removed by extending stylistic observation over a far greater number of particulars, a task which requires only additional research. But we understand at once that our equivalents of affinity for such small dialogues as the Euthyphro or Crito are very far from the truth, and that for instance no valid inference can be drawn from the apparently greater affinity of the Crito with the later style. This shows also the insignificance of a single test applied to such a complicated problem. One τί μήν; or one καθάπερ occurring anywhere proves nothing, if even seventeen peculiarities of later style found in the Laches and missing in Charmides are according to our rules no sufficient evidence for the priority of Charmides.

The increase of the equivalent of affinity is not proportional to the size of the sample of text investigated. Only equal amounts

We are warned also against the error of supposing the opportunities for the occurrence of a greater number of peculiarities to be proportional to volume. In this respect the subdivision of each part of the Republic into several samples of text is very instructive. Even those who believe the Republic to have been written during many years cannot deny that B III-IV are the immediate continuation of B. II, and with it form one whole. style of equal samples of text in these books is also very uniform. But the influence of the size becomes evident if we compare a small sample with a larger one. (357 A-367 E) of 7½ pp. (ed. Didot) contains only an

equivalent of 21 units of affinity, while the following of text are 29½ pages, being four times larger, have seven times more comparpeculiarities. In another case two succeeding samples of able so text differ much less, namely, c, (471 c-541 B), being nearly thrice as long as c, (449 A-471 B), has less than twice as many peculiarities of later style. The whole of hundred the Republic, being ten times larger than the tenth book, peculiaricontains only a little more than thrice as many pecu-ties liarities of later style. From these examples, which observed. might be indefinitely multiplied, it becomes evident that only equal amounts of text should be compared. Future inquirers should base their calculations on an amount of text equal for each dialogue, or divide each dialogue

into such equal samples of text, for instance, of ten thousand words each. Another lesson of the highest importance is taught by The the stylistic comparison of the first book of the Republic author's with the following books. Nobody doubts that the Republic in its present shape is one whole, and that the first book, even if mainly composed much earlier, has been revised and worked into unity with the following text. Now it has a surprisingly early style, having less character than half as many peculiarities of later style as the first of the sixteen pages of the fifth book, even fewer than the text, and Laches, which is inferior in size. This shows on one side the early date of the first book, and on the other side it shows that no revision can substantially alter those peculiarities of style which are the subject of our investigation. Therefore all explaining away of the late style of a work of the Phaedrus and Theaetetus by the supposition that even if we possess these dialogues in a late and revised edition is applied to

of no value whatever for chronological purposes.

long as we deal with a few

revision does not alter the essential stylistic stylistic comparison shows the relative date If later a later edition revision could alter stylistic affinities, then the first corrected book of the Republic, which must have been revised, by the emended, and corrected in order to be absorbed into author. the larger work, could not have remained as remote This is from the later style as the Laches, while already the very

for a knowledge of the date of the Phaedrus and Theaetetus which were revised by Plato later. The first book of the Republic undoubtedly revised and corrected has a surprisingly early style.

second book shows a style later than the Phaedo and Symposium. This conclusion is quite independent of any speculation on the exact date of the Republic, or on the date of the Laches. If anybody supposes that the first book of the Republic could have been written as early as the Laches (as Siebeck does), then he is bound to account for the difference of style between the Laches and the second book of the Republic. At all events, we have here a work which has been left by Plato as one whole, and which nevertheless betrays by stylistic tests the difference of the times in which it was begun and continued. According to our rules the number of peculiarities of later style found in the first book of the Republic is insufficient for an exact determination of its place among the early dialogues, and it may be even later than the Gorgias. To settle this question it would be necessary to collect a much greater number of observations, and to compare with the first book of the Republic a part of the Gorgias exactly equal in size. This we are unable to do, as a great number of authors from whom we have taken the number of occurrences of each peculiarity did not enumerate all the passages.

Relation between Philebus, Timaeus and dialectical dialogues remains also uncertain because so many special peculiarities of the Sophist and Poli-

The relation between the Philebus and Timaeus on one side and Sophist and Politicus on the other side cannot be decided according to our table, because we have included in our list more than one hundred words observed by Campbell in the Sophist and Politicus, while no such special study has been made of the Philebus, Timaeus, These words were included in the list and Critias. because the late date of the Sophist and Politicus is less generally recognised than the late date of the Timaeus, Critias, and Philebus; it therefore appeared necessary to bring out with the greatest clearness this late character of the two dialectical dialogues, even at the risk of making them appear later than the Philebus, Timaeus, and Critias. As soon as these later dialogues shall have been investigated with as much care as Campbell spent on the two

continuations of the Theaetetus, the true chronological ticus have order will not be obscured as it is now in the later part of been in-Even now it is easy to eliminate a part of the our table. error by excluding a number of peculiarities which have been first observed in Sophist and Politicus. peculiarities 12, 13, 54-181 of our list, reducing thus the total number to 370 peculiarities under investigation, then the Philebus will not be affected by this change, while the Laws lose 102 units of affinity, the Timaeus 53, the Politicus 86, and the Sophist 69.

cluded in our list.

The relative affinity calculated on these reduced Reducing numbers will be 0.65 for the Sophist, 0.66 for the Politicus, 0.66 for the Philebus, and 0.61 for the Timaeus. This calculation shows that the most important figures of our table are those of the relative affinity, which are very constant, and change little if they are calculated on a very much reduced or very much increased number of the Soobservations, changing less with the increasing number phist will of observations. We see that the relative affinity of the Sophist, which was found to be 0.65 for 500 peculiarities, is just the same for 370 peculiarities. It is probable that increasing our list to 5,000 peculiarities, this constant relation would not be altered by more than a small rises above percentage. We have therefore in the relative affinity a the Sopowerful instrument for chronological purposes, of the phist and same constant character as the physical constants measured in natural science. If the density of pure iron has been found by a series of experiments to be 7.8, relative everybody understands that further experiments of a affinity greater exactness can only alter this constant relation has the very slightly, adding new decimals and showing it to be character more exactly 7.84, but never 7.5 or 8.0. We claim the same permanent character for the relative affinity, calculated on a sufficient number of observations. Comparing these numbers, calculated on a smaller or greater part of constants our materials, we have found that relative affinities under in 0.1 have no value whatever, and can be changed to the physical

our list by 130 peculiarities, the relative affinity of not be affected. and that of the Philebus even the Timaeus. natural

science.
This gives
an unprecedented
strength
to our conclusions.

extent of at least half their value by calculations based on a greater number of observations. But the remaining relative affinities in our list are exact in their first decimal, and any number of observations added can increase them only in the second decimal, except in the *Philebus* for the reasons explained above. But even the *Philebus*, if we measure its relative affinity by one decimal, will maintain it, whatever number of new observations may be added. Thus we claim to have proved the following general conclusions about the order of the works of Plato:

The latest group of Plato's works consists of the Sophist. Politicus. Philebus. Timaeus, Critias. and Laws, with a relative affinity of OVAT 0.5 in sa mples of text exceeding forty pages.

1. The latest works of Plato are: the Sophist, Politicus, Philebus, Timaeus, Critias, Laws. This group is distinguished from all other works by a relative affinity of over 0.5 in samples of text exceeding 40 pages (ed. This means that out of any number of stylistic peculiarities investigated (provided those peculiarities are selected which are not limited to one dialogue, and provided the number of peculiarities so investigated exceeds 300) more than half the number found in the Laws will be found in any sample of text of 40 pages of these dialogues. As the Critias has only 11 pages, for the investigation of the Critias the preceding 29 pages of the Timaeus must be added. Or, if we calculate the relative affinity of the Critias apart, it must be compared with an exactly equal amount of text of the Timaeus: then it cannot be expected that the relative affinity of such a small portion of text should exceed half the value of the affinity of larger units, as the relative affinity is in close relation to the amount of text to which it is applied. With an increasing number of peculiarities observed, the influence of the size of a sample of text would be less important, and the size of the Critias is insufficient to define its stylistic affinity only so long as we deal with a reduced number of observations. number of possible peculiarities of style is practically infinite, and may easily exceed the number of words contained in a sample of text.

2. The latest group is preceded by a middle group, consisting of Republic B. II-X, Phaedrus, Theaetetus and Parmenides. In these the relative affinity is under 0.5, and even under 0.4 for samples of text of 30-60 The mean affinity of dialogues belonging to this group is only 0.3, or only half as much as the affinity of equal dialogues of the latest group. The middle group is distinguished from all earlier dialogues by a great number of important and very important peculiarities appearing here for the first time, as may be seen from the table.

middle group shows a relative affinity of about 0.3.

- 3. The middle group is preceded by a first Platonic The group, consisting of three dialogues, Cratulus, Symposium, and Phaedo, which are characterised by a relative affinity inferior to that of equal samples of text of the middle group, being about 0.2, and not exceeding 0.21 for samples of text of 40-50 pages. The first Platonic group is distinguished from all Socratic dialogues by many special relative peculiarities appearing here for the first time, and indicated in our table.
 - Cratylus, Symposium. Phaedo are earlier. having a affinity of only 0.2.
- 4. Among the Socratic dialogues, which show an That the apparent relative affinity of 0.1, or even less, the Gorgias appears with probability to be the latest, having 18 peculiarities in common with the first Platonic and later groups, which are missed in other Socratic dialogues. But this number, which was held to be sufficient by C. dialogues Ritter to define the middle group, is according to our is proimproved method insufficient, and affords only a certain bable. probability, increased by internal evidence resulting from the comparison of contents, but requiring further support by a much greater number of observations.
- Gorgias. is the latest of all Socratio
- 5. Last, not least, we repeat the important conclusion, which is perhaps the greatest gain of our investigations, viz. that stylistic tests if properly directed afford certainty as to the chronological order of Plato's dialogues; and conclusions from stylistic comparisons cannot be invalidated by assuming fictitious later editions, corrections

Certainty of stylistic conclusions independent of

supposed revisions.

and revisions, as it has been seen on the first book of the *Republic* that such later changes cannot affect the essential characteristics of style as these are now known.

Phaedo later than Symposium and Cratylus: Parmenides later than Theaetetus and Phaedrus: Philebus later than Sophist. Other minor questions will easily be decided by the same method if applied on a larger scale. Our conclusions confirm earlier conclusions arrived at by stylistic study and completely change

The above five conclusions are worth the labour spent on our study of Plato's style. We do not pretend to give for certain anything more about the order of dialogues within each group, except that the Phaedo is later than Symposium and Cratylus, the Parmenides later than Theaetetus and Phaedrus, the Philebus later than the The relative position of Republic, Phaedrus, and Theaetetus, of Politicus, Philebus, and Timaeus, cannot be decided on the above observations alone. problems are of less importance than the distinction of groups, and now that the method of stylistic calculation has been shown on a small example of five hundred peculiarities, it will be very easy to apply it on a much larger scale, and to settle all the minor difficulties left to future inquirers. It is to be hoped that nobody hereafter will attempt to judge about Plato's style from small numbers of observations. Any new observations ought to be added to those existing, in order to achieve a progress of knowledge in these matters. The group of the latest six dialogues, recognised independently by Campbell, Dittenberger, C. Ritter, and von Arnim, is now still better defined and is established beyond all reasonable doubt. The anomaly observed by Campbell as to the Philebus, Parmenides, and Theaetetus, is removed, and the true place of these three dialogues found in accordance with their style. This entirely changes the current traditional conception of Platonism, as taught by Schleiermacher and Hermann, and still in our own day represented by the great name of Zeller. The differences between these authors become insignificant in view of their grave and common error in placing the dialectical dialogues before the Symposium and Republic. This error produces a complete distortion of the true view of Plato's philosophical career. It is as if some eminent critics proposed to look upon Kant's Kritik der reinen Vernunft as a juvenile eccentricity, and to seek the chief contents of Kant's philosophy in his Principiorum primorum cognitionis metaphysicae nova dilucidatio, published in 1755, and written under the influence of the then prevailing philosophy of Leibniz and Wolff.

We should fall into the error of premature generalisation if we pretended to go further in our conclusions and to decide anything about the order of Socratic dialogues in which the relative affinity sinks below 0.1. strument is not fine enough for these small differences between dialogues probably removed forty years from the Critias and from the latest books of the Laws. determine their order, another standard is required than the Laws, with which they have too little in common. The Gorgias being the latest and also the longest of the group of Socratic dialogues, the best plan would be to collect and classify peculiarities common to each of them with the Gorgias. But if five hundred peculiarities were needed to fix the order of dialogues later than the Gorgias, for those earlier a much greater number of observations is required, and can be reached only through well-organised labour of many scholars.

A distinction of only four degrees of importance of Theclassistylistic marks might ultimately prove insufficient, but fication of even if we classify the peculiarities observed otherwise, it peculiariwill always be indispensable to make due allowance for the different importance of accidental, repeated, frequent, and very frequent peculiarities, as well as for the more or less essential character of certain observations.

One of the most immediate aims for further inquiry The order is to investigate peculiarities in the order of words and of words in the construction of phrases. By means of a great and connumber of such peculiarities it will be possible to determine the relative affinity of all dialogues among each other, and this alone will probably lead to the

current conception of Platonism. Proposed subjects for future inquirers. They must compare each dialogue with all others. and specially all Socratic dialogues with the Gorgias.

ties can be improved.

struction of phrases should be

definitive solution of all difficulties of the Platonic chronology.

There is no reason to fear that the amount of time

A revision of work already done is คโสด necessarv. Number of words in should be counted. Our method can easily be applied to other problems than Platonic

spent on such inquiries will be lost. In every science there arises at certain points a necessity for much detailed research leading to no new conclusions, and only confirming previous generalisations. The familiar example of modern organic chemistry shows that valuable investigations were made by beginners, following a method already fixed, with each work results foreseen by general theory. Such investigations, though they teach us few new truths, increase the certitude of the general theory which they illustrate. Further study of Plato's style will probably not change our knowledge as to the order of the three groups which are now found, but it may modify our views concerning the order of dialogues within each group, and may help to fix the order of earlier dialogues, which is at present uncertain.

chronology, and leads to a new science of stylometry subsidiary to historical research.

Besides further research on the lines here indicated a systematic co-ordination of the results already obtained is also necessary. There are discrepancies between the numbers given by various authors for the occurrence of the same peculiarity, and the calculation of proportions between different uses might be very much The number of words contained in each improved. dialogue should be taken as the true measure of text and of the opportunity for the occurrence of expressions for which no better calculation of opportunities can be found.

palaeography. Greater certainty of results obtained by the investiga-

tion of

like

When once the importance of this field of research is generally recognised, it will very soon appear that the exact determination of style is the safest way of settling the difficulties, not only of Platonic chronology, but also of the chronology of other authors, the date of whose writings is unknown. There will be scarcely another case in which the mere question of the chronology of some writings would be of such unparalleled importance style than for the history of human thought as in the question of

Platonic chronology. This exceptional importance of by any inone particular case will have produced a new science of formation style, which will enable us to decide questions of authen-based on ticity and chronology of literary works with the same certainty as palaeographers now know the age and authenticity of manuscripts. This future science of stylometry may improve our methods beyond the limits of imagination, but our chief conclusions can only be confirmed, never contradicted by further research. That the dialectical dialogues are later than the Republic is now as clearly demonstrated as any other fact in history can be. Equally certain is the conclusion that the Republic, Phaedrus, Theaetetus, and Parmenides are later than the Phaedo and Symposium. These facts must be accepted now as if they were supported by the clearest testimony. The certitude attainable by a consistent theory is even much greater than the certitude of the best evidence; every astronomer believes himself to know more of the present and past movements of the moon than an historian can know of the movements of Caesar's Historical testimonies have always but the value of the sensible evidence on which they are based, while our results as to the order of Plato's works rely on the higher authority of reason, producing, according to Plato, infallible knowledge whenever a good method is followed.

mere testimonies.

CHAPTER IV

SOCRATIC STAGE OF PLATO'S LOGIC

tinguished from other works of Plato.

Small dia- When the Platonic works are compared with regard to logues dis- their volume, we find a numerous class of dialogues which do not attain to half the size of the Protagoras, and which can be distinguished from the rest as small No fewer than eight among them, the dialogues. Clitopho, Minos, Hipparchus, Epinomis, Theages, Amatores, Alcibiades II. and the Greater Hippias, have since Schleiermacher been generally regarded as spurious. They represent seventy-two pages of text (ed. Didot), less than one-third of the Laws, and contain nothing that could be included in Plato's logic.

Their chronological order very difficult to determine onaccount of their size.

The Io, Hippias Minor, Lysis and Menexenus, though successfully defended against doubts as to their authenticity, remain outside the pale of our inquiry. All these small dialogues offer greater difficulties than larger works, because their limited volume makes a complete appreciation of their style and doctrine less easy. require a special study through which their mutual relations might be determined and a certain place assigned to each of them. Such an inquiry would alone fill a volume, if it were intended to lead to definitive conclusions, based on a careful weighing of many details. So long as their chronological order has not been determined by patient and impartial stylometric inquiry, we must for our part abstain from all attempt to fix this order from the few logical hints which they contain.

A Socratic stage in

The existence of a Socratic stage in Plato's logic is far more probable than the myth of a Megaric period.

We have the clear testimony of Aristotle (Metaph. 987) b 1) that Plato owed to Socrates the tendency to form exact definitions of ethical notions. It is precisely in the small dialogues that we see the illustration of this tendency. In another passage Aristotle teaches us that the direct philosophical merits of Socrates were inductive reasoning and definition by means of general notions (Metaph. 1078 b 27). In the small dialogues we find accordingly the constant employment of inductive reasoning and repeated attempts to define by means of the nearest general notion, in application chiefly to ethical purposes. Though faithful even in his later period to induction as a method of investigation, Plato gave in his dialectical works a far greater importance to deductive classification. The thoroughly inductive character of the small dialogues is more Socratic than Platonic. influence of Socrates on Plato is not, like the alleged Megarian influence, attested only by a late and untrustworthy witness: it is known from numerous passages in the writings of Aristotle, and results also from the manner in which Socrates is again and again represented by Plato as the teacher of true wisdom.

Plato's development very probable. because we know from Aristotle that Plato much to Socrates.

Were it not for Plato's strange desire to represent. in more than twenty literary masterpieces, his own thoughts as enunciated by Socrates, we might have given to the latter no more credit than to Anaxagoras. Heraclitus, or Parmenides, nor would his name even to-day be synonymous with Sage. Hence it is natural to suppose a Socratic stage in the development of in his Plato's philosophy, and to seek for the vestiges of this period in his works.

These vestiges are precisely found in the small Socratic dialogues, and in the four works in which Socrates is represented as triumphant over the sophists. are the traditional sixth tetralogy, consisting of Protagoras, Meno, Euthydemus and Gorgias, which form a natural group, though they have not been connected by and in

and it results also from the picture of Plato's teacher dialogues

influence specially visible in the small dialogues the sixth tetralogy. All these works have chiefly moral aims. Plato himself into one series. They have in common with the small dialogues the predominating ethical aim, and they deal with the definition of virtue and various parts of virtue, as well as with the question whether virtue can be taught. Such ethical questions are abandoned in later works: even in the *Philebus*, where the avowed aim is the solution of an ethical problem, the whole argumentation takes a metaphysical and logical turn, which is wholly absent from the small dialogues and from the four others above named.

Also Socrates' philosophy had a predominant ethical character. The character of Socrates' philosophy was also mainly ethical, and this authorises us to see the predominance of Socratic influence in those dialogues which are limited to ethical inquiry. Plato's own philosophy had another character: he was rather a politician, a metaphysician, and a logician, than a simple moralist. He set perfection above mere virtue, and even despised the traditional virtue of the common citizen, which was the starting point of Socratic ethics.

Socratic dialogues are the earliest. We shall not be far from the truth, if we admit that the small dialogues are earlier than the logical investigations which commence with the *Cratylus*, and are continued in the *Phaedo* and *Republic*. For an exact determination of their order the data are not yet collected, because their style is very much less characteristic than the style of the latest group. We can only observe, that of all peculiarities of later style only very few and unimportant examples are to be found in the small dialogues.

Of all small dialogues only Euthy-phro, Apology, Crito.

For the investigation of the development of Plato's logic only five among them are of any importance: the trilogy about the death of Socrates, consisting of the *Euthyphro*, *Apology*, *Crito*, and the two companion dialogues of the *Protagoras*, namely the *Laches* and *Charmides*. We omit the first *Alcibiades*, though its authenticity has been sustained by Socher, Stallbaum,

Hermann, Steinhart, Andreatta, 146 and Kophiniotes, 147 against Schleiermacher, Ast, Susemihl, 148 R. Hirzel 149 and many others. Strong suspicion is roused by the noticeable contradiction between style and contents in this dialogue. According to its style the Alcibiades would be later than the Symposium, while the general contents place it among the small dialogues, as has been recognised by all defenders of its authenticity. Quite recently Ivo Bruns, 150 by com- Alcibiades paring the characterisation of persons in Plato's dialogues, came also to the conclusion that the first Alcibiades could not have been written by Plato.

As to logical contents, the Alcibiades presents, besides Identity some theories sufficiently known from other works of Plato, a singular identification of the soul with man (130 C: μηδεν άλλο τον άνθρωπον λείπεται συμβαίνειν ή ψυχήν), which recalls a passage from a notoriously spurious dialogue (Axiochus 365 E : ἡμεῖς ἐσμεν ψυγή). In the Gorgias (464 A) every man is supposed to consist of is unplasoul and body, and at all times Plato defined man as an tonic, and animal (Crat. 399 c, Polit. 271 E, Legg. 765 E, &c.), with a soul (ψυγη ἀνθρώπου Prot. 312 B, Symp. 192 D, Phaedr. 249 E, Rep. 590 A, &c.); the identification of man and soul seems to belong to some later Academicians. This contradiction between the first Alcibiades and the of Plato. current Platonic teaching on an essential point is not of the same kind as many quite superficial contradictions quoted by those who oppose the authenticity of some of Plato's other works. Man as consisting of body and soul is a familiar notion to Plato's readers, and if the author of

Laches. contain logical

bably spurious.

of man and soul as presented in the Alcibiades contradicts the permanent teaching

the Alcibiades takes the trouble to give a demonstration of the identity between man and soul, he must have felt that this was an innovation against the general opinion. If Plato had given this demonstration himself, he could scarcely have disregarded it throughout his other works, from the Protagoras to the Laws. Therefore we are justified in excluding the first Alcibiades, as well as the second, from the list of Plato's works.

Authenticity of Euthyphro successfully defended against doubts. The doubts raised against the authenticity of the Euthyphro, chiefly by Ast, Ueberweg, Schaarschmidt, and J. Wagner, ¹⁵¹ have been sufficiently refuted by Stallbaum, Hermann, Yxem, ¹⁵² Wells, ¹⁵³ Adam, ¹⁵⁴ and Jezierski, ¹⁵⁵ so that there is no need to return to this question. All arguments against the authenticity of this and many other works can be reduced to two principal heads: 1. Plato would have written otherwise; 2. Analogies with other dialogues show an imitator's hand. Such arguments are necessarily subjective, and we can only affirm with certainty that Plato would have written otherwise, if we notice, as in the Alcibiades, some essential contradiction to well-known and constantly expressed Platonic teaching. Nothing of that kind can be said of the Euthyphro.

Logical contents of Euthy-phro.

The logical contents of this little dialogue ¹⁵⁶ correspond to what might be expected of a work written while the influence of Socrates on Plato still remained unaltered by further philosophical progress. The rule of definition of terms by general notion and specific difference is applied to a particular case: (12 D: εἰ μέρος

τὸ ὅσιον τοῦ δικαίου, δεῖ . . ἐξευρεῖν τὸ ποῖον μέρος), but without any methodic digression on logical theory such as appears in all the dialectical dialogues. Induction Induction and analogy are used frequently (as 13 A, 14 A, &c.) and the necessity of establishing permanent notions is insisted upon (11 D: ἐβουλόμην ἄν μοι τοὺς λόγους μένειν καὶ ἀκινήτως ίδρῦσθαι μᾶλλον ἡ πρὸς τῆ Δαιδάλου σοφία τὰ Ταντάλου γρήματα γενέσθαι: see also 5 D). Enumeration of examples is shown to be insufficient to give such permanence to a notion (6 D: οὐχ ἕν τι ἡ δύο τῶν πολλῶν οσίων, άλλ' ἐκεῖνο αὐτὸ τὸ εἶδος, ῷ πάντα τὰ ὅσια ὅσιά έστιν) and the characteristic mark is sought for.

and definitions, frequent use of analogy.

This characteristic mark is here named ellos, in the sense in which Thucydides used this word when he spoke of an είδος νόσου (Thucyd. 2, 50). Some authors, as for instance M. Waddington, 157 thought it possible to draw chronological inferences from the absence of the words ellos or ίδέα in many small dialogues. M. Waddington is evidently not aware of the fact that both words are anterior to Plato, and are used by Thucydides and other earlier writers in the same sense as by Plato in his early dialogues. In the Euthyphro as in the Charmides they both occur, idéa in the meaning of form, property, or characteristic mark (6 Ε: μιᾶ ἰδέα τά τε ἀνόσια ἀνόσια elvai), but not in the later meaning of a metaphysical entity. From the occurrence of these words, which are not yet used as logical terms, we cannot infer that the Euthyphro is later than any other small dialogue, such as the Apologu or Crito, from which these words are absent.

Though elbos and iδέα both occur in the Euthyphro. these words have not yet their technical meaning.

There is a greater difficulty in the circumstance that The same in the Euthyphro (6 E: $\chi \rho \omega \mu \epsilon \nu o s$ $a \dot{v} \tau \hat{\eta}$ $(\tau \hat{\eta})$ $i \delta \epsilon a$) παραδείγματι) the idea is said to be a paradeigma, as this seems at first sight to approach the later theory of eternal forms or paradeigmatic ideas. But such eternal

refers to

¹⁵⁷ C. Waddington, 'Observations sur le Mémoire de W. Lutostawski,' Compte rendu des séances et travaux de l'académie des sciences morales et politiques, vol. cxlvi. N. 7. See above, note 49.

forms are ' $\pi a \rho a \delta \epsilon i \gamma \mu a \tau a \ \epsilon \nu \tau \hat{\eta} \ \phi \dot{\nu} \sigma \epsilon \iota$ ' (Parm. 132 D = Rep. 597 B, cf. Theaet. 176 E), while here Plato only speaks of using the characteristic of holiness as a standard for distinguishing holy actions from sinful deeds. Such a use of the word $\pi a \rho \dot{a} \delta \epsilon \iota \gamma \mu a$ does not essentially differ from that of Thucydides and the early orators; it cannot be regarded as peculiar to Plato.

Qualities distinguished from causes. An important logical distinction is made in the Euthyphro between activity and quality: the quality is a result of a determinate activity, but never cause or ground of this activity (10 c: εἴ τι γίγνεται, ἤ τι πάσχει, οὐχ ὅτι γιγνόμενόν ἐστι, γίγνεται, ἀλλ' ὅτι γίγνεται, γιγνόμενόν ἐστιν· οὐδ' ὅτι πάσχον ἐστί, πάσχει, ἀλλ' ὅτι πάσχει, πάσχον ἐστίν). This is here explained by a number of analogies before it is expressed in a general form.

Date early but uncertain. These few hints of a logical character offer no means of determining the date of the *Euthyphro*. The scene of the dialogue proves that it could not have been written before the accusation of Socrates. With regard to the later limit of time we can infer nothing beyond that the *Euthyphro* precedes the *Meno* and *Gorgias* on grounds of style, 158 composition, and contents. 159

158 Stylistic observations place the Euthyphro at the beginning of Plato's literary career. It contains many peculiarities of earlier style: &σπερ used always instead of καθάπερ, τῷ ὅντι instead of ὅντως, μέντοι prevailing over τοίνυν; ἔγωγε, ἔμοιγε, δοκεῖ μοι forming 19 per cent. of all answers, περί with the genitive prevailing over all other prepositions, &c. (See table of affinity, p. 163.)

des platonischen Euthyphro, Lemgau 1830), Stallbaum, Steinhart, Zeller agree in placing the Euthyphro before the death of Socrates; Susemihl, Georgii (Platos Euthyphron übersetst von Georgii, Stuttgart 1875), Bergk, Dümmler believe the Euthyphron to be written some years later chiefly on account of holiness being here a part of justice, while in the Gorgias it is a fifth virtue besides justice. Also H. Ritter, Brandis, Michelis, Ribbing, Mistriotes, Peipers, Weygoldt, Windelband, Christ, who admit the date of the Euthyphro as uncertain, agree, however, as to the Socratic character and early origin of this work. Only Teichmüller (ii. 355) places the Euthyphro

The Apology shows, like the Euthyphro, a frequent In the use of induction and analogy (e.g. 25 Bc), and contains several repetitions of the well-known Socratic principle, that he who knows his own ignorance is wiser than those who believe themselves to know what they do not know (21 cd, 22 c, 29 A, 33 c, 41 B). This principle is carried to the extreme consequence, that all human knowledge is of little worth and that only God is wise and infallible (21 B, 23 A). Such a scepticism, bearing even upon the future life (29 A: οίδε οὐδεὶς τὸν $\theta \acute{a} \nu a \tau o \nu$. . . also 42 A), does not extend to ethical convictions (30 D: to do injustice is worse than death-30 B: virtue imports more than all besides).

Apology we find a frequent use of analogy.

The uncertainty manifested as to a future life shows that the Apology was written earlier than the Meno and Gorgias, in which as in all later dialogues Plato professes the greatest certainty on this subject. Also the style of the Apology, very similar to the style of the Euthyphro, makes it probable that both dialogues were written not later life. than within the first years after the death of Socrates, and though the Euthyphro represents an earlier scene, there is no decisive reason to place it before the Apology. 160

teristic uncertainty about future

The Crito forms the third act in the tragedy of which In the the Euthyphro and Apology represent the first scenes. We remark here a curious distinction between honest (χρηστάs) and immoral opinions (47 A: πονηράs δόξαs), which is parallel to the later constantly repeated contrast between mere opinion and knowledge. This way of distinestimating a judgment according to its moral value, with- guished. out asking for a logical standard of truth, is peculiar to the Socratic stage of Plato's logic, and shows us how

Crito honest and wicked opinions

after the Symposium and even after the Theaetetus, under the influence of his wrong theory of the stylistic criterion (see above, p. 102).

¹⁶⁰ Zeller and Ueberweg believed the Apology to be a faithful account of what Socrates said before his judges. But Riddell (see above, p. 99) and Stock (The Apology of Plato, with introduction and notes by S. G. Stock, Oxford 1887) have sufficiently demonstrated the improbability of this supposition.

Plato was led from the moral teaching of his master to his own logical investigations. When he wrote the *Crito*, he seems not yet to have arrived at his later ideal of objective knowledge: he is satisfied with an 'honest' opinion of a competent expert $(i\pi a l\omega\nu 47 D)$ whom he trusts more than the opinion of the many $(\delta \delta \xi a \tau \hat{\omega} \nu \pi o \lambda \lambda \hat{\omega} \nu 47 C)$.

Competent authorities trusted.

In agreement with such a practical standpoint, fundamental differences of opinion between men are recognised as inevitable, and here, as in the Euthyphro, are admitted to produce hatred and contempt, if they touch upon ethical subjects (Crito 49 c d., Euthyphro 7 d.). This view is very characteristic, because in the Gorgias and all later dialogues the Platonic Socrates is represented as possessing objective truth about ethical as well as about other matters, a truth which can be proved and communicated even to such enemies of philosophy as Kallikles. Here we see only competent opinion or the authority of the 'best' reason (46 B: μηδενὶ ἄλλφ πείθεσθαι ἡ τῷ λόγφ δε ἄν μοι λογιζομένφ βέλτιστος φαίνηται). This 'best' reason is not yet 'the reason' familiar to the readers of later dialogues.

absolute authority of reason not yet established.

The

Crito
probably
later than
Apology.

From these logical particulars we can only infer that the Crito, 161 forming with the preceding two dialogues a natural group, is earlier than the Meno and Gorgias. There is a great probability that the Crito is later than the Apology, because in p. 45 B Plato makes a clear allusion to his Apology. This allusion might also refer to a coincidence between the Platonic Apology and the historical defence of Socrates, but if we consider that also the style

¹⁶¹ The doubts as to the authenticity of the Crito expressed by Ast, and later by Schaarschmidt, have been sufficiently refuted by J. H. Bremi (Philologische Beiträge aus der Schweiz, Zürich 1819, vol. i. p. 131 sqq.), Georgii (Apologie und Krito übersetst von L. Georgii, Stuttgart 1883), J. Adam (Platonis Crito, with introduction, notes, and Appendix, Cambridge 1888), and many others. The relation of the Crito to the Gorgias is dealt with also in Plato's Apology of Socrates and Crito, on the basis of Cron's edition, by L. Dyer, Boston 1885.

of the Crito shows a slight advance over the style of the two preceding dialogues (see above, p. 163), we have good reason to admit that Plato himself intended this work as the supplement of the preceding.

Less evident is the chronological relation of the In the Charmides 162 to the above three dialogues. It is characteristic of the stage of logical advance which Plato had reached when he wrote this small work, that his Socrates commits a paralogism, inferring from the beauty yiedueros. of both temperance and quickness that quickness is temperate (159 d). Such logical blunders occur also in other small dialogues, and we have no reason to suppose that Plato was conscious of them. So long as the logical interest was not awakened, even a thinker like Plato might unconsciously commit logical errors. On the other hand, we notice a correct syllogism (161 A: aldos οὐκ ἀγαθόν . . . σωφροσύνη ἀγαθόν . . . οὐκ ἄρα σωφροσύνη ἃν εἴη αἰδώs) of the form Cesare, introduced by the word συλλογισάμενος (160 E), which, however, has not yet the meaning of a logical term.

The allusion made by Critias to a possible division of sciences into practical and theoretical (165 E: $\tau \hat{\eta} s$ ance of λογιστικής . . τί ἐστιν τοιοῦτον ἔργον οἶον οἰκία οἰκοδομικής), carried out later in the Gorgias, is not developed here; ἐπιστήμη and τέχνη are used as synonyms (165 E), but cognised. theoretical knowledge, independent of personal considerations, is recognised as a great advantage to mankind

Charmidesthe term συλλο-

Importtheoretical knowledge re-

162 Doubts as to the authenticity of the Charmides put forth by Ast, Socher, Suckow, Schaarschmidt, and recently by Troost (Inhalt und Echtheit der platonischen Dialoge auf Grund logischer Analyse, Berlin 1889) have been sufficiently refuted by Schleiermacher, Ochmann (Charmides Platonis num sit genuinus quaeritur, Vratislaviæ 1827), Stallbaum, H. Ritter, Hermann, Steinhart, Munk, Susemihl, Spielmann (Die Echtheit des platonischen Dialogs Charmides, Innsbruck 1875), Alberti ('Gesichtspunkte für angezweifelte Platonische Gespräche,' Philologus, 3er Suppl. Bd. p. 101, Göttingen 1878), and Georgii (Laches und Charmides, übers. von L. Georgii, Stuttgart 1882). Also Zeller, who formerly believed the Charmides to be spurious, has since defended the authenticity against Troost (Arch. f. Gesch. d. Philos. vol. iv. p. 134).

(166 D : κοινὸν ἀγαθὸν εἶναι σχεδόν τι πᾶσιν ἀνθρώποις, γίγνεσθαι καταφανὲς ἕκαστον τῶν ὄντων ὅπῃ ἔχει).

But certitude of knowledge doubted. Again, a sceptical tone is perceptible in the doubt whether certitude as to knowledge is possible (172 A: ἀγαθὸν εἴη τὸ εἰδέναι ἄ τε οἰδέν τις καὶ ἃ μὴ οἰδεν . . . οὐδαμοῦ ἐπιστήμη οὐδεμία τοιαύτη οὖσα πέφανται). Very characteristic of the Socratic stage of Plato's logic is the appreciation of the knowledge of knowledge according to a standard of usefulness (169 B: οὐκ ἀποδέχομαι . . . πρὶν ἀν ἐπισκέψωμαι, εἴτε τι ἀν ἡμᾶς ἀφελοῦ, 172 D: σκεψώμεθα, εἰ ἄρα τι καὶ ἡμᾶς ὀνήσει . . τὸ εἰδέναι ἄ τε οἰδεν καὶ ἃ μὴ οἰδεν). This would not occur in any dialogue after the Meno, but is very natural at the time when Plato had not entirely emancipated himself from the prevailing ethical preoccupations of his teacher.

General logical **auestion** about activities acting on themselves adiourned as requiring a future great thinker. Charmides is early. though the exact date unA beginning of later Platonic tendencies appears in the care with which the question, whether an activity can have itself as its object, is discussed. By many examples Plato tries to prove that most human activities have not this property, that, for instance, there is no perception of perception (167 c), no desire of a desire, no will of a willing (167 E), no love of love, no fear of fear, because each of these activities has an object different from itself, but the general question of the existence and possibility of a knowledge of knowledge is here not settled, only adjourned as a problem requiring for its solution a great thinker (169 A).

Nearly all investigators agree in placing the Charmides among Plato's early works. Many believe that it may have been written even before the death of Socrates, to which it contains not the slightest allusion. But an exact chronological determination in this case requires further stylistic research, and the attempt of Teichmüller to discover in the Charmides allusions to the Memorabilia of Xenophon has failed.

Laches belongs to

certain.

At all events the Laches 163 belongs to the same period.

¹⁶⁸ Ast, Schaarschmidt, and to a certain extent Giltbauer (Philologische Streifzige, Freiburg 1886) doubted the authenticity of the Laches, but

It is noteworthy that Plato mentions here as objects of the same knowledge truths which are conceived as independent of period. time (198 D: περί όσων έστιν έπιστήμη, οὐκ άλλη μέν είναι περί γεγονότος, είδέναι ὅπη γέγονεν, ἄλλη δὲ περὶ γιγνομένων, δπη γίγνεται . . . ἀλλ' ή αὐτή). Such truths are found more easily by a single competent man than by an incompetent majority (185 A: εἰ ἔστιν τις τεχνικὸς . . . ἐκείνω πείθεσθαι ἐνὶ ὄντι, τοὺς δ' ἄλλους ἐᾶν), because knowledge is a safer criterion than great number (184 Ε: ἐπιστήμη δεί κρίνεσθαι άλλ' οὐ πλήθει τὸ μέλλον καλώς κριθήσεσθαι).

This short acknowledgment of knowledge as superior Personal to opinion rises above the moral standard of honest opinions required in the Crito. But Plato does not yet pretend, as in later works, to possess such a knowledge. He advises his readers to seek the best teacher, without sparing money or anything else (201 A), but he offers no definitive solution of the proposed difficulties. the above small dialogues we see discussions leading to a Socratic confession of ignorance, and not to a definite doctrine. Opinions of others are criticised, but not definitely corrected.

authority of the best teacher.

The character of Socrates is similar in these works to what we know about the historical Socrates: he is represented as a friend of young men, detecting their errors, not yet as the ideal master of wisdom. Of a similar critical character is the first larger work written by Plato, the Protagoras. In this dialogue also logical questions are only incidentally touched upon, and it is evident that the author cares chiefly for ethical problems. These are Also the treated in a manner which presupposes the previous Protagoparticular inquiries given in the small dialogues, and the ras has a logical power also appears increased. The inconvertibility of general affirmative judgments is insisted upon

In the small dialogues no definitive doctrine.

polemical character.

these suspicions have been refuted by Stallbaum, Georgii, Bonitz, and Tatham (The Laches of Plato, with introduction and notes, London 1888). Also Zeller abandoned his earlier doubts as to the authenticity of the Laches.

Inconvertibility of general affirmations.

(350 c-351 B) by means of several analogies. observe that this logical lesson is put into the mouth of Protagoras, and not of Socrates, we must admit as probable, that the discovery was made outside of the The perfect knowledge vainly sought Socratic society. for in the Charmides is not yet found by Plato. He still expects progress from discussion (348 D). His certitude is increased by the acquiescence of others, and not by its own absolute infallibility, as in later times, when he condemned to death those who thought otherwise (Laws 909 A, 958 A: cf. Polit. 308 E). Still he recognises knowledge as the chief power in man, reigning over all feelings (352 c, 357 c), and settling all doubts (356 E: δηλώσασα τὸ άληθὲς ἡσυχίαν ἃν ἐποίησεν ἔχειν τὴν ψυχὴν μένουσαν ἐπὶ τῷ ἀληθεῖ ...). As one of the logicalmeans of arriving at knowledge, Plato states the principle that each notion has only one contradictory to itself (332 c : ένὶ ἐκάστφ τῶν ἐναντίων ἐν μόνον ἐστὶν ἐναντίον καλ οὐ πολλά) and exemplifies this rule by many instances. but without making any distinction between contrary and contradictory terms.

Law of contradiction prepared.

The Protagoras seems to be later than the small dialogues.

These observations seem to indicate a further stage of logical development than is seen in the small dialogues. In the Charmides the subject, though restricted to one form of virtue, was to a great extent the same as in the Protagoras, and it seems more plausible that the greater work should contain no allusion to the smaller than that Plato should have written the Charmides after the Protagoras without some allusion to the more general discussion on the same problem. The special subject of the Laches also is contained in the Protagoras, and the definition of courage (Lach. 195 A: τῶν δεινῶν καὶ θαρραλέων ἐπιστήμη), arrived at in the Laches after a long conversation, and shown by Socrates to refer not only to courage but to every virtue, is repeated in the Protagoras (360 D: ή σοφία των δεινών και μη δεινών ανδρεία έστίν), and remains unrefuted (see also Rep. 429 c).

Definitions of courage.

Some allusions to contemporaneous facts, contained in Allusions the Protagoras, seem to show that this dialogue was to known written at least seven years after the death of Socrates. Kroschel 164 and after him Teichmüller have supposed that the mention of πελταστική (350 A) as a familiar indicaexample was not probable before the introduction of this tions arm into the Athenian army by Iphikrates, between 393- confirm 391 B.C. Also Teichmüller and after him Dummler see the later in the Protagoras (347 c-350 B) allusions to Xenophon's date. Memorabilia, which appear to have been published some years after the death of Socrates. This agrees with our supposition that the Protagoras followed the above five small dialogues, and also with the observations on the style, according to which the Protagoras is intermediate between the small dialogues and the Gorgias (see above, p. 165).

events as

chrono-

logical

The Meno is generally held to be a continuation of the Protagoras. 165 Theories of the greatest importance, Meno conamounting to logical discoveries, are for the first time expressed in the Meno, which in size exceeds only by a very little the limits of a small dialogue, and amounts to less than two-thirds of the volume of the Protagoras. Logical exercise, so often recommended in the dialectical works, is here first introduced as a methodical way of progressing on the path of truth (75 A: in order to enable Meno to find the definition of virtue, Socrates proposes the definition of form: "να καλ γένηταί σοι μελέτη). The aim of logical definition is indicated as the determination of the substance (72 B: οὐσία) of things, that

tinues the question raised in the Protagoras.

164 J. S. Kroschel, 'Studien zu Platons Protagoras' (Jahrbücher für classische Philologie, vol. 87, p. 825, 1863), also in his review of Cron's edition of the Protagoras (Zeitschrift für das Gymnasialwesen, vol. xx., for 1866), and in his edition of this dialogue (Gotha 1865, as 34 ed. of Stallbaum).

166 Nearly all investigators agree that the Meno is later than the Protagoras: Tennemann, Schleiermacher, Hermann, Susemihl, Ribbing, Steinhart. Zeller, Ueberweg, Pfleiderer, Natorp, Siebeck, Gomperz, Ritter, J. Bartunek (Ueber die Aufeinanderfolge der Dialoge Protagoras, Gorgias und Menon, Progr. Rzeszów 1897) &c.; only Stallbaum, Schöne, and F. Horn advocated the priority of the Meno on quite insufficient grounds; R. Hirzel (Rheinisches Museum, vol. 42, p. 249) sees in the Meno allusions to Polykrates' κατηγορία Σωκράτους.

Unity of species.

which brings unity among the variety of external appearances (72 C: αὐτὸ τοῦτο ὧ οὐδὲν διαφέρουσι, ἀλλὰ ταὐτόν εἰσιν ἄπασαι). This unity is called εἶδος, not yet the later Platonic idea, but already a distinct logical term, corresponding to species (72 C: ἕν γέ τι εἶδος ταὐτὸν ἄπασαι ἔχουσιν, δι' δ εἶσὶν ἀρεταί). The unity of species is the true essence of the things which it embodies (100 B: αὐτὸ καθ' αὐτὸ τί ποτ' ἔστιν ἀρετή).

Dialectical requirements. Having thus established the aim of research, Plato proceeds to give some rules as to the method. Here appear for the first time the 'dialectical' requirements. Xenophon had once applied (Memor. iv. 5, 12: ἄνδρας διαλεκτικωτάτους) the word 'dialectical' in the sense of 'best able to conduct conversation,' but Plato, converting it into a logical term, requires of all who wish to discuss dialectically that they should base their reasoning on recognised notions or premisses (75 D: ἔστι δὲ ἴσως τὸ διαλεκτικώτερου μὴ μόνου τὰληθῆ ἀποκρίνεσθαι, ἀλλὰ καὶ δι' ἐκείνων ὧν ἃν προσομολογῆ εἰδέναι ὁ ἐρόμενος).

Hypothetical method of investigation. As a method of verifying doubtful suppositions, Plato proposes to look for the consequences following from each hypothesis. This method he describes as hypothetical argument (86 Ε: ἐξ ὑποθέσεως σκοπεῖσθαι . . . ὧσπερ οἱ γεωμέτραι), and transfers it from geometry to philosophical inquiry. He applies it successfully to the problem which he could not yet resolve in the *Protagoras*, and finds that virtue, so long as it is not taught, but merely practised according to common traditional experience, appears not to be, as was supposed in *Charmides*, *Laches*, and *Protagoras*, a kind of knowledge.

Opposition of general and particular judg-ments.

Another sign of the awakened logical interest is the careful distinction between particular and general affirmation (73 E, 89 A). Such progress in respect of formal reasoning corresponds to an equally remarkable development of some fundamental logical doctrines about which neither in the *Protagoras* nor in any of the small dialogues had Plato expressed any opinion. The theory of innate

ideas is not only introduced with a striking audacity, Innate but founded on so general a metaphysical axiom as the ideas. unity of nature (81 D: ἄτε γὰρ τῆς φύσεως ἀπάσης συγγενούς ούσης, καὶ μεμαθηκυίας της ψυχης απαντα, οὐδὲν κωλύει ἐν μόνον ἀναμνησθέντα . . . τάλλα πάντα . . . ἀνευρείν).

The metaphysical certainty of a priori knowledge, A priori proclaimed by Plato in the Meno, is a new principle in knowledge the light of which the old Socratic irony and ignorance are disappearing. Still the author condescends to give an experimental and inductive proof of his assumption, after the caution that such a proof is not easy (82 A). The choice of the experiment and the manner in which it is executed show an educational mastery far greater than that visible in the small dialogues (82 B-85 c).

made probable by experiment.

All doubts about the possibility and reality of infallible Knowscience have been removed: the Platonic Socrates boldly ledge proasserts his absolute certainty of the existence of a science far above right opinion (98 Β: ὅτι δέ ἐστίν τι ἀλλοῖον ὀρθή δόξα καὶ ἐπιστήμη, οὐ πάνυ μοι δοκῶ τοῦτο εἰκάζειν, trom άλλ' είπερ τι άλλο φαίην αν είδεναι, όλίγα δ' αν φαίην, εν δ' οὖν opinions καὶ τοῦτο ἐκείνων θείην ἀν ὧν ο ίδα), and that this science because it may be awakened in everybody by means of skilful inter- is founded rogations (86 A: ἀληθεῖς δόξαι ἐρωτήσει ἐπεγερθεῖσαι ἐπιστημαι γίγνονται). The difference between right belief grounds. and scientific knowledge consists in the co-ordination and causal relation peculiar to true knowledge (98 A: ἀληθεῖς δόξαι . . . οὐ πολλοῦ ἄξιαί εἰσιν, ἔως ἄν τις αὐτὰς δήση αίτίας λογισμώ . . . ἐπειδὰν δὲ δεθώσιν, πρώτον μὲν ἐπιστῆμαι γίγνονται, ἐπειτα μόνιμοι καὶ διὰ ταῦτα . . . διαφέρει δεσμώ ἐπιστήμη ὀρθης δόξης). Science is therefore more valuable than mere belief, even if it be right belief. Armed with his new weapon, Plato enters upon its application to the ethical field, and introduces the Applicaimmortality of the soul first as a true and beautiful tale tion to imof priests and poets (81 A), which he then confirms by a mortality. reflection on the nature of human thought (86 Β: οὐκοῦν

claimed as essentially different

εί ἀεὶ ἡ ἀλήθεια ἡμῖν τῶν ὄντων ἐστὶν ἐν τῆ ψυχῆ, ἀθάνατος $\hat{a}\nu \hat{\eta} \psi \nu \chi \hat{\eta} \epsilon i \eta$).

Date of the Meno after 395 в.с.

This far-reaching logical importance of the Meno, noticed already by Guggenheim 166 and Oldenberg, 167 tells against those who like Socher and Stallbaum believe that the Meno could have been written before the death of Socrates. The allusion to the bribery of Ismenias, indicated by Boeckh and Schleiermacher, shows that the Meno is later than 395 B.C. Less evident is another allusion to Polykrates, maintained by Hirzel and Dümmler, who place the Meno after the Symposium, an order which appears impossible, if we take into account the stylistic tests (see above, p. 166). What may be safely affirmed is that the Meno is later than the Protagoras and all smaller dialogues.

The Euthudemus directed against unknown enemies.

The logical interest awakened in the Meno bursts out only occasionally, but with great intensity in the Euthydemus, 168 which has all the appearance of a polemical work written for a certain practical purpose, and against enemies whom it is not quite easy for us to identify. Plato is so proud of his acquired certainty of knowledge that he would not give it up even for immortality, if not accompanied by knowledge how to use it (289 B). While in the Protagoras the word philosophy was still used in sophy and the meaning of love of wisdom (335 D, 342 D), here we see it defined as acquisition of knowledge (288 D: φιλοσοφία κτήσιε ἐπιστήμης), and the dialectician, who had received his first rules in the Meno, becomes the highest judge of every particular knowledge (290 c).

Philodialectic

¹⁶⁶ M. Guggenheim, Die Lehre vom apriorischen Wissen in ihrer Bedeutung für die Entwickelung der Ethik und Erkenntnisstheorie in der Sokratisch-Platonischen Philosophie, Berlin 1885.

les Doubts as to the authenticity of the Euthydemus, emitted by Ast and later by Schaarschmidt, have been sufficiently refuted by A. Polzer (Ueber die Echtheit des Euthydemos, Olmütz 1874) and Bonitz (Platonische Studien, Berlin 1886). Bonitz gives also an elaborate classification of more than twenty sophisms contained in the Euthydemus.

These dialecticians, thus placed so high above the defended mathematicians and all other inquirers, are evidently and placed Plato himself and his school. For the writer of the Euthydemus is clearly a teacher, though probably not yet the head of the Academy. Philosophy is the subject of his teaching, and he passionately defends his science against those who call philosophy a worthless and vain occupation (304 E).

sciences.

To the right belief, explained in the Meno, Plato adds Many in the Euthydemus his explanation of error and wrong sophisms belief, whose existence is proved against the Sophists by the hypothetical method taught in the Meno (Euthyd. 284 A, 287 E). Plato gives an interesting collection of current sophisms resulting from the use of the same word in two different meanings, the misinterpretation of predication, the omission of limiting determinations, and the double meaning of phrases according to their grammatical construction.

refuted and their origin explained.

The date of the Euthydemus can be approximately determined by its admission of the possibility of teaching virtue (as in the Republic and Laws), whence we conclude that it was written after the Protagoras and Meno, in which the same question is discussed. Those who, like Tennemann, Stallbaum, Steinhart, C. Ritter, believe the Euthydemus to have been written before the death of be very Socrates cannot account for the logical enthusiasm which early. is here manifested and is absent from all earlier dialogues. Those who, like Bergk, Siebeck, and Weygoldt, place the Euthydemus after the Symposium are not aware of the great difference in style between the Euthydemus and all dialogues later than the Cratylus and Symposium (see above, p. 166).

Date of the Euthydemus has been supposed by some writers to

There is no contradiction from the standpoint either of logical or of stylistic development in admitting the close relation between the Euthydemus and Isocrates' discourse against the Sophists. This relation, first

Allusion to Isocrates' discourse against

the Sophists is a safe indication, and this confirms inferences

noticed by Spengel, 169 and Thompson, 170 has been since investigated by Teichmüller, Sudhaus, 171 Dümmler, and recognised by Zeller and Susemihl, without any noteworthy opposition. According to these investigations, the Euthydemus must have been published not before 390 and probably not much later. Another allusion to Lysias, although supported with great ingenuity by Teichmüller, from style. is not quite so evident, and also the references to Antisthenes, alleged by Teichmüller, Urban, 172 and Dümmler, are possible, but not certain. If we admit that Plato wrote the Euthydemus 173 about 390 B.C., this agrees very well with the general character of the dialogue, which directs the most acute polemic against wrong education, thus seeming to indicate that the author had already acquired some educational experience, and gathered around him a number of pupils, preparing the foundation of that philosophical school which achieved such an unparalleled importance in the history of human thought.

Gorgias represents the transition from the Socratic

This educational character reaches a still higher level in the Gorgias, which represents the transition from the Socratic to the peculiar Platonic philosophy. ethical character the Gorgias is still Socratic, but the method of argumentation and the apodictic certainty with

¹⁷⁸ Some authors inferred from the use of *apeor: Euthyd. 301 A that Plato when he wrote the Euthydemus had already produced his theory of ideas. But this is by no means probable, because *apeivac is used in exactly the same manner in some of the small dialogues, as Charm. 159 A and Lys. 217 p, like mapaylyvesta: in the Laches 189 E. This use does not correspond to the terminology of ideas. Instead of πάρεστι κάλλος τι (Euthyd. 301 A) Plato would have said later πάρεστι το κάλλος (αὐτο καθ' αδτό). Generally παρείναι is very little used by Plato in connection with ideas.

which ethical principles are proclaimed (509 A: ovosis olos stage to τ' ἐστίν ἄλλως λέγων μη οὐ καταγέλαστος είναι) belong to original Plato, are his own creation, and are manifested constantly in all his later works. The literary skill displayed in the Gorgias reaches a higher perfection than in the small dialogues, and even than in the Protagoras, Meno, or Euthydemus. Plato has now arrived at a mastery of form, which approaches to the highest beauty attained by human language, and has been exceeded perhaps only by Plato himself in the Phaedo, the Phaedrus, and parts of the Symposium, the Republic, and the Theaetetus.

Platonic sophy.

The teaching of those dialecticians, who were indicated Philoin the Euthydemus as treasurers of knowledge, is now sophyperpersonified and attributed to 'Philosophy.' This Philosophy is loved more than all human beings, and is credited with eternal truths, which never change (482 A: ή φιλοσοφία ἀεὶ τῶν αὐτῶν ἐστὶ λόγων). The power of tality. these truths is based on our own consciousness, nor can any man contradict them without contradicting himself (482 Β: ἡ φιλοσοφίαν ἐξέλεγξον . . . ἡ οὖ σοι ὁμολογήσει Καλλικλής, ὁ Καλλίκλεις, ἀλλὰ διαφωνήσει ἐν ἄπαντι τῶ $\beta(\omega)$. And to all faithful followers of this his Queen, Plato promises after death a happy life, apart from other human beings (526 c). In this he still betrays a juvenile egoism, which was abandoned later, when he bade the philosophers descend like gods among mortals to teach them a better life.

sonified. Philosopher's immor-

The difference between right belief and scientific Difference knowledge, found in the Meno, is here applied to the art of between persuasion, and leads to the distinction of two kinds of belief and rhetoric, one based on knowledge, the other on faith (454 Ε: δύο είδη θώμεν πειθούς, τὸ μεν πίστιν παρεχόμενον άνευ τοῦ εἰδέναι, τὸ δ' ἐπιστήμην): knowledge alone is infallible (454 D: ἐπιστήμη οὐδαμῶς ἐστὶν ψευδής), while belief may be true or false. In full accordance with this increasing separation between science and opinion, Plato distinguishes more clearly than in the Charmides between

knowledge recognised theoretical and applied or practical sciences (450 c-451 d), and he insists on the importance of the division of concepts (500 d: βέλτιστόν ἐστιν . . . διαιρεῖσθαι, διελομένους δὲ και ὁμολογήσαντας ἀλλήλοις . . . σκέψασθαι, τί τε διαφέρετον ἀλλήλοιν).

Logical terms.

The reasoning proceeds on granted premisses, according to the rule given in the Meno, and the logical connection is carefully shown by means of logical terms (498 E: συλλόγισαι, τί ήμιν συμβαίνει έκ των ωμολογημένων). Inevitable repetitions are excused by the logical aim (499 Α: καὶ δὶς γάρ τοι καὶ τρίς φασιν καλὸν είναι τὰ καλὰ λέγειν τε καὶ ἐπισκοπεῖσθαι, cf. 508 D). This gives the impression of an author who is used to personal teaching, and has already found the truths he wishes to convey to his hearers, but professes to seek them again in company with his pupils. What in the Apology (30 D) and Crito (49 AC) has been expressed as a personal belief, that one should by no means do wrong, is here affirmed as a wellfounded scientific truth (509 A: ταῦτα . . . ἡμῖν οὕτω φανέντα κατέχεται καὶ δέδεται σιδηροίς καὶ ἀδαμαντίνοις λόγοις), and is so far extended as to imply even the necessity of punishment if one has done wrong (482 B, The aim of human life is not, as it seemed to be in the Protagoras, pleasure but 'the good' (513 D: δύ' έφαμεν είναι τὰς παρασκευὰς ἐπὶ τὸ ἔκαστον θεραπεύειν, . . . μίαν μεν προς ήδον ην όμιλειν, την επέραν δε προς το $\beta \dot{\epsilon} \lambda \tau \iota \sigma \tau o \nu$). The politician's duty is to make better the people whom he leads.

To do

This
shows
independence of
tradition

In the *Protagoras* and *Meno* Plato still maintained the popular belief that Pericles and Themistocles were great and wise men. He only complained that they were unable to impart their greatness and wisdom to their children or others. But now, from the height of the newly founded philosophy, Plato dares to say that these idols of the Athenians were bad politicians and corrupters of the people (515 E). This bold contempt of the men who had generally been esteemed greatest among the

citizens of Athens shows how rapidly the breach is and public widening for Plato between vulgar common sense and opinion. the teachings of philosophy. He has risen from Socratic ignorance and irony to that full independence of tradition and public opinion which in all ages characterises a great philosopher.

Another indication of the later date of the Gorgias is Gorgias the hatred of tyranny (525 D) here expressed and henceforth maintained by Plato throughout his life. Stylistic inquiry places this dialogue after all the above-mentioned works, and between the Euthydemus and the Cratylus (see above, as results p. 167). If we admit with Teichmüller that the Pro- from its tagoras and Euthydemus were written between 393- contents 390 B.C., we are not obliged to accept his supposition and style. that the Gorgias is fifteen years later. Teichmüller (ii. 357) as well as Sudhaus 171 place the Gorgias after Isocrates' discourse to Nicocles, which is supposed to have been written 376 B.C. But the allusions to this discourse supposed to be contained in the Gorgias are not evident. while Dümmler, who also specially investigated Plato's relation to Isocrates, assigns to the Gorgias a much earlier date. The most certain conclusions as to the date of the This Gorgias that can be drawn from the contents have been indicated by Natorp 174: the Gorgias is probably later than the Protagoras, Meno, and all above-mentioned small dialogues. This is also the result reached by Horn and Horn. in his comparison of the ethical theories of these works. The Gorgias 175 closes the Socratic stage of Plato's

the latest of all Socratic dialogues,

confirms the conclusions of Natorp

174 P. Natorp, 'Ueber Grundansicht und Entstehungszeit von Platos Gorgias' (Archiv für Geschichte der Philosophie, vol. ii. p. 394, Berlin

175 The Gorgias is one of the few works of Plato which has escaped the searching criticism of those who have doubted the authenticity of many other dialogues. Voluminous and instructive commentaries on the Gorgias have been published by Findeisen (Platonis Gorgias, Gothae 1796, 624 pp.), D. Coray (Εενοφώντος 'Απομνημονεύματα καὶ Πλάτωνος Γόργιας ἐκδίδοντος καὶ διορθούντος 'Αδαμαντίου Κοραή, έν Παρισίοις 1825), Ast (Annotationes in Platonis Opera, tom. ii. Lipsiae 1832), Woolsey (The Gorgias of Plato, Boston 1842), Cron (Beiträge zur Erklärung des Platonischen Gorgias, Leipzig philosophy, and leads from the ethical problems which occupied him in the first years after the death of his master to the logical and metaphysical inquiries which filled the greatest part of his manhood.

Plato's progress from moral problems to logical investigations. His discovery of scientific certainty.

Looking back over the above survey of Plato's first steps in logic, we see that he started from ethical problems, agitated by his teacher, and that his first attempts to find a definition of particular virtues and of virtue generally were made with moral purposes. In order to be temperate it seems to be indispensable to know what temperance is, and where is the limit separating this virtue from intemperance. Among such inquiries on particular virtues Plato became interested in the more general problem of a definition of virtue. This he began to seek, and after some vacillation recognised the identity of virtue and knowledge. But he was still unable to attain certainty of knowledge; only after years of educational practice he found that such certainty is possible, and not to be sought for in the assent of any majority, nor in tradition, nor in idle discussion, but in the inward power of the soul which sees the truth with absolute certainty. To trace the origin of this power, felt by him when he imparted his moral convictions to his pupils, he recurred to the hypothesis of a previous existence of the soul, and deduced also the soul's immortality.

Rules for dialectical discussion. Infallible knowledge attained. We see the influence of his activity as a teacher in the rules for dialectic discussion, consisting in starting from recognised premisses, in dividing and distinguishing notions, in following up the consequences of each hypothesis, and avoiding unjustifiable generalisation. By these means Plato reached a degree of certitude not experienced before. He created an ideal of infallible knowledge, far above traditional opinions, and he distinguished this scientific knowledge from common belief by his ability to show a reason for each assertion. The methodic connection of

1870, G. Lodge (Gorgias, edited on the basis of the Deuschle Cron's edition, Boston 1891, 308 pp.), and many others.

thought gave to his conclusions a permanence and consistency which unscientific opinion never reaches.

The new power of philosophy, acquired by logical New exercises undertaken with ethical purposes, reacted first on the moral problems from which Plato started. applied his logical method first to the great questions which had been unsuccessfully discussed in his earlier writings, and he produced a consistent theory of virtue and of the aims of life in the Gorgias. But the logical to other progress achieved will not be limited in its effect to the subjects. subject for which it has been devised. We see already in the Meno, in the Euthydemus, and in the Gorgias, that Plato begins to feel an interest in logical method independently of its applications, and this logical interest, once awakened, will lead him to special logical investigations, and to further development of methods in order to acquire and communicate to others an infallible knowledge.

method first applied to the theory of virtue led then

An almost fanatical enthusiasm and love of absolute Reality of science explains certain exaggerations: the new knowledge referred only to very few principles, but Plato is as proud of it as if he had already extended it to all departments of Being. He obtained a glimpse of a world different from the world in which he lived, and he had the audacity to believe more in the reality of this new world of his thoughts than in all other authorities. Thus he progressed out of the Socratic stage to his own philosophy, and created the theory of ideas, which has been so often identified with Platonism.

the world of thought prepared in the Gorgias.

We cannot agree with Zeller who sees vestiges of this Buttheory theory of ideas already in the Meno, Euthydemus, and of ideas Gorgias. Here we have only the germ from which the theory of ideas was afterwards developed. This germ is the consciousness of infallible knowledge arrived at when Plato wrote the Meno, becoming a special science in the Euthydemus, and in the Gorgias entrusted with the of intuidirection of human life. This consciousness was in the tive

not yet expressed. Its germ sciousness

218 ORIGIN AND GROWTH OF PLATO'S LOGIC

infallible knowledge. beginning purely personal and based on experience in teaching. Plato enjoyed it as a new sense, a feeling of higher life, and he did not yet undertake to explain it fully. The absolute certainty was reached in his own mind, and referred really only to a few ethical truths; he had imparted it to some of his pupils, and he generalised the faculty of absolute knowledge, postulating such knowledge for all departments of being. The complete theoretical explanation of the possibility of such knowledge was not yet given—scarcely asked for. But the consciousness of absolute knowledge, created in the soul of Plato, was transmitted from generation to generation, and since his time has never deserted European philosophy.

CHAPTER V

ORIGIN OF THE THEORY OF IDEAS

WHEN Plato had discovered in his own consciousness Certainty the existence of an infallible knowledge (a priori) and applied this knowledge to the ethical problems which were the chief subject of his teacher's philosophy, it was natural for him to seek an explanation of the nature of knowledge itself. A priority of knowledge with its fact then accompanying certainty appeared to him first as a psycho-investilogical fact, a feeling concerning certain thoughts. This gated as feeling from a psychological point of view might still a logical The logical standpoint was not yet be an illusion. reached, or at least is not known to have been reached by anybody before Plato. The fact of an a priori knowledge proclaimed by Plato in the Meno was for him a psychological fact, the difference between the state of mind of one who knows and knows reasons of his knowledge, and that of one who believes, and does not care to find out why he believes. The dialectician, whom Plato had described in the Euthydemus as the master of every knowledge, distinguished his knowledge from other people's opinions by the circumstance, that he had reasons to quote for his judgments. The doctrine of an absolute morality was presented in the Gorgias as a knowledge above and beyond all changes of opinion; but Plato had not yet inquired into the ultimate foundations of the certainty which he experienced and imparted to his pupils. The antenatal existence mentioned in the Meno was rather an inference from the fact of a priori knowledge than the explanation of it.

of knowledge first accepted 88 8 DSVchological Not all the steps of the inquiry recorded. This explanation was the next task undertaken by Plato after giving his definitive solution of the moral problem in the *Gorgias*. We cannot expect Plato to record for us every step of his new investigations. We must ourselves supply the connection between one work and another, because the works themselves do not exhibit a continuity of evolution. The dialogues were not intended as a diary of investigations, but as an artistic embodiment of certain conclusions with an ideal indication of a method by which they might have been reached, not necessarily coinciding with the actual steps through which the author had arrived at them.

Three points of view appearing in the Cratylus, Symposium, Phaedo.

Such artistic reminiscences of a long inquiry were the Protagoras, Meno, Euthydemus, and Gorgias; they were never connected by Plato into one whole, nor are they a progressive account of the development of the author's theories, but represent only occasional manifestations of his original thoughts. The next movement in advance of these ethical dialogues is visible in the Cratylus and Symposium, which approach the solution of the logical problem of a priori knowledge from two different sides, which may be described as the linguistic and the esthetical. A third note is struck in the Phaedo, and it is really only in the Phaedo that the theory of ideas takes a definitive shape, and is based on metaphysical considerations. All these three dialogues are undoubtedly later than the ethical series, because their style has many more characteristics peculiar to the latest group (see above, pp. 168-169).

I. The Cratylus.

(Relative affinity to the latest group, measured on the *Laws* as unity, = 0·16; see above, p. 168.)

Cratylus The Cratylus, which recalls the Euthydemus by the presents humour displayed in it, offers many difficulties to the difficulties interpreter, because it is not quite easy to distinguish

what is meant seriously from what is a parody of con- of intertemporary linguistics. Cratylus, who is here represented pretation. as debating with Socrates, might be the same about whom Aristotle 176 says that he was a follower of Heraclitus and a teacher of Plato. But while Aristotle represents Plato as faithful in an essential point to the doctrine of this his first teacher, we see in the present dialogue how he frees himself from a prejudice maintained by Cratylus, according to which philology took the place of philosophy, and the truth about being was to be sought in etymology.

It is very characteristic of the dialogue which makes Moral the starting point of Plato's logic, that in order to prove judgments that things are not necessarily as they appear, that there is an existence independent of appearance, and a certainty not liable to doubt, Plato uses an ethical example, and certainty. quotes as one of such certainties the existence of bad and good men (386 B). Thus the existence of things is treated as independent of the words we use to define them, and they are viewed as having their own permanence of substance (386 A: ἔχειν αὐτὰ αὐτῶν τινὰ βεβαιότητα τῆς οὐσίας-423 D: οὐσία δοκεί είναι ἐκάστφ, ὥσπερ καὶ χρώμα . . . πρώτον αὐτῷ τῷ χρώματι καὶ τἢ φωνἢ ἔστιν οὐσία τις ἐκατέρφ αὐτῶν, καὶ τοῖς ἄλλοις πᾶσιν ὅσα ἡξίωται ταύτης της προσρήσεως τοῦ είναι). Neither is Protagoras Protagoright in affirming that everything is as it appears to ras and everybody (386 c), nor Euthydemus in believing that everything is for everybody the same always (386 D), for in either case no room would be left for the distinction between good and bad, and this distinction Plato since writing reference the Gorgias looked upon as incontestable. The opinion to the here ascribed to Euthydemus is found in the dialogue of dialogue

taken as standard

Euthydemus condemned: with a

¹⁷⁶ Aristotle in the Metaphysics (987 a 32) quotes Cratylus as Plato's teacher, and says that he was a follower of Heraclitus. Proclus in his commentary on the Cratylus of Plato (ed. J. F. Boissonade, p. 4) identifies with this Heraclitean Cratylus the Cratylus of Plato's dialogue.

Euthydemus. this name, and if we compare the passages, the *Cratylus* seems to refer to the *Euthydemus*:

Euthyd. 294 Ε: πότερον πάντα νῦν μόνον ἐπίστασθον ἢ καὶ ἀεί;—καὶ ἀεί—answers Euthyd. and he says: 295 Δ: ἐπιδείξω καὶ σὲ ταῦτα τὰ θαυμαστὰ ἔχοντα. After a sophistical argument he concludes with saying to Socrates: 296 D: ἀεὶ γὰρ ὡμολόγηκας ἐπίστασθαι καὶ ἄμα πάντα. This is then proved h

Cratyl. 386 D: οὐδὲ καθ' Εὐθύδημόν γε οἶμαι σοὶ δοκεῖ πᾶσι πάντα όμοίως εἶναι ἄμα καὶ ἀεί· οὐδὲ γὰρ ἄν οὕτως εἶεν οἱ μὲν χρηστοί, οἱ δὲ πονηροί, εἰ όμοίως ἄπασι καὶ ἀεὶ ἀρετή τε καὶ κακία εἵη.

 $d\mu a \pi \acute{a} \nu \tau a$. This is then proved by Socrates to be wrong 297 a by the example of the evident falsehood of a judgment such as 'good men are unjust.'

Substance
permanent,
while appearances
are
changing.
Permanence of
notions a
condition
of know
ledge.

What this substance or nature of things and even of actions (387 D) is, Plato does not yet fully explain. His first step is only to ascertain that it must be permanent, while appearance is changing. The permanence of the substance of things results from the possibility of knowledge, which, since it has been established in the Meno, is no more liable to doubt, and is here accepted as a basis of reasoning. If things never remained the same, there would be nothing in them whereof Being might be predicated (439 E: $\pi \hat{\omega} s$ $o \hat{v} \hat{v} \hat{a} \nu \epsilon \hat{i} \eta \tau \hat{i} \epsilon \kappa \epsilon \hat{i} \nu o$, δ μηδέποτε ώσαύτως έχει; . . . εἰ δὲ ἀεὶ ώσαύτως έχει καὶ τὸ αὐτό ἐστι, πῶς ἄν τοῦτό γε μεταβάλλοι ἡ κινοῖτο μηδὲν ἐξιστάμενον τῆs αὐτοῦ ἰδέαs;). When a thing changes it becomes another, and no longer corresponds to the idea we first conceived of it. In such continuous changes knowledge becomes impossible, because knowledge refers to a determinate being, and if that being becomes another, then our knowledge can no more refer to it, since knowledge cannot know an indeterminate object (440 A: γνώσις δή που οὐδεμία γιγνώσκει δ γιγνώσκει μηδαμώς έχου). Knowledge itself, if it be knowledge, must remain unaltered and without change, because if it changes and no longer corresponds to the notion of knowledge, then it ceases to be knowledge at all (440 A B: ἀλλ' οὐδὲ γνωσιν έλναι φάναι εἰκός, ελ μεταπίπτει πάντα χρήματα

καὶ μηδεν μένει . . . ἐκ τούτου τοῦ λόγου οὔτε τὸ γνωσόμενον οὔτε τὸ γνωσθησόμενον αν εἴη). This reasoning is of fundamental importance for Plato's logic, and for the origin of logic generally. It returns many times in later writings: the existence of a knowledge that is different from mere opinion is an axiom and the foundation of science. But knowledge cannot deal with ever-changing Know-The aim is to discover fixity in its objects, and ledge canmatter. these, the notions of our mind, if grasped by real knowledge, cannot undergo change. If they change, then they were not at first obtained by knowledge but by a wrong opinion.

not deal with everchanging matter.

It is inconceivable how Schaarschmidt (pp. 262-263) Material could believe that the objects of knowledge referred to so frequently (as τὰ ὄντα) in the Cratylus were material things. Plato says clearly that the substance of things, as being invariable, is different from material appearances, and he quotes as illustrations of such substances the knowing subject, the known object, the beautiful, the good (440 B: εί δὲ ἔστι μὲν ἀεὶ τὸ γιγνῶσκον, ἔστι δὲ knowing τὸ γιγνωσκόμενον, ἔστι δὲ τὸ καλόν, ἔστι δὲ τὸ subject ἀγαθόν, ἔστι δὲ ὲν ἕκαστον τῶν ὄντων, οὔ μοι φαίνεται ταῦτα όμοια όντα, α νῦν ἡμεῖς λέγομεν, ροή οὐδεν οὐδὲ φορά). He expressly warns his disciples that the beautiful is not the same as a beautiful face, since the beautiful face can change, while the beautiful remains always the same (439 D: αὐτὸ τὸ καλὸν τοιοῦτον ἀεί ἐστιν οδόν ἐστιν). If it did not remain the same, we could not even name it or think of it.

things are not true Being. Only general notions or the really.

The negative determination of the substance as Substance different from particular things leaves open the inquiry deterwhether this substance has an ideal or a real existence. The beautiful might be independent of our own individual gatively. reason, and might still exist only in some personal reason, being a necessary form of thought, as has been admitted Or the beautiful might have a separate by Kant. existence as a power independent of any personal

mined ne-

being, the origin and cause not only of all beautiful particular things, but also of our personal notion of the beautiful.

No trace of substantial ideas in the Cratylus.

If we look at all the places in the Cratylus where the existence of an idea is postulated, we find in none of them any hint as to whether Plato in writing this dialogue was aware of the above alternative and whether he had already made a choice between the two possible answers to the question in which manner the substance of things exists. In every passage where he uses the words είδος, ίδέα or similar expressions (as 389 D: αὐτὸ έκεινο δ έστιν, 389 A: τοιοῦτόν τι δ πέφυκε) we can render them by 'notion,' 'form,' 'idea,' and we need not have recourse to the supposition that Plato had already imagined a world of self-existing ideas, as in his later teaching.

Further investigation invited.

He is very cautious in taking his first steps in logic, and he confesses that the definitive solution of these problems is very difficult (440 c), but he exhorts his readers to investigate courageously and well, and not to desist from that investigation (440 D). He seems to promise further exposition, because Socrates and Cratvlus at the end of the dialogue mutually advise each other to consider the matter. This is in perfect accordance with the position of this dialogue as introductory to Plato's special logical studies.

Allusions to earlier exposition uncertain, and could not refer to Phaedrus or Theaetetus. words

The necessity of a substance of things, as the true object of knowledge, is here alluded to as dreamt of many times (439 c: πολλάκις ονειρώττω). Some interpreters have inferred that this implies earlier expositions of the same problem, and have accordingly placed the Cratulus after other dialogues, as for instance Pfleiderer 177 held it to be 'indubitable' that Phaedrus and even Theaetetus preceded the Cratylus. Use of the But we must be cautious in such inferences, because Plato did not look upon his works as a continuous series

¹⁷⁷ E. Pfleiderer, Socrates und Plato, Tübingen 1896, p. 318 sqq.

of handbooks, in which each presupposes all that precede. «180s and An allusion to frequent discussions on a particular 18 éa not subject may refer much more probably to Plato's technical. oral teaching than to his previous works. The use of οὐσία in the meaning of the true substance of a thing as opposed to its appearance is not found in the ethical dialogues preceding the Cratylus, and appears here for the first time. 178 It cannot easily be taken in the later meaning of a transcendental idea, because the only marks of substance here insisted upon are its permanence, and its difference from appearance and opinion. Both can be predicated of concepts of our mind, and when Plato began to understand something else by an idea, he said so expressly in quite different terms. If anybody from the mention of the form of a shuttle (389 B: είδος κερκίδος) infers that Plato in the Cratulus admitted ideas of manufactured articles, then of course he would find the Platonic theory of ideas already in Thucydides. But in the light of an impartial interpretation, the theory of ideas is only prepared in the Cratulus, not yet formulated. 179

The power of the dialectician, assumed in the The dia-Euthydemus, is again asserted in the Cratylus. dialectician, however, is here defined as 'he who knows directs the how to ask and to answer questions' (390 c: ὁ ἐρωτᾶν ἐπιστάμενος καὶ ἀποκρίνεσθαι); this definition is not given here as something new, but as well known and

The lectician creation of new words.

178 Peipers (Ontologia Platonica, p. 67) quotes some passages from earlier dialogues, where according to him obola refers to ideas, but on consideration, in all these passages another meaning is obvious. Euthyph. 11 A οὐσία δσίου = definition of holiness (Jowett: essence); Charm. 168 D οὐσία = nature (Jowett) or quality; Protag. 349 Β οὐσία (ὀνέματος) καλ πραγμα = object and thing (Jowett: 'essence and thing'); Meno 72 B οὐσία μελίττης = definition of a bee (Jowett: nature of a bee); Gorg. 472 B ἐκβάλλειν ἐκ τῆs οὐσίαs (Jowett : inheritance). In none of these passages is obola opposed to appearance, as in the Cratylus and in many later works.

178 That the Cratylus is introductory to the theory of ideas has been also recognised by Susemihl (see note 54), who observed that the words elfor and loca have in all passages of the Cratylus whenever they occur the meaning of 'species,' 'kind,' 'form,' but not the later meaning of Platonic

ideas (Genetische Entwickelung, vol. i. p. 161).

recognised, though it had not been given in any earlier work of Plato. In the Euthydemus, the only earlier dialogue where the dialectician is mentioned, the term was also assumed as known, and it may have been used by Socrates, as it occurs in Xenophon's Memorabilia. But here the privilege of the dialectician to judge every kind of knowledge is extended also to the art of creating words. The maker of words has to recognise as his master the dialectician (390 D: νομοθέτου ἔργονονομα, ἐπιστάτην ἔχοντος διαλεκτικὸν ἄνδρα), and here Plato is clearly conscious of his dialectical superiority over contemporary philologers, and, as he expressly states, over the sophists (391 c) and poets (391 D-393 B).

Related to this is the demand that the first elements

First elements of everything must be first explained. Natural divisions of things.

of everything must be explained unless the whole is to remain unexplained; which is here applied to the origin of language (426 A: περι των πρώτων ονομάτων . . μάλιστά τε καὶ καθαρώτατα δεί ἔχειν ἀποδείξαι, ἡ εὖ είδέναι, ὅτι τά γε ὕστερα ἤδη φλυαρήσει). Things have their natural divisions, according to which we must divide them if we do not wish to err (387 A: κατὰ τὴν φύσιν τοῦ τέμνειν τε καὶ τέμνεσθαι καὶ & πέφυκε). Things are as they are, according to their own nature (386 Ε: καθ' αὐτὰ πρὸς τὴν αὐτῶν οὐσίαν ἔχοντα ἦπερ πέφυκεν) and not according to our imaginations (386 E: οὐ πρὸς ἡμᾶς οὐδὲ ὑΦ' ἡμῶν, ἐλκόμενα ἄνω καὶ κάτω τῷ ἡμετέρω φαντάσματι), which produce error and wrong belief as opposed to truth (385 B). Against those who pretended that error is impossible (429 D) Plato shows the origin of error in the incompetent use of language. Words are instruments (388 A: δργανον) of thought, for educational purposes and for logical distinctions (388 c: διδασκαλικόν καλ διακριτικον της οὐσίας); they imitate things (430 B: δυομα μίμημα τοῦ πράγματος) as their symbols (433 B: δήλωμα συλλαβαίς και γράμμασι πράγματος, also 435 B), and vet are not always similar to them (432 D), because a good word-maker is the rarest of all artisans (389 A:

Origin of error in the wrong use of language: it is the privilege of the dialectician to use words δημιουργών σπανιώτατος), and if he does not work after in the the dialectician's directions, he may have named things proper not according to their nature (432 E). The competent use of right words is the dialectician's privilege (390 c) and those who do not possess the dialectical power are liable to employ words in a manner contrary to their intention, whence mistakes arise (431 B). Thus truth differs from falsehood (385 B). The worst source of error is self-deception, because the deceiver never abandons the deceived (428 D) and makes him disagree with himself (433 B: cf. Gorg. 482 B).

Here Plato confirms what he said in the Gorgias Consistabout contradiction as the mark of error, and consistency ency a Truth is found in the unity condition as the condition of truth. and similarity of things (438 Ε : μαθείν (τὰ ὄντα) . . . δι' άλλήλων, εί πη ξυγγενή έστιν, καὶ αὐτὰ δι' αὐτῶν). What method should be used for ascertaining truth Plato declines to explain (439 B: μείζον ἴσως ἐστὶν ἐγνωκέναι ἡ κατ' ἐμὲ καὶ σέ), but he insists that knowledge is not to be gathered from words (439 B: ἀγαπητὸν δὲ καὶ τοῦτο ομολογήσασθαι ότι οὐκ ἐξ ὀνομάτων, ἀλλὰ πολύ μᾶλλον αὐτὰ ἐξ αὐτῶν καὶ μαθητέον καὶ ζητητέον), for the first word-maker, if he named things according to their nature, must have had a knowledge of them not gained through words (438 B).

of truth.

Plato thus claims for his philosophical pursuit the Philo authority to judge about the propriety of words (425 A), to change their meaning and to make new words according to the requirements of his dialectic. He has largely used that liberty in his later works, whereas but few new words occur in the Socratic dialogues. The Cratylus proclaims the philosopher's independence of and power over language. Faithful to the a priori character of his knowledge, Plato despises statistics (437 D) and inferences from a majority of cases. He wants a sound basis and beginning for each theory (436 D: δεί περὶ της ἀρχης παντός πράγματος παντί άνδρί του πολύν λόγον είναι καὶ

sopher's independence of language, and power Divine origin of language not accepted as sufficient explanation. τὴν πολλὴν σκέψιν) and betrays his geometrical predilections by adducing the familiar analogy of a small error unnoticed in the commencement of a geometrical construction (436 D: διαγραμμάτων ἐνίστε τοῦ πρώτου σμικροῦ καὶ ἀδήλου ψεύδους γενομένου, τὰ λοιπὰ πάμπολλα ἤδη ὄντα ἐπόμενα ὁμολογεῖν ἀλλήλοις). He does not recognise a reference to divine origin as an explanation of anything, comparing it with the introduction of gods on the dramatic stage, when no better solution is forthcoming (425 D), and calling it a clever evasion of the duty of giving reasons and proofs (426 A). Still, the religious spirit of the Gorgias is not extinct, and God remains free from human contradictions (438 C), while the future life is assumed as a matter of course (403 D), with the addition, that it is dominated by philosophy (404 A).

The special problem here brought forward is not decided. Only extremes repudiated.

It is curious, however, to see that this increasing confidence in the power of dialectic and philosophy seems to fail him in the concrete problems with which he is chiefly concerned in the Cratulus. The avowed purpose of the inquiry is to ascertain the origin of language, and the discussion, not invariably quite serious, of many etymologies ends in a compromise between two conflicting theories. As a result of the Cratylus we must recognise the view that there is a certain natural phonetic expression of thoughts, but that this is adulterated through the wordmaker's errors, which remain in the language by tacit consent of the people speaking any dialect. Both extreme theories of language, as the result of an agreement, or as a product of divine inspiration, are here repudiated. Plato in this dialogue employs a method very familiar to the readers of his later writings, consisting in beginning a discussion with some secondary topic, and passing from this to a deeper consideration of some problem not thought of at the outset. Here the question of the origin of language is a pretext leading to the metaphysical distinction between substance and appearance, and identifying the substance of a thing with the object of true knowledge.

This is a logical investigation, widely different from the simpler ethical inquiries which pervade the Socratic dialogues.

The importance of the Cratylus as a first chapter in Logical Platonic logic has not been always recognised. Plato has even been supposed to imply that consistency is no test of truth (Jowett, i. 263). This inference is based on the passage in which Plato explains by a geometrical analogy the possibility of concealing an initial error of reasoning analogy. beneath a subsequent 'enforced' consistency (436 D: τὸ πρώτον σφαλείς ο τιθέμενος τάλλα ήδη προς τοῦτ' ἐβιάζετο καὶ ξυμφωνείν ηνάγκαζεν). Such an artificial and only Only artiapparent consistency was clearly distinguished by Plato ficial and from true self-consistency, which had been proclaimed already in the Gorgias (482 B: οὔ σοι ὁμολογήσει Καλλικλῆs, & Καλλίκλεις) as a test of truth, and is again used as such a test in the Cratylus (433 B: εἰ ταῦτα ἀμφότερα ἐρεῖs, truth. ούγ οίός τ' ἔσει συμφωνείν σαυτώ). The familiar example of a wrong consistency was adduced only in order to show the decisive importance of the first principles in every science (436 D). The ideal consistency required by Ideal conphilosophy is not expected by Plato to be found in a sistency language (435 c), though he affirmed that language to be not found the most beautiful in which the greatest consistency To build such an ideal language by reigned (435 D). creating a philosophical terminology was a task which Plato subsequently undertook in part, but which he almost ridiculed when he wrote the Cratylus (433 E; cf. Polit. 261 Ε: μη σπουδάζειν ἐπὶ τοῖς ὀνόμασι).

The Cratylus, a literary masterpiece comparable in its The originality to the Parmenides, was held by the successors of Plato in an esteem attested by the commentary of Proklos,180 and has up to the present day exercised the perspicacity of numerous commentators, as can be seen

tators. and its authenticity certain. from the writings of Dittrich, 181 Benfey, 182 Hayduck, 183 Rosenstock, 184 Heath, 185 P. Meyer, 186 and Bonitz 187 on this dialogue. What Schaarschmidt (p. 245 sqq.) said against the authenticity of the Cratylus has been sufficiently refuted by Alberti,188 Lehrs,189 Luckow,190 Dreykorn, 191 and H. Schmidt, 192 so that even Huit (ii. p. 187), who popularised in France Schaarschmidt's doubts as to many other dialogues, thought it advisable to dissent in this respect from his master, and to defend the authenticity of the Cratylus.

Etymologies quoted to a great extent justified by the state of linguistic

One of the grounds alleged by Schaarschmidt, the apparent absurdity of the etymologies proposed, has been explained by Schäublin, 193 who compared these etymologies with other evidence about the knowledge of etymology accessible to Plato, and found that among 120 etymologies attempted by Plato over sixty were perfectly justified according to the knowledge of his times, and twenty stand even the test of our present knowledge of Schäublin has also carefully compared the knowledge Greek.

etymologies given in the Cratylus with other etymologies in Plato's occasionally indicated by Plato, and he demonstrates their times similarity and good faith against Steinthal 194 who believed all the etymologies given in the Cratylus to be arbitrary.

Competent writers disagree widely as to the date of The date the Cratylus. Even C. Ritter, notwithstanding his of the stylistic observations, believed it possible for the Cratylus Cratylus to have been written before the death of Socrates, as has been thought also by the poet Gray, 195 by Socher, Stallbaum, and others. This opinion is mined. opposed by those who believe the Cratylus to be later Mention than the Phaedo and Phaedrus, as for example by Ast, and in recent times by Peipers and Bergk. The style gives a would (see above, p. 168) place this dialogue clearly between the Gorgias and Phaedo, and the logical contents also point to the same result, the Cratulus being introductory to the logical theories of the Phaedo, while presupposing the conclusion of ethical inquiries summed up in the Gorgias. Some other hints confirm the position here given to the Cratylus as the first logical work subsequent to the complete series of ethical dialogues. Dümmler 196 observes that the allusion (433 A) to the early closing of the gates in Aegina presupposes a time of peace in which Athenians and more especially Plato's students could make excursions to the neighbouring town. But such a time of peaceable intercourse between Athens and Aegina was not possible, so Dümmler thinks, before the peace of Antalcidas, or 387 B.C. The Cratylus must then have been written later, after Plato's return from his

has been differently deterof Aegina useful indication.

¹⁹⁴ Steinthal, Geschichte der Sprachwissenschaft bei den Griechen and Römern, Berlin 1862.

¹⁹³ Thomas Gray, Notes on Plato, in vol. iv. pp. 67-338 of the Works, edited by E. Gosse. London 1884 (first published 1814), p. 164, calls the Cratylus 'the least considerable' of the works of Plato.

Dümmler, Chronologische Beiträge zu einigen platonischen Dialogen aus den Reden des Isokrates, Basel 1890, p. 48; Christ, Platonische Studien, p. 8. made it probable that Plato had money transactions in Aegina.

first voyage to Sicily, and also after his captivity in Aegina,—if the story of this captivity is true.

Hellenes and foreign nations spoken of as equal. dialogues. This seems to imply that the Cratylus WAA written after Plato's voyages, perhaps at the beginning of his teaching activity.

Another confirmation of this view is given by the impartiality with which Plato treats foreign nations in the Cratylus as equal to the Greeks (383 A: ὀρθότητα ὀνομάτων καὶ "Ελλησι καὶ βαρβάροις τὴν αὐτὴν ἄπασιν 390 Α: τὸν νομοθέτην τόν τε ἐνθάδε καὶ τὸν ἐν τοῖς as in later βαρβάροις 425 Ε : είσὶ δὲ ἡμῶν ἀργαιότεροι $\beta \acute{a}\rho \beta a \rho o \iota$, see also 385 E, 390 c, 409 E). This conception remains unchanged in many later works, as the Symposium, Phaedo, Republic, Theaetetus, Politicus, Timaeus, while it is opposed to the narrow Greek and even Athenian patriotism, shown in the Protagoras, in which Athens is called the seat of wisdom (Prot. 337 D: πρυτανείον της σοφίας) by the non-Athenian Hippias. In the Gorgias Athens is praised as the place in Hellas where the greatest freedom of speech is to be found (461 E: 'Αθήναζε άφικόμενος, οὖ τῆς Ἑλλάδος πλείστη ἐστὶν ἐξουσία τοῦ λέγειν), without any mention of foreign countries, such as occurs repeatedly in the Cratylus, whenever the whole of Greece or the Greeks are named. This frequent mention of foreign nations in the Cratylus seems to belong to a time when the horizon of Plato's experience had been considerably enlarged by his travels abroad, while the subject of the origin of Greek language, generalised into the inquiry about the origin of human speech and the relation of thought to it, would seem to have been specially debated in Plato's school. The moral problems discussed in the preceding dialogues were inherited from Socrates, though their solution in the Gorgias is already Platonic: the problem of language as a source of knowledge has been attributed to Antisthenes,197 and the peculiar proof that philosophic truth is independent of

¹⁹⁷ The very uncertain allusions of the Cratylus to this philosopher are treated by Dümmler, Akademika, pp. 148-161; K. Barlen, Antisthenes und Plato, Progr. Neuwied 1881; K. Urban, Ueber die Erwähnungen der Philosophie des Antisthenes in den platonischen Schriften, Königsberg 1882

language, contained in the Cratylus, is a worthy inauguration of Plato's own philosophical career, in which he was distinguished from all predecessors by his power over language as an external instrument for conveying thought. Plato, the great word-maker, could not better begin his new philosophy than by this inquiry into the relation between thought and speech. The counterpart of this, the inauguration of Plato's logic, is to be found in the Symposium, where the philosopher was led to a new vision of truth as consisting in eternal and self-existent, independent ideas, those Platonic 'ideas' which have been accepted by so many readers as the quintessence of Platonism.

II. The Symposium.

(Relative affinity to the latest group, measured on the Laws as unity, = 0.14; see above, p. 169.)

Nearly every other work of Plato admitted of discus- Chief subsion as to the author's purpose and the chief contents. ject of the The Symposium, however, is distinguished by a clear Sympoannouncement of its aim, and deals apparently only with one subject, love, teaching the first lesson of that new feeling discovered by Plato and in its first stage known even to-day as Platonic by some people who know nothing leading else of Plato. It would appear that in this lesson of love to knowno room could be left for logic. But Plato, who is ledge. at once a great poet and a great logician, initiates us into the mystery of his first logical discovery through this triumphant poem of victorious love. It is love, For the he says, that leads to the highest knowledge of truth. But not the love of a single person, however pure, nor the love of a single city, be it the greatest on earth, nor the love of a single science. There is far above all these feelings a new and powerful love, difficult to understand even for Socrates, who has heretofore been repre- but not a sented as the wisest of men. The explanation of this historical feeling, expressed by nobody before Plato, he puts person.

sium love, but a new kind of

first time Socrates is supplanted by another teacher.

poetically in the mouth of a woman. This woman, Diotima of Mantinea, is invented by Plato, though he gives her an historic appearance by the assertion that through her prayers she preserved the Athenians from the plague. If she had been, as Plato makes his readers believe, a well-known and inspired priestess, Thucydides could not have failed to mention her. But no Greek writer 198 before Plato knows anything about a Diotima of Mantinea, and all later mentions of her are based on the Symposium.

Diotima unknown to Thucydides: probably invented by Plato in order to give apparent historical authority to his own teaching.

We may therefore assume that the new theory, here ascribed to Diotima, is Plato's own invention. first time in all Plato's dialogues, Socrates ceases to be the sole teacher of wisdom, and Plato unmistakably implies that his new wisdom may be above the understanding even of his teacher (210 A: ταῦτα μὲν οὖν τὰ έρωτικά ίσως, ώ Σώκρατες, κάν σύ μυηθείης τὰ δὲ τέλεα καὶ **ἐποπτικά, ὧν ἔνεκα κα**ὶ ταῦτα ἔστιν, ἐάν τις ὀρθῶς μετίη, οὐκοίδ' εἰ οίός τ' ἀν εἴης . . . πειρώ ἔπεσθαι, ἀν olós te is). He clearly hesitates to expose the treasure found in solitary meditation to the unprepared adherents of vulgar love. He apologises repeatedly for the admitted obscurity of his teaching (201 D: πειράσομαι διελθεῖν δπως αν δύνωμαι. 204 D: πειράσομαι διδάξαι . . . σαφέστερον ἐρῶ (also 206 c) . . . 206 Β: μαντείας δεῖται ο τί ποτε λέγεις . . . 207 c : μη θαύμαζε (also 208 B) 210 Α: ἐρῶ μὲν οὖν καὶ προθυμίας οὐδὲν ἀπολείψω . . . 210 Ε: πειρώ δέ μοι τον νούν προσέχειν ώς οδόν τε μάλιστα). It is evident that the new-found knowledge is looked upon as far more important than anything which has been said in earlier dialogues. Like a precious gem, it is set in the poetical gold of the Symposium—the most consummate work of art which even Plato's genius has produced.

New theory If we ask wherein consists the new logical knowledge

¹⁹⁸ The unhistorical character of Diotima was made evident by Hermann, De Socratis magistris et disciplina juvenili, Marburg 1837, p. 12 sqq.

immortalised by the Symposium, we see it condensed in a of ideas few pages of the highest eloquence, which may be read as a record of personal experience, and as the result of the long previous development of Greek art. Lévêque 199 in France and Cohen 200 in Germany have noticed the near relation between the origin of Plato's theory of ideas and this preceding growth of Greek art. What Plato says about his discovery amounts to this: if somebody grows accustomed to generalisations and to the progress from particulars to general notions, then, at a certain moment Theidea as of his life, he will become suddenly (210 Ε: ἐξαίφνης) the cause aware of the existence of the general idea as something of partiwhich does not depend upon particulars, but is the true origin of all particular qualities. This sudden vision, here pictured with the natural delight of a first discovery, is the aim of all intellectual development (211 A: τοῦτο έκεινο ού δη ένεκα και οι έμπροσθεν πάντες πόνοι ήσαν), a marvellous beauty (210 Ε: θαυμαστὸν τὴν φύσιν καλόν) leading to every kind of virtue and to the immortality of man (212 A: τεκόντι ἀρετὴν ἀληθῆ καὶ θρεψαμένω ὑπάρχει θεοφιλεῖ γενέσθαι, καὶ εἴπερ τω ἄλλω ανθρώπων, αθανάτω και ἐκείνω).

based on the preceding growth of Greek art.

What kind of existence the idea of the beautiful Existence possesses is difficult to express in human language, according to Plato's own confession. But this existence was clearly meant by Plato, when he wrote the Symposium, to be a solution of the problem of substance proposed in the Cratylus. In that dialogue he limited his indications as to the substance of things to a few and ap-

of ideas difficult to explain. It is independent of opinions pearances.

¹⁴⁸ Carolus Lévêque, Quid Phidiae Plato debuerit, Parisiis 1852, p. 60: 'Quaecumque Plato de pulchritudine scripsit . . . haec in Phidiae deorum vultu expressa et ut ita dicam sculpta invenerit, ita tamen ut ad intelligendum penitus Phidiae ingenium ingenio Platonis opus fuerit. Ab illo qua via ad summae pulchritudinis ideam perveniatur didicit.'

²⁰⁰ Hermann Cohen, 'Die platonische Ideenlehre, psychologisch entwickelt,' in vol. iv. pp. 403-464 of Zeitschrift für Völkerpsychologie und Sprachwissenschaft, Berlin 1866, p. 413: 'Platos That wie sein Geist wächst hervor aus dem gemeinsamen Samen der hellenischen Weltarbeit.'

The idea is more perfect than a work of art.

determinations, such as permanence and objectivity. Now he has 'suddenly' perceived a beauty not only eternal (211 A: ἀεὶ ον καὶ οῦτε γιγνόμενον οὖτε ἀπολλύμενον, οὖτε αὐξανόμενον οὖτε $\phi\theta$ îνον) and objective, but also absolute, that is, independent of time and space, and of concrete appearances as well as individual opinions (οὐ τῆ μὲν καλόν, τῆ δ' αἰσγρόν, οὐδὲ τοτὲ μέν, τοτὲ δὲ οὔ, ούδὲ πρὸς μὲν τὸ καλόν, πρὸς δὲ τὸ αἰσχρόν, οὕδ' ἔνθα μὲν καλόν, ἔνθα δὲ αἰσχρόν). It is natural that Plato, being himself an artist and living in an age when art had reached an ideal perfection, should formulate this first assertion of a self-existent absolute idea with reference to the idea of beauty. He saw the distance between all human models and such a creation of art as the Olympian Zeus of Phidias. He imagined that even the most perfect work of art is only a particular instance of the ideal beauty, which he did not claim to perceive with the mortal eve, but with the divine insight of an enthusiastic soul. He recommends his readers to acquire this superior faculty of intellectual intuition by exercise in generalisation. He says clearly that the idea is not only immaterial (211 A: οὐδ' αὖ φαντασθήσεται αὐτῷ τὸ καλον οίον πρόσωπόν τι ούδε γείρες ούδε άλλο ούδεν ών σῶμα μετέχει) but not even intellectual (211 A: οὐδέ τις λόγος, οὐδέ τις ἐπιστήμη, οὐδέ που ον ἐν ἐτέρφ τινί, οἶον ἐν $ζ \dot{\phi} \dot{\phi} \dot{\eta}$ ἐν $\gamma \dot{\eta}$ ἡ ἐν οὐραν $\dot{\phi}$ ἡ ἔν τ $\dot{\phi}$ ἄλλ $\dot{\omega}$), nor inherent in the soul as a notion, nor in anything else. Here we have an evident indication that Cohen's 201 doubts as to the separate existence of Platonic ideas, however justified with reference to other works, are inadmissible so far as concerns the Symposium, and the idea of Beauty, the first discovered by Plato and the only idea spoken of in

Intuition
of ideas is
acquired
by exercise in
generalisations.

201 H. Cohen, Platons Ideenlehre und die Mathematik, Marburg 1879, p. 9: 'Diese Auffassung des χωρισμόs ist einmal des Aristoteles eigenste verantwortliche That. Ob wir sie hätten, ob Jemand aus den Platonischen Dialogen sie herausgelesen haben würde, wenn Aristoteles sie nicht als die legitime gelehrt und—unerschrocken verhöhnt hätte, das darf wenigstens bezweifelt werden.'

the Symposium. This idea is certainly not immanent, but separated from concrete things. The relation of single beautiful things to the idea of beauty is expressed here by the word μετέγειν, not used in any earlier dialogue to express the relation of a particular thing 202 to a general notion. It means that all beautiful things owe their beauty to the idea of Beauty. This idea is not here called ellos or ibéa, but is named 'the beautiful' (211 B. τὸ καλόν). It is self-existent, needs nothing else to enable of all it to exist eternally (211 B: αὐτὸ καθ' αὐτὸ μεθ' αὐτοῦ μονοειδες ἀεὶ ὄν), and Plato has invented the term μονοειδέs, first used in the Symposium, to mark its simplicity. According to modern terminology Platonic Beauty is then a simple substance, the original cause of all individual beauty, suffering no alteration through its action on the particular things, to which it imparts its its simown quality, though in a lesser degree.

Plato admits this ideal Beauty to be an object of science and knowledge (211 c: $\mu \acute{a}\theta \eta \mu a$), but he leaves it uncertain whether he pretends to know it as it really is, or only as it appears to him. When, however, he

The idea of Beauty is the source beautiful things, exists eternally, being subiect to no changes in plicity.

Ideas as objects of knowledge apparently

²⁰² This term in Symp. 211 B is paraphrased rather than translated by Jowett in the words: 'Beauty absolute . . . which . . . is imparted to the ever growing and perishing beauties of all other things.' μετέχειν meaning the relation of things to ideas is used for the first time in the Symposium, while in earlier works it had the current meaning with which it is found in other authors, translated (Jowett) by 'share in' (Prot. 322 D, 323 A, virtue and other arts), 'take part in' (conversation, Euthyd. 271 B, danger, 279 E), 'are intermediate between' (philosophy and politics, Euthyd. 306 AB), 'is proficient' (in an art, Gorg. 448 c), 'partake' (of good and evil, Gorg. 467 E). The technical meaning of peréxes as designating the relation of things to ideas is limited almost entirely to the Symposium and Phaedo (100 c, 101 c, cf. Rep. v. 476 d), while in the Parmenides (where the abstract noun $\mu \epsilon \theta \epsilon E is$ also occurs) it is mentioned and criticised. In other dialogues μετέχειν is used in the ordinary meaning (as for instance Rep. 432 B. 455 D. 465 E, 520 B, &c.; Phaedr. 247 B, 249 E, 272 D; Phil. 11 c, 54 B, 56 C; Tim. 27 c, 53 c, 58 E; Legg. 721 D, 755 A, 963 E, &c.). The peculiar use of μετέχειν in the Sophist (as 251 E) to mark the relation between two general notions is quite different from the meaning of a participation of things in ideas. An alternative term for μετέχειν is μεταλαμβάνειν. Cf. Jowett and Campbell, Rep. vol. ii. p. 309.

identical with our subjective notions. speaks of exercise, as enabling us to improve our sight of absolute Beauty (211 B: ὅταν . . . ἐπανιὼν ἐκεῖνο τὸ καλὸν ἄρχηται καθορᾶν, σχεδὸν ἄν τι ἄπτοιτο τοῦ τέλουs), we must infer that he allowed the possibility of an immediate intuition of absolute Beauty as it is, without subjective error. He did not yet see the peculiar difficulties of such a position.

Knowledge
remains
right
opinion
based on
grounds or
sufficient
reason, in
the Symposium
like in the

Meno.

Though Plato in the Symposium thus presents a new object of knowledge, he seems not to have progressed as to the definition of knowledge itself beyond the distinction given in the Meno, according to which knowledge differs from right opinion by the reasons which we are bound to give when we know something. Here he recalls this distinction:

Μοπο 98 Α: δόξαι άληθεῖς . . . οὐ πολλοῦ ἄξιαί εἰσιν, εως ἄν τις αὐτὰς δήση αἰτίας λογισμῷ. ἐπειδὰν δὲ δεθῶσιν, πρῶτον μὲν ἐπιστῆμαι γίγνονται, ἔπειτα μόνιμοι καὶ διὰ ταῦτα δὴ τιμιώτερον ἐπιστήμη δρθῆς δόξης ἐστίν, καὶ διαφέρει δεσμῷ.

Symposium 202 A: τὸ ὀρθὰ δοξάζειν ἄνευ τοῦ ἔχειν λόγον δοῦναι, οῦτε ἐπίστασθαί ἐστιν · ἄλογον γὰρ πρᾶγμα πῶς ἄν εἴη ἐπιστήμη; οὕτε ἀμαθία · τὸ γὰρ τοῦ ὅντος τυγχάνον πῶς ἀν εἴη ἀμαθία; ἔστιν δὲ δή που τοιοῦτον ἡ ὀρθὴ δόξα, μεταξὺ Φρονήσεως καὶ ἀμαθίας.

If right opinion without reasons is not knowledge, yet knowledge might still be for a modern logician something else than right opinion with reasons for it, but if Plato had changed his view of the nature of knowledge expressed in the *Meno*, he could not conceal it here, because every unprejudiced reader infers that knowledge, not being right opinion without reasons, is right opinion based on reasons, as had been stated expressly in the *Meno*, and denied only much later in the *Theaetetus*.

Distinction between Wisdom and Philosophy common A fresh point is gained in the distinction between wisdom and philosophy, which is repeated later in the *Phaedrus*, and here founded on the etymology of the name 'philosopher,' as one who desires wisdom and therefore does not yet possess it. It is noteworthy that even in the etymologies of the *Cratylus* Plato did not allude to this new meaning of 'philosophy,' which is

first explained in the Symposium (203 E: θεων οὐδεὶς Sympoφιλοσοφεί οὐδ' ἐπιθυμεί σοφὸς γενέσθαι · ἔστι γάρ · οὐδ' εί sium and τις άλλος σοφός, οὐ φιλοσοφεί). This exaltation of a wisdom above philosophy, which in the Euthydemus and Gorgias was still the highest science, corresponds to the new power of intuition of Beauty, which is placed above all other knowledge. Plato became conscious of the limitations of that purely ethical knowledge of which he was so proud in the Gorgias. He felt an artistic longing for a perfection beyond pure logical investigation and reasoned knowledge, even beyond knowledge based on full consciousness of all reasons. He was thus led to this almost unthinkable conception of absolute Beauty.

Phaedrus.

Another consequence of the new idealism is the change Different of position as to personal immortality. It is not clearly view of denied, at least for the philosopher (212 A), but the religious faith as laid down in the Gorgias has been converted into a pantheistic view according to which immortality consists in the eternal reproduction of the nosium. same ideal form (208 A: τούτω τῶ τρόπω πᾶν τὸ θνητὸν σώζεται, οὐ τῶ παντάπασιν τὸ αὐτὸν ἀεὶ είναι ὥσπερ τὸ θείου, άλλὰ τῷ τὸ ἀπιὸν καὶ παλαιούμενον ἔτερον νέον έγκαταλείπειν οίον αὐτὸ ἢν, cf. Legg. 721 c).

immortality in Gorgias and Sum-

This renovation of particulars is applied even to Peculiar knowledge (208 A: πολύ δὲ ἀτοπώτερον ἔτι, ὅτι καὶ αί ἐπιστήμαι μη ότι αί μὲν γίγνονται, αί δὲ ἀπόλλυνται ἡμῖν. καὶ tellectual οὐδέποτε οι αὐτοί ἐσμεν οὐδὲ κατὰ τὰς ἐπιστήμας, ἀλλὰ exercise καὶ μία ἐκάστη τῶν ἐπιστημῶν ταὐτὸν πάσχει). Exercise with renokeeps knowledge apparently the same, yet constantly vation of renewed, and creates new knowledge which seems to matter. be the same as that which we had before (208 A: μελέτη πάλιν καινην έμποιούσα άντι της άπιούσης σώζει την ἐπιστήμην, ὥστε τὴν αὐτὴν δοκεῖν εἶναι). This surprises Plato himself more than the exchange of elements in the body, and it seems to contradict the identity of knowledge admitted in the Gorgias. But the contradiction is only apparent, as the identity referred to the objective know-

view of incompared

ledge, and the successive substitutions are attributed to the individual. It was a consequence of the growing admiration of Plato for knowledge, that at this stage the subject disappeared as compared with the object, which became the only true reality. Thus was founded the system of idealism, known as the Platonic theory of ideas. In the *Symposium* it appears as a first attempt and is limited to the idea of Beauty.

Literary merits of the Symposium. This logical importance of the Symposium has been little noticed up to the present time, being overshadowed by its literary perfection. Such poets as Racine ²⁰³ and Shelley ²⁰⁴ have attempted to render it in modern language, and many editors and commentators have spent their leisure on the text.²⁰⁵

Date of the Symposium 885 B.c., almost There is an almost general agreement as to the date of the Symposium, the mention of the recent partition of Mantinea, which occurred 385 B.C., being admitted as a sufficient indication that the dialogue cannot have been written much later.²⁰⁶ This conclusion was suffi-

²⁰⁸ Le Banquet de Platon, trad. par J. Racine, M^{mc} de Rochechouart et Victor Cousin, Paris 1868; also in Œuvres de J. Racine, ed. L. Aimé Martin, Paris 1844, vol. v. pp. 95–186. Racine's translation extends only up to the speech of Eryximachus.

²⁰⁴ Percy Bysshe Shelley, *The Banquet of Plato*, London 1887 (first ed. 1840). Shelley held the *Symposium* to be 'the most beautiful and perfect' among the works of Plato.

Besides modern editions of F. A. Wolf (Lipsiae 1782, also 1828), Ast (Landshut 1809), P. A. Reynders (Groningae 1825), L. J. Rückert (Lipsiae 1829), A. Hommel (Lipsiae 1834), de Sinner (Paris 1834), Jahn (Bonn 1864, re-edited by Usener, Bonn 1875), C. Badham (London 1866), G. F. Rettig (Halle 1875-76), it is worth noticing that the Symposium (ed. Salamanca 1558) was the first Greek publication of the famous Salamanca University Press. An extensive commentary on the Symposium was written already by the second French translator Loys Le Roy (Le Sympose de Platon, Paris 1559), who omitted the discourse of Alcibiades as too indecent for his French readers of the sixteenth century! The first translation was Le Banquet de Platon, trad. par M. Heret, Paris 1556, a beautiful specimen of typography.

years old, as for instance in the Gorg. 508 c the death of Perioles is called recent (reωστ!), while from Gorg. 478 z it results, that the conversation between Gorgias and Socrates is assumed to have taken place 405 s.c. or twenty-four

ciently established in the last century by F. A. Wolf and unanihas been successfully defended 207 against some attempts mously at another interpretation.²⁰⁸ The mention of this event accepted comes out so naturally that it cannot be regarded as a later interpolation added by the author or by his copyists. But it would still leave it open whether the Symposium anachronwas written in the same year or some years later, because ism. for any contemporary reader an historical fact which occurred four or five years ago is still quite recent. Other considerations, however, make even the year 385 B.C. seem a late date for the Symposium, so that there is no probability in favour of a later time. The chief reason Great which makes it improbable that Plato could have written number the Symposium much after 385 B.C. is the great number of works of works which, as our further inquiry will show, are later than the Symposium, and which also must be earlier than the change characterising the latest stage of Small Plato's authorship. On the other hand, the number of number works which precede the Symposium is very small for of larger the space of fifteen years since the death of Socrates. works pre-Admitting the Euthydemus to have been written about 390 B.C., as has been made very probable by Spengel, Teichmüller, Sudhaus, and Dümmler, we have for the five following years only the Gorgias and the Cratylus, which is not much for a gifted author about the age of forty and at the height of his literary power.

on account of a well-

later than the Symposium. ceding it.

years after the death of Pericles. But in referring to a time so far back Plato is careless of the exact dates.

207 Besides Wolf in his edition of the Symposium (1782), also J. Spiller (De temporibus Convivii Platonici, Glivitti 1841), Ueberweg (Untersuch. p. 219), Teichmüller (ii. p. 262), L. v. Sybel (Platons Symposion, Marburg 1888), Kassai (Meletemata Platonica, p. 859, Budapest 1886), have shown that the Symposium must have been written about 385 B.C.

208 A. Hommel, in his edition of this dialogue, tried to get rid of the anachronism by an emendation of the text. Dümmler believes that the reference to the partition of Mantinea might have been made also about 371, when the reunion of the separated parts of Mantinea was intended. Recently U. v. Wilamowitz-Moellendorff (Hermes, vol. xxxi. p. 102) suggested the dissolution of the Arcadic Union in 418 B.C. as the event alluded to by Aristophanes.

difficulty is avoided by those who place before the Symposium such dialogues as the Phaedo and Phaedrus, 209 not to speak of the dialectical works. But our subsequent exposition will prove beyond all doubt that these works must have been written after the Symposium. Besides, the Symposium, according to the very plausible reasoning of Sybel and also of Teichmüller, bears the character of having been written under the fresh impression of the successful beginning of Plato's Academy, which was probably founded in 387 B.C.

The Symposium as an academical programme.

Position intermediate between Cratylus and Phaedo.

First introduction of absolute Beauty or the idea of Beauty.

Various other indications confirm the intermediate position of the Symposium between the Cratulus and Phaedo, after the Gorgias and the other Socratic dialogues. In the Cratylus, Plato did not advance beyond a general distinction between substance and appearance, without any close determination of substance. In the Symposium this determination is given in regard to the substance of Beauty in a manner which makes it very probable that Plato is for the first time announcing his discovery of absolute being. In all earlier dialogues Socratic notions were 'present' in the things, or immanent (Charm. 159 A: πάρεστι σωφροσύνη, Lys. 217 D: λευκότης, 217 E: παρουσία ἀγαθοῦ, Euthyd. 301 A: κάλλος, Gorg. 497 E, 498 D: ἀγαθῶν παρουσία); in the Symposium the higher doctrine of a participation of particulars in the idea is taught. The doctrine of preexistence, which had been formulated in the Meno, is

200 If C. Huit (Etudes sur le Banquet de Platon, Paris 1889) believes that all competent writers agree in placing the Phaedrus before the Symposium, except Ritter and Teichmüller, he betrays his ignorance of many authors, as Suckow, Munk, Thompson, Campbell, Blass, Dittenberger, Schanz, Droste, Kugler, Gomperz, Lina, Tiemann, who all agree in placing the Phaedrus after the Symposium. It is true that against these fourteen authors, who up to the time of Huit's strange assertion held the Symposium to be earlier than the Phaedrus, many others, as for instance, Schleiermacher, Stallbaum, Steinhart, Susemihl, Ueberweg, Liebhold, Teuffel, Peipers, Windelband, Christ, Zeller, were of the contrary opinion. But majorities cannot decide such questions, and since 1889 the proportion is reversed, so that the majority of new investigators take the later date of the Phaedrus for granted.

here only alluded to casually in the discourse of Aristophanes.210

The rule laid down in the Protagoras (347 c) to Referexclude flute girls and similar artists from philosophical banquets is repeated in the Symposium (176 E), with the recommendation to find the best entertainment in conversation (Prot. 347 c : διὰ τὸ μὴ δύνασθαι ἀλλήλοις δι' ἐαυτῶν συνείναι . . . διὰ της ἐαυτῶν φωνης καὶ τῶν λόγων των ξαυτών ύπο άπαιδευσίας, τιμίας ποιούσι τάς αὐλητρίδας: cf. Symp. 176 E: εἰσηγοῦμαι τὴν μὲν ἄρτι είσελθοῦσαν αὐλητρίδα χαίρειν ἐᾶν . . . ήμᾶς δὲ διὰ λόγων άλλήλοις συνείναι). This appears, if we compare the passages, to be said in the Symposium as a matter of course, while it is explained at length in the Protagoras. Some other references to earlier dialogues are of the same kind:

dialogues.

Gorg. 490 E: Socrates says:τὸν σκυτοτόμον ἴσως μέγιστα δεῖ ύποδήματα καὶ πλεῖστα ὑποδεδεμένον περιπατείν, to which Kallikles answers: Φλυαρείς . . . and ael ταὐτὰ λέγεις,-491 Α: οὐ σκυτοτόμους λέγω . .

Crat. 888 D : ἀρ' οὖν πᾶς χαλκεὺς ἡ ὁ τὴν τέχνην ἔχων, also 889 E άπας χαλκεύς. Euthyd. 278 D: μή μου καταγελατε. Gorg. 478 E: Socrates complains of Polos, who is represented as ἄπειρος καὶ ἀνόητος: άλλο αὖ τοῦτο εἶδος ελέγχου . . . καταγελάν. Gorg. 512 D: καταγέλαστός σοι ὁ ψόγος γίγνεται refers to 484 D: (φιλόσοφοι) καταγέλαστοι γίγνονται.

Symp. 221 E: εὶ ἐθέλοι τις τῶν Σωκράτους ἀκούειν λόγων, φανείεν άν γελοίοι τὸ πρώτον . . . ὄνους γάρ . . . λέγει καὶ χαλκέας τινάς καὶ σκυτοτόμους . . . καὶ ἀεὶ διὰ των αὐτων τὰ αὐτά φαίνεται λέγειν, ώστε ἄπειρος καὶ ἀνόητος ἄνθρωπος πας αν των λόγων καταγελάσειεν.

198 c: καὶ γάρ με Γοργίου ὁ λόγος ανεμίμνησκεν . . . εφοβούμην μή μοι τελευτών δ 'Αγάθων Γοργίου κεφαλην δεινού λέγειν έν τῷ λόγφ ἐπὶ τον έμον λόγον πέμψας αὐτόν με λίθον τη άφωνία ποιήσειεν καλ ενενόησα τότε άρα καταγέλαστος

The vulgarity of examples usually quoted by Socrates defended.

Gorg. 456 B: ἔπεισα, οὐκ ἄλλη τέχνη ἡ τῆ ἡητορικῆ.

This seems to have been overlooked by Grote (vol. iii. p. 17) when he says that in the Symposium no such doctrine is found. It is important to notice this, because the entire absence of the pre-existence theory in the Symposium might lead to wrong chronological conclusions, at least as to the date of the Meno.

It seems as if the examples chosen in the *Gorgias* and *Cratylus* had provoked some critics, whom Plato answers in the *Symposium*, though the description given by Alcibiades corresponds also to the historical Socrates as represented by Xenophon.

Hellenes and Barbarians. The mention of Hellenes and Barbarians (209 E) as equal to each other also places the *Symposium* above the *Gorgias*, and on a level with the *Cratylus*.

Relation to Isocrates' Busiris made probable by Teichmüller; this confirms our conclusions. Teichmüller (I. p. 120) made it very probable that the Symposium must be later than Isocrates' Busiris, in which we read (222 c) that nobody except Polycrates had ever asserted that Alcibiades had been a disciple of Socrates. This could not be said by Isocrates if he knew Plato's Symposium, in which the near relation and friendship between Alcibiades and Socrates is clearly represented. Teichmüller infers that Plato in introducing Alcibiades answered Isocrates' pretension to place Alcibiades above Socrates, and at the same time defended Alcibiades against the calumnious attacks of Lysias. The Busiris was written, according to Blass, some years after 391, and this would well agree with the admitted date of the Symposium, 385 B.C.

Relation to earlier dialogues generally admitted. But Phaedo and Phaedrus cannot be earlier than the Symposium.

We need no further evidence as to the priority of the Cratylus, Gorgias, and all Socratic dialogues, because these have generally been admitted to be earlier than the Symposium. The proof that some other dialogues, as the Phaedo and Phaedrus, which were also held by many critics to be earlier than the Symposium, are later, will be given when we come to deal with the date of each of them. For the present we may admit as certain, that the Symposium was written about 385 B.C., and after the Cratylus, Gorgias, Euthydemus, Meno, Protagoras, and all smaller dialogues. This result is not new; it is one of the few points of general agreement among writers on Plato. The comparison of logical contents has confirmed it, and also the style of the Symposium (see above, p. 169) is clearly intermediate between Gorgias and Phaedo.

III. The Phaedo.

(Relative affinity to the latest group, measured on the Laws as unity, = 0.21; see above, p. 170.)

The Phaedo is less artistically simple than the Symposium; it contains many threads of argument united Phaedo with such skill that there is room for various opinions has been as to the chief purpose of the author and the main subject of his work. The dialogue has been regarded as an historical account of the death of Socrates,211 as a treatise on the immortality of the soul,212 as the poetical tragedy announced at the end of the Symposium, 213 as a general psychology,214 as an ideal picture of the true philosopher.²¹⁵ and even as a treatise on the underground rivers.216 There is some truth in all these assumptions if not taken absolutely; but for our present purpose the Phaedo deserves particular attention as containing the theoretical substantiation of Plato's first logical theory. We have seen in earlier works many allusions to logical problems discussed by Plato with his pupils. In the Cratylus the subsidiary problem of the relation between thought and language led to the hypothesis of an existent substance of things, different not only from all appearances, but also from all possible expression in human posium.

preted in different ways, but is chiefly important as the first attempt to sustain by logical argument the theory of ideas. which had been only poetically represented in the Sum-

211 This exceedingly improbable opinion has been sustained in recent times by T. Bergk (Griechische Literaturgeschichte, 4ter Bd. Berlin 1887).

214 Plutarch (Moral, 120 E) quotes the Phaedo by the title περί ψυχής, which appears also in the manuscripts.

sie This would result from a doubtful interpretation of Varro, de lingua latina, lib. VII. cap. iii. 88.

²¹² This is the ordinary view, represented in our century especially by Steinhart.

²¹⁸ The well-known passage, Symp. 223 D, has been interpreted as referring to the Symposium as comedy, and to the Phaedo as tragedy.

²¹⁵ Schleiermacher believed the Phaedo and Symposium to be the continuation of the Politicus, and to constitute between them the definition of the philosopher which had been promised in Sophistes 217 A B and Politicus 257 A. This is impossible, the Politicus being much later than both Symposium and Phaedo.

Beauty was the first idea. extended in the Phaedo to a system of ideas.

In the Symposium one aspect of such a language. substance was displayed as an ecstatic vision insufficiently pictured by the witness who experienced it but found himself unable to give expression in words to this unique and marvellous revelation. The first substance thus discovered by Plato was Beauty, bearing some relation to the Good, or ethical Beauty (Symp. 205 Ε: ὁ δ' ἐμὸς λόγος ούτε ημίσεος φησιν είναι τον έρωτα ούτε όλου, έαν μη τυγχάνη γέ που, ω έταιρε, άγαθον δν. 212 Α: όρωντι ο όρατον το καλόν, τίκτειν οὐκ εἴδωλα ἀρετῆς, ἄτε οὐκ εἰδώλου ἐφαπτομένω, άλλ' άληθη, άτε τοῦ άληθοῦς ἐφαπτομένω). Beauty, called already in the Symposium the Good, Truth, or reality, appeared in the first moment, suddenly raised above all human standards, as the only substance of the Soon, however, growing accustomed to the ideal existence of Beauty, he generalised this experience, extending it to other notions. This he does for his readers first in the Phaedo. He builds a system of ideas and gives an account of the way leading to his idealism; so resuming the inquiry commenced in the Cratylus.

Value of sense perceptions investigated. They are found to be misleading.

After refuting all attempts to find truth in words, he discusses the value of knowledge gained by sense perception, and held by ordinary 'common sense' to be the most certain of all. He at once distinguishes sight and hearing as the best of all senses (65 B), but finds that even these give us no correct notions, as has been already recognised even by the poets (65 B: of $\pi o i \eta \tau a \lambda \eta \mu \hat{\nu} d \epsilon \lambda \theta \rho \nu \lambda o \hat{\nu} \sigma \iota \nu$), and, we might add, by such philosophical predecessors of Plato as Heraclitus and Parmenides.

Ideas perceived by the soul alone without help of the body. They are more evi-

As in the Symposium the ecstatic vision of Beauty was independent of the senses and different from any material representation, so now in the Phaedo appear many other ideal substances, perceived by the soul alone, without help of the body (65 B C: ή ψυχή . . . ὅταν μετὰ τοῦ σώματος ἐπιχειρῆ τι σκοπείν, δήλον ὅτι τότε ἐξαπατάται ὑπ' αὐτοῦ). This is done through reasoning (65 c: ἐν τῶ λογίζεσθαι) in moments when neither sight, nor hearing,

nor bodily pain or pleasure affect us, and when we feel as if dent to we had left the body in order to approach true being (65 c: λογίζεται . . . κάλλιστα, όταν . . . ἐωσα γαίρειν τὸ σωμα, καὶ καθ' όσον δύναται μη κοινωνοῦσα αὐτῷ μηδ' ἀπτομένη ορέγηται τοῦ ὄντος). Such substances as ideal Justice, or Beauty, Health, or Power, have an existence more evident to our reason than is the existence of particular things to our senses (65 D), though we can neither grasp them with our sight nor any other sense. We know them best by pure thinking (65 Ε: δε αν μάλιστα ήμων καὶ ἀκριβέστατα παρασκευάσηται αὐτὸ ξκαστον διανοηθήναι περὶ οὖ σκοπεί, ούτος αν έγγύτατα ιοι του γνώναι εκαστον), emancipated from the influence of sense perception (65 Ε: διανοία . . . μετά τοῦ λογισμοῦ . . . μήτε τὴν ὄψιν παρατιθέμενος ἐν τῷ διανοείσθαι μήτε τινὰ ἄλλην αἴσθησιν).

reason than material things to the senses.

Human passions, illness, and physical necessities or desires put obstacles in our way to knowledge (66 B: μυρίας . . . ἀσχολίας παρέχει τὸ σῶμα), and lead to wars or other conflicts (65 c). Thence Plato infers that ideal knowledge will be attainable for us chiefly after death (66 E), and that in earthly life our only way to approach truth is to limit the activity of senses to what is indispensable (67 A: ἐν ιν αν ζώμεν . . . ἐγγυτάτω ἐσόμεθα τοῦ είδέναι, εαν ο τι μάλιστα μηδεν ομιλώμεν τῷ σώματι). Only the pure soul can reach pure truth (67 B: μη καθαρώ καθαροῦ ἐφάπτεσθαι μὴ οὐ θεμιτὸν ἢ). We can learn nothing from our senses, because our soul possesses eternal innate wisdom, and all our learning consists in remembering what we knew before this life (72 E: μάθησις οὐκ ἄλλο τι ἡ ἀνάμνησις τυγγάνει οὖσα . . . ἀνάγκη που ήμας εν προτέρφ τινὶ χρόνφ μεμαθηκέναι α νυν αναμιμνησκόμεθα). The reminiscence depends upon similarity or dissimilarity of absolute ideas with the concrete objects of earthly experience (74 A: συμβαίνει την ανάμνησιν είναι μέν ἀφ' ὁμοίων, είναι δὲ καὶ ἀπ' ἀνομοίων). Still we notice in every case the difference between a perfect idea and the sensible experience which reminds us of this idea (74 A:

Body puts obstacles in our way to knowledge. Ideal knowledge expected after death. The pure soul reaches nure truth, and possessed it before entering the body.

άναγκαίον τόδε προσπάσγειν, έννοείν είτε τι έλλείπει τοῦτο κατά την ομοιότητα είτε μη εκείνου οδ άνεμνήσθη).

Here Plato introduces a classical example of this

Difference between idea and particulars illustrated by a mathematical example. There is no material equality in the world. though it is easy to nnderstand ideal equality.

radical difference between an idea and sensible particulars: an example which has lost nothing of its logical importance up to the present time, and which also shows a far-reaching apprehension of the sensible world. example he finds not in the distance between a concrete work of art and the artist's ideal, but in the perfection of a mathematical notion. He knows equality as the basis of all mathematical reasoning, and dares to assert that there is no such equality in the physical world. We know in our times, after many difficult measurements, that no one grain of sand is equal to another, nor a drop of water to another drop. But Plato had no microscopes and micrometers at his disposal, and it was a deep insight into the nature of physical phenomena that allowed him such an audacious generalisation against the evidence of his senses. He quotes as examples stones and pieces of wood, which only appear to be equal (74 B), but are He certainly knew physical objects which, according to all his means of observation, were really equal to each other, as for instance two stars of the same size and brilliancy, two wings of a small insect, or even two coins This truth of the same mint. He could not ascertain the small existing differences between such objects by exact measurements and observations as we are enabled to do now: he had not arrived at his conviction of the impossibility of physical equality by Socratic induction. It was for him a knowledge a priori, quite as much as the knowledge of moral ideas. His reasoning was not built upon attempts to establish differences between apparently equal objects. He knew beforehand that the idea of equality was too perfect to be realised in the physical world. And this a priori knowledge of Plato has been confirmed by the experience of all the generations which have come after him

was not gained by induction or experiment, but appears to be the result of pure thought.

Plato had never alluded in his earlier writings to that A process difference between idea and appearance. In the Cratulus he mentioned things corresponding to the notion formed of them, and even derived general notions from particular In the Symposium he reached the sight of absolute Beauty by progressive generalisations which Phaedo. might be described as a continuation of Socratic induction. It is only in the Phaedo that he undertakes to construct a knowledge entirely independent of concrete particulars, and shows us the first model of such absolute ideas in the mathematical notion of equality, not derived from experience.

not observable in earlier writings than the

We have already seen in the Meno the theory of tran- Even in scendental knowledge exemplified through a psychological experiment. But in the Meno there is no mention of a difference between ideal and physical equality. figures were assumed to be equal, and their equality known. Here in the Phaedo we meet the assertion that there are no two equal objects in this life's experience, and that therefore all notion of equality is older than the present sense per-The apparent equality of two material objects life. approaches indefinitely the limit of absolute equality (75 A: δρέγεται πάντα ταῦτα είναι οίον τὸ ἴσον, ἔχει δὲ ἐνδεεστέρωs), and offers us the only opportunity of recalling the notion of absolute equality (75 A: ὁμολογοῦμεν, μή άλλοθεν αὐτὸ ἐννενοηκέναι . . . άλλ' ἢ ἐκ τοῦ ἰδεῖν ἢ ἄψασθαι η ἐκ τινος ἄλλης τῶν αἰσθήσεων). This reluctant concession leaves a certain importance to the activity of the despised Without their perceptions we could not find an opportunity of remembering general ideas as the object of our transcendental knowledge. But once remembered, absolute equality is known to be radically different from pearances any equality observed, and cannot therefore proceed from of eternal particular instances of approximative equality. principle is extended to other ideas, not only of mathematical relation but also of justice, holiness, and everything that is predicated of particulars (75 D: περὶ ἀπάντων ols

the Meno ideal equality is not thus distinguished. Still. ception remains a necessary condition for our training in the intuition of ideas. We are reminded by concrete ap-This ideas, which known before our birth. ἐπισφραγιζόμεθα τὸ δ ἔστι). All these ideas must have been known before we began to see, to hear, and to receive other impressions of our senses (75 B: πρὸ τοῦ ἄρα ἄρξασθαι ήμας όραν και ακούειν και τάλλα αισθάνεσθαι τυχείν έδει που είληφότας έπιστήμην αὐτοῦ τοῦ ἴσου ὅ τι ἔστιν) in order to enable us to refer every sense perception to such eternal ideas (75 B: τὰ ἐκ τῶν αἰσθήσεων ἴσα ἐκεῖσε ἀνοίσειν, ὅτι προθυμείται μεν πάντα τοιαύτα είναι οίον εκείνο, έστι δε αὐτοῦ φαυλότερα). These ideas have an eternal existence, independent of the changes of sensible things. Beauty and similar ideas have the most real kind of existence, much more than any material appearances (77 A: οὐκ έχω έγωγε ούδεν ούτω μοι έναργες δυ ώς τούτο, το πάντα τὰ τοιαθτ' είναι ώς οδόν τε μάλιστα, καλόν τε καὶ ἀγαθὸν καὶ τάλλα πάντα à σὺ νῦν δὴ ἔλεγες). Only through these ideas do we begin to understand the outward world (76 D: ἔστι . . . πᾶσα ή τοιαύτη οὐσία, καὶ ἐπὶ ταύτην τὰ ἐκ τῶν αἰσθήσεων πάντα ἀναφέρομεν).

Ideas
more real
than
material
objects,
and they
explain
them.

Permanence of ideas a condition of unchangeable knowledge. Everything that exists belongs to one of these two kinds (79 A: θῶμεν δύο εἴδη τῶν ὄντων): the visible material world, continuously changing, and the invisible ideal world, eternally the same, consisting of ideas and souls. No permanent and durable knowledge can refer to any but eternal objects, ideas without change. When the soul investigates ideas, certainty and knowledge are attained, and this we call activity of reason (79 D: περὶ ἐκεῖνα ἀεὶ κατὰ ταὐτὰ ὡσαύτως ἔχει, ἄτε τοιούτων ἐφαπτομένη·καὶ τοῦτο αὐτῆς τὸ πάθημα φρόνησις κέκληται). Such an activity implies happiness, and frees us from error and all human sufferings (81 A).

Privileges of philosophers who become equal to gods. And far more than even this, the victory over illusions of the senses leads a philosopher to become after death equal to the gods (82 c: εἰς θεῶν γένος μὴ φιλοσοφήσαντι καὶ παντελῶς καθαρῷ ἀπιόντι οὐ θέμις ἀφικνεῖσθαι ἀλλ' ἡ τῷ φιλομαθεῖ). A philosopher holds to be true only what he knows independently of the senses, through the pure activity of his soul, which gives an immediate, intuitive

knowledge of ideas (83 A: ή φιλοσοφία . . . την ψυγην παραμυθείται . . . παρακελευομένη πιστεύειν μηδενί άλλω άλλ' η αυτήν αυτή, ό τι αν νοήση αυτή καθ' αυτήν αυτό καθ' αύτὸ τῶν ὄντων).

Here we read for the first time about a science of Necessity thought or logic (90 B: $\dot{\eta}$ $\pi \epsilon \rho \lambda$ $\tau o \nu s$ $\lambda o \nu v \nu s$ $\tau \epsilon \nu v \nu \eta$), which is indispensable in order to preserve us from utter scepticism. He who trusts his own thoughts without an objective logic will often change his opinion, and this will lead him to a general distrust of human thought (90 c: τελευτώντες οἴονται . . . κατανενοηκέναι μόνοι ὅτι οὖτε τών πραγμάτων οὐδενὸς οὐδὲν ὑγιὲς οὐδὲ βέβαιον οὔτε τῶν λόγων). Such men believe themselves to have discovered that there is no truth, and that any and every opinion may be successfully defended by arguments among which none is decisive. This is an abnormal state of mind resulting from over-confidence, and similar to the misanthropy born of trusting men without knowing how to distinguish the good from the bad (89 D). If, with this unlimited confidence, a man should be deceived by those on whom he relied, he will fall straight into the contrary extreme, and cease to put any trust in his fellows. To this wrong conclusion he is brought by his ignorance of psychology (89 Ε : ἄνευ τέχνης της περί τανθρώπεια), and in like manner ignorance of logic may lead to a general distrust of human reason (90 cd: οἰκτρὸν ἄν εἴη τὸ πάθος, εἰ ὄντος δή τινος άληθοῦς καὶ βεβαίου λόγου καὶ δυνατοῦ κατανοήσαι, ἔπειτα . . . μη ἐαυτόν τις αἰτιώτο μηδὲ την ἑαυτοῦ ἀτεχνίαν, άλλα . . . ἐπὶ τοὺς λόγους ἀφ' ἐαυτοῦ τὴν αἰτίαν ἀπώσαιτο . . . τῶν δὲ ὄντων τῆς ἀληθείας τε καὶ ἐπιστήμης στερηθείη). In this case they lose, by their own fault, the opportunity of knowing Truth and Being, and have no right to accuse human reason generally of imperfection. Plato himself is certain that human reason possesses the power of an infallible knowledge, and that we owe our errors, not to logic. the weakness of our reason, but to the influence of the senses.

of logic insisted upon. Origin of scepticism in the want of logic. Scepticism compared with misanthropy.

Ignorance of logic similar to ignorance of psychology. Logic unjustly accused. Power of human reason to attain truth by means of

Final causes esteemed above mechanical causation.

Ultimate aim of Being produces unity of knowledge and existence.

To find absolute Truth our thought must be pure thought, and we must take care not to trust other explanations of reality than those based upon an understanding of the ideal aim of everything (97 c: εἰ οὖν τις βούλοιτο την αιτίαν εύρειν περί έκάστου . . . τοῦτο δείν περί αὐτοῦ εύρειν, όπη βέλτιστον αὐτώ ἐστιν ἡ είναι ἡ ἄλλο ότιοῦν πάσχειν ἡ ποιείν). This ideal cause is esteemed by Plato very much above all mechanical causation, which for him is no causation at all, but mere succession of events, or at most a necessary condition of real causation (99 B: ἄλλο μέν τί ἐστι τὸ αἴτιον τῶ ὄντι, ἄλλο δὲ ἐκεῖνο ἄνευ οὖ τὸ αἴτιον οὐκ ἄν ποτ' εἴη αἴτιον). Plato rises here to the summit of his new idealistic metaphysics, despising all mechanical explanation of Being as quite unsatisfactory and criticising his great predecessor Anaxagoras (98 B-E) for not having understood the importance of final The only true cause appears to be that divine power which leads everything to the best, and according to the aims of the whole as well as of all parts (99 c: την τοῦ ώς οδόν τε βέλτιστα αὐτὰ τεθήναι δύναμιν . . . δαιμονίαν ἰσχύν).

As thought reflects reality, we can investigate reality in our thoughts. But the immediate knowledge of this ideal cause is beyond the scope of mankind, and Plato seeks an indirect way in order to find out the causes of things (99 c: ἐγὼ μὲν οὖν τῆς τοιαύτης αἰτίας, ὅπη ποτὰ ἔχει, μαθητὴς ὁτουοῦν ἤδιστ' ἀν γενοίμην ἐπειδὴ δὰ ταύτης ἐστερήθην καὶ οὖτ' αὐτὸς εὐρεῖν οὖτε παρ' ἄλλου μαθεῖν οἶός τε ἐγενόμην, τὸν δεύτερον πλοῦν ἐπὶ τὴν τῆς αἰτίας ζήτησιν πεπραγμάτευμαι). This second-best choice is based on the reflection that human thought is, as it were, an image of reality, and that exact knowledge of thought leads to a knowledge of truth (99 E: ἔδοξε δή μοι χρῆναι εἰς τοὺς λόγους καταφυγόντα ἐν ἐκείνοις σκοπεῖν τῶν ὅντων τὴν ἀλήθειαν), just as we can observe the image of the sun reflected in a well, thus avoiding the injury to our eyes attendant upon looking at the sun itself.

Once on this path Plato soon recognised that thought

is more than a mere image of Being (100 A: οὐ πάνυ Thought συγχωρώ τὸν ἐν τοῖς λόγοις σκοπούμενον τὰ ὅντα ἐν εἰκόσι μᾶλλον σκοπεῖν ἡ τὸν ἐν τοῖς ἔργοις), as he had explained it in the Symposium. He now applied the hypothetical method proposed in the Meno, seeking for the safest hypothesis on which he could rely, admitting as true everything in agreement with, and rejecting as false highest anything contradictory to this fundamental proposition (100 A: ὑποθέμενος ἐκάστοτε λόγον δν αν κρίνω ἐρρωμενέστατον είναι, α μεν αν μοι δοκή τούτφ συμφωνείν, τίθημι ώς $\dot{a}\lambda\eta\theta\hat{\eta}$ $\ddot{b}\nu\tau a$, \hat{a} δ' $\hat{a}\nu$ $\mu\dot{\eta}$, $\dot{\omega}s$ $o\dot{\nu}\kappa$ $\dot{a}\lambda\eta\theta\hat{\eta}$). As such a fundamental hypothesis he proposes to accept the independent existence of Beauty as set forth in the Symposium, and of ideas. also of other ideas (100 B: ὑποθέμενος είναί τι καλὸν αὐτὸ καθ' αύτὸ καὶ ἀγαθὸν καὶ μέγα καὶ τάλλα πάντα). calls here, nothing new (100 B: οὐδὲν καινόν), but already frequently spoken of. It would be, however, an error to infer that another written exposition of the theory of ideas preceded, besides the first initiation in the Symposium. If the Platonic Socrates asserts that he constantly repeats Apparent the same truth in other as well as in the present conversation (100 B: ἀεὶ καὶ ἄλλοτε καὶ ἐν τῷ παρεληλυθότι λόγω), this is a rhetorical artifice by which, on the one hand, Plato brings his new ideas into close relation with the old Socratic notions as subsisting still in the Euthydemus (301 A) and Cratylus (439 D), while on the other hand he earlier exrefers to conversations with his pupils which may have been suggested by the argument of the Symposium. Among the literary works of Plato none can be thought of as referred to in this passage of the Phaedo, because none contains a more elementary and fundamental explanation of the theory of ideas, the Phaedrus and Republic being undoubtedly later, as will be seen from their psychology, and as has been already made evident by their style. An earlier written exposition of this theory would have rendered superfluous the painstaking didactic tone of the Phaedo, and the difficulty of understanding expected by

allusion to earlier expositions explained. The only position in the Symposium.

the Platonic Socrates, and admitted by his hearers (100 A: β ούλομαι δέ σοι σαφέστερον εἰπεῖν ἃ λέγω· οἶμαι γάρ σε νῦν οὖ μανθάνειν—οὖ μὰ τὸν Δία, ἔφη ὁ Κέβης, οὖ σφόδρα). This reminds us of the admitted obscurity of the speech of Diotima in the Symposium, and gives the impression of a first attempt at a written account of the new theory.

Relation between Phaedo and Symposium in the theory of ideas.

The theory as it stands in the Phaedo is a generalisation of the esthetic experience related in the Symposium. Particulars are what they seem to us to be, through their participation in the idea, and not only in the idea of Beauty but also in the ideas of all other general notions. The term μετέγειν used here (100 c: φαίνεται γάρ μοι, εἴ τί έστιν άλλο καλόν, οὐδε δι' εν άλλο καλον είναι ή διότι μετέγει ἐκείνου τοῦ καλοῦ · καὶ πάντα δὴ οὕτως λέγω), as in the Symposium, is already felt to be not quite sufficient, and is supplemented by other terms, παρουσία and κοινωνία (100 D: υψκ ἄλλο τι ποιεί αὐτὸ καλὸν ἡ ἡ ἐκείνου τοῦ καλοῦ είτε παρουσία είτε κοινωνία . . . οὐ γὰρ ἔτι τοῦτο διισχυρίζομαι, άλλ' ὅτι τῷ καλῷ τὰ καλὰ γίγνεται καλά). The idea is present in the particulars, or is shared by them, this makes no difference for Plato: the only expression of his hypothesis which he believes to be perfectly certain is that beautiful things become beautiful through Beauty, or owe their particular beauty to the general idea. relation between idea and particulars is formally similar to the relation between a Socratic notion and the particulars; as expressed already in the Euthyphro (6 E: είδος, 🕉 πάντα τὰ ὅσια ὅσιά ἐστιν . . . μιᾳ ἰδέα τά τε ἀνόσια ἀνόσια καὶ τὰ ὅσια ὅσια). But the Socratic notion was immanent (Euthyph. 5 D: ταὐτόν ἐστιν ἐν πάση πράξει τὸ όσιον αὐτὸ αὑτῷ, καὶ τὸ ἀνόσιον αὖ τοῦ μὲν ὁσίου παντὸς έναντίου, αὐτὸ δὲ αὐτῷ δμοιον καὶ ἔχον μίαν τινὰ ἰδέαν πᾶν ο τί περ αν μέλλη ἀνόσιον είναι), found in the concrete things as their point of similarity, while the Platonic idea is self-existent, independent of particulars, perceived by pure reason against all illusions of the senses. More-

Relation between idea and particulars similar to that between a general notion and particulars. over, the terms elos and idéa, which were freely used to Use of designate general notions in earlier dialogues, up to the terms. Gorgias and Cratylus, preserve generally the same meaning in the Symposium and Phaedo, 217 while the transcendental ideas are chiefly designated by the neuter of the adjective, sometimes with such determinations as exervo the idea. (Symp. 210 E, Phaedo 103 c) or αὐτὸ καθ' αὑτό (Symp. 211 B, Phaedo 100 B) and by the verb elval and its deriva-The direct and constant use of ellos or idéa to designate a transcendental idea belongs to a somewhat later stage of Plato's logic. In the Symposium and Phaedo he still hesitates, and this hesitation produces great variety of terms for the peculiar relation between idea and particulars.²¹⁸ He says expressly that he does not insist upon any of these terms, 219 and that the only thing he is sure of is the priority of the idea, or that the given idea

Variety of terms for the ideas. Priority of

217 ellos as well as idéa means shape, form, or appearance in such passages as Symp. 189 E, 196 A, 204 C, 215 B; Phaedo 73 A, 104 D, 108 D, 109 B. The meaning of a Socratic species or notion appears in Symp. 205 BD; Phaedo 91 D, 100 B, &c. Campbell has shown in §§ 24-32 of his essay on Plato's use of language (Plato's Republic, vol. ii pp. 294-305) that both words have been used frequently by Plato in the same meaning as by earlier writers besides the new applications, chiefly illustrated from later dialogues. In the formula το ἐπ' είδει καλον (Symp. 210 B) we also miss the specific Platonic use of eldos. The possible identity of eldos and the absolute idea seems to be admitted in the formula: είναί τι εκαστον τών But here also the « ton mean ethical notions of which substantial existence is predicated. Only Phaedo 104 B idéa and 104 c eton might be equivalent to the Platonic 'ideas.'

218 Besides μετέχειν, παρουσία, κοινωνία we read: μεταλαμβάνειν 102 B, προσδέχεσθαι 102 D, προσιέναι 102 E, 103 D, δέχεσθαι 102 E, 103 D, ενείναι 103 B, μετάσχεσις 101 C.

219 Phaedo 100 p: οὐ γὰρ ἔτι τοῦτο διισχυρίζομαι has been interpreted as a reference to an earlier different opinion by Dümmler (Akademika, p. 204), P. Natorp (Philosophische Monatshefte, vol. xxvi. p. 467), and Pfleiderer (p. 395). But this interpretation is based upon the assumption that Plato wrote about the theory of ideas before the Phaedo. If the Phaedo, as results from the present inquiry, is the first methodic exposition of Plato's theory of ideas, then 'ου γάρ ἔτι' does not signify 'no longer,' but 'not further,' 'not moreover.' The whole phrase would then mean: I am only sure that beautiful things are beautiful through Beauty, but I do not go so far as to affirm anything definitively about the exact manner in which this occurs.

is the cause of the corresponding quality in each particular thing in which it is recognised.

On this fundamental hypothesis, according to Plato, a

Logical rule as to the judgment on an hypothesis, and its consequences.

consistent system of science can be built up (101 D: έγόμενος έκείνου τοῦ ἀσφαλοῦς τῆς ὑποθέσεως). develops the hypothetical method given in the Meno, and recommends his disciples always to distinguish between an hypothesis and the consequences drawn from it. skilful discussion, the agreement of all consequences with each other must precede any inquiry as to the truth of the hypothesis on which the consequences depend (101 D: εἰ δέ τις αὐτης της ὑποθέσεως ἔφοιτο, γαίρειν έφης αν και ουκ αποκρίναιο, έως αν τα απ' έκείνης ορμηθέντα σκέψαιο, εί σοι άλλήλοις συμφωνεί ή διαφωνεί). He advises rising from one hypothesis to another until irrefragable transcendental axioms are reached, which have no further need of demonstration (101 D: ἐπειδή δὲ ἐκείνης αὐτῆς δέοι σε διδόναι λόγον, ώσαύτως άν διδοίης, άλλην αὖ ὑπόθεσιν ὑποθέμενος, ἥτις τῶν ἄνωθεν βελτίστη φαίνοιτο, έως ἐπί τι ἰκανὸν ἐλθοις). He warns us against coupling illogically (101 Ε: ωσπερ οἱ ἀντιλογικοί), in one and the same discussion, arguments for or against the hypothesis itself with arguments for or against the derived consequences (101 c: αμα οὐκ αν φύροις περί τε της άρχης διαλεγόμενος και των έξ έκείνης ώρμημένων, είπερ βούλοιό τι των δυτων εύρειν).

Progressive generalisation up to a highest principle.

Supposed polemical reference.

Hypothetical method extended, and defended against unknown This exhortation to a methodic investigation is aimed, as Dümmler thinks, against Antisthenes, and is emphatically assented to by Cebes and Simmias simultaneously (102 A), and by Echecrates who hears Phaedo's report of the conversation. Phaedo adds that to all present, even to those who had the least understanding of philosophy, it seemed to be wonderfully clearly expressed (102 A: εἶπερ εἶ τῶν φιλοσόφων . . . θαυμαστῶς δοκεῖ ὡς ἐναργῶς τῷ καὶ σμικρὸν νοῦν ἔχοντι . . . πᾶσι τοῖς παροῦσιν ἔδοξεν . . . καὶ γὰρ ἡμῶν τοῖς ἀποῦσι, νῦν δὲ ἀκούουσιν). This insistent asseveration of the importance of the logical

rule—to distinguish the consecutive steps of each argu- adverment, and to require internal consistency before criti- saries. cising the foundations of a course of reasoning, shows that Plato is introducing a new method (μέθοδος, 79 E, 97 B), with full consciousness of its bearings. This new method is generalised from the inductive process by which, in the Progress Symposium, he reached his vision of absolute Beauty. As from hyhe then proceeded from particulars to the idea, he now wishes through hypothetical argumentation to reach absolute certainty. Every successive hypothesis must be 'better' or logically more evident than the preceding, circular until by such approximations the goal is attained—namely, reasoning. certainty.

pothesis to knowledge. avoiding

Even then he will not indulge in the self-conceit of those who are delighted with their own circular reasonings (101 Ε: οἱ ἀντιλογικοὶ . . . ἱκανοὶ ὑπὸ σοφίας ὁμοῦ πάντα κυκώντες όμως αὐτοὶ αὐτοῖς ἀρέσκειν). The true philosopher First prin is obliged to examine again and again even the highest ciples regeneralisations or first principles (107 Β: καὶ τὰς ὑποθέσεις examined. τας πρώτας, και εί πισται υμίν είσιν, ομως επισκεπτέα σαφέστερον · . . . καθ' δσον δυνατόν μάλιστ' άνθρώπω) in order to advance as far as human reason may.

Plato acknowledges that his own highest hypothesis, Probable when he wrote the *Phaedo*, was the independent existence of ideas as true substances, always the same, eternal, divine, simple, and representing the highest reality of Being. Were it not for the repeated assertion of the independence of the ideas, we might identify them with tation. general notions. We have no clear indication either in the Phaedo or in the Symposium of any distinction between our subjective notions and the corresponding transcendental ideas. Everything confirms our supposition that Plato, at the time of writing the Phaedo, as well as when he wrote the Symposium, believed it to be possible for the human soul to know ideas as they are, and in such absolute intuition the general notion would be identical with the idea, while the idea remains equally the same

identity of ideas and their subjective represenboth when manifest in us and outside of us (103 Β: αὐτὸ τὸ ἐναντίον ἑαυτῷ ἐναντίον οὐκ ἄν ποτε γένοιτο, οὕτε τὸ ἐν ἡμῖν οὕτε τὸ ἐν τῆ φύσει).

Intuition of ideas dispenses with experience.

Law of contradiction.

The logical consequence of this doctrine was the power of reason to acquire all truth accessible to mankind by pure intuition, by contemplative meditation without or almost without external experience. In other words, our reason is able to discover the nature of things by intense reflection on the nature of her own ideas, which ideas are common both to human reason and to every other possible reason of any superior being here called God. The logical side of this doctrine culminates in the law of contradiction, expressed here as one of the chief arguments demonstrating the existence of ideas (102 E: τὸ σμικρὸν οὐκ ἐθέλει ποτὲ μέγα γίγνεσθαι οὐδὲ εἶναι, οὐδ᾽ ἄλλο οὐδὲν τῶν ἐναντίων ἔτι δν ὅπερ ἢν ἄμα τοὐναντίον γίγνεσθαί τε καὶ εἶναι). Each idea is only what it is, and, therefore, perfectly simple (μονοειδές, 83 E).

Solution of the problem proposed in the Cratylus. Stability and independence of ideas.

We see that Plato in the Phaedo gave his solution of the problem proposed in the Cratylus, and definitively decided against Heracliteanism. In the Cratylus he recognised the extreme difficulty of the problem and announced a further inquiry; in the Phaedo he communicates the results of this inquiry, postulating not only the stability of notions, already acknowledged in the Cratylus, but their independence of human intelligence. He goes so far now as to deny every process of becoming in the world. or at least to decline any explanation of changes (97 Β: οὐδέ γε δι' δ τι εν γίγνεται ώς επίσταμαι έτι πείθω εμαυτόν, οὐδ' άλλο οὐδὲν ἐνὶ λόγω δι' ὅ τι γίγνεται ἡ ἀπόλλυται ἡ ἔστι, κατὰ τοῦτον τὸν τρόπον τῆς μεθόδου). Two unities added to each other cannot become two: it is not the addition which could produce a new idea. Addition is only the subjective side of the eternal relation subsisting independently of our reason between unity and the idea of two. explanation of all apparent changes through eternal relations between immutable ideas is the result of the absolute

Relation between ideas. reality attributed to ideas and opposed to the phenomenal appearance of all material things.

The Phaedo brings Plato's Idealism to its highest The point and contains a conscious representation of all consequences deriving from the fundamental hypothesis sought for in the Cratylus, perceived in the Symposium, and demonstrated here, so far as it could be, for Plato's followers. We shall meet this theory in later works. while there is no clear trace of it in works that were ism. certainly written before the Phaedo.

The importance of the Phaedo for the development of Plato's logic is increased by the circumstance that the authenticity of this dialogue has passed unquestioned, even by such sceptical critics as Ast and Schaarschmidt. It has been advanced 220 that the Stoic Panaetius in the its imporsecond century B.C. doubted the authenticity of the tance. Phaedo, but Zeller has clearly shown the untrustworthiness and even the contradictoriness of the testimonies adduced in favour of that assumption—the first mention of these pretended doubts occurring some centuries after the death of Panaetius and betraying a complete ignorance of Panaetius as well as of the reason of his imputed scepticism. The Phaedo has been so frequently quoted by Greek and Latin writers that we must admit that this work was generally regarded as undoubtedly authentic.

The extreme idealism here professed has provoked severe criticisms, as for instance those of Crawford 221 in the eighteenth and of Prantl 222 in the present century. But even these criticisms show that, if Plato's idealism was mistaken, such mistakes can be made only by a

lasting importance in the history of human thought.

philosopher of genius, and they are indispensable for the progress of philosophy, just as many failures of expeditions undertaken with the aim of discovering the sources of the Nile were indispensable for the progress of geography. Idealism is one obvious solution of the metaphysical problem, and it was necessary to follow out all the consequences of this solution in order to decide upon its value. In the Phaedo Plato is still struggling against some consequences of his idealism. His love of the religious traditions about the immortality of the soul, as set forth in the Meno and Gorgias, and indirectly confirmed in the Euthydemus and Cratylus, is really not quite consistent with the doctrine of idealism, and though we have no direct evidence whether he was aware of this inconsistency, we see that in the Symposium, together with the first glimpse of eternal ideas, there appears almost a substitution of immortal influence for the immortality of the person taught in the Gorgias. Now in the Phaedo the avowed purpose of the Platonic Socrates is a demonstration of immortality, and he connects this demonstration with the exposition of the theory of ideas, which really might have impaired the religious belief in immortality. But if we examine the arguments in the Phaedo, we see that those from the beginning up to the objection of Cebes (87 A) prove but meant only the persistence of the individual soul for some time after death, not for all time. The remaining arguments refer more to the idea of soul than to the individual soul. though they seem intended as a defence of personal immortality. Archer Hind 223 argued this question against Hegel and Teichmüller, and made it very probable that Plato in writing the Phaedo still really believed in a prolongation of individual existence after death, without any suspicion of inconsistency. If we look at the final conversation of Socrates with Crito (115 D: ἐπειδὰν πίω τὸ

demonstration of immortality. Proofs not entirely sufficient. seriously. though consistent idealism would abolish individual immortality.

New

²²³ The Phaedo of Plato, edited by R. D. Archer Hind, London 1883, pp. 18-26.

φάρμακον, οὐκέτι ὑμῖν παραμενῶ, ἀλλ' οἰγήσομαι ἀπιών . . .) we must admit that Plato perfectly understood the consequences of personal immortality and believed them. The inconsistency between immortality and idealism arises only if by immortality is meant, according to our modern notions, absolute eternity of the soul, while an indeterminate continuation of the soul's existence after death is not inconsistent with idealism. It is difficult to doubt that Plato meant his arguments as sufficient to establish individual immortality, because his conclusion does not admit of another interpretation (107 A: παντὸς μαλλον άρα ψυχη άθάνατον καὶ άνώλεθρον καὶ τῷ ὅντι ἔσονται ήμῶν αὶ ψυγαὶ ἐν "Αιδου). It is also a natural psychological consequence of the profound dissatisfaction with the present conditions of life, manifested by Plato in the Phaedo, that he could not easily throw off his hopes of a better state, and of a deliverance from physical limitations.

The physical theory of the Phaedo, representing the Physical insignificance of the world accessible to our knowledge as compared with a wider world even physically more perfect, confirms the place assigned to the Phaedo in the development of Plato's thought. Here he appears no longer as an Athenian, nor as a Greek, but rises even above the standpoint of international equality between Sum-Hellene and Barbarian attained in the Cratylus. In posium. the Phaedo there speaks a philosopher whose interests are not limited to the earth, but extend over the universe, though maintaining still the position of the earth at the centre, in conformity with the traditional religious beliefs which Plato afterwards discarded.

The position of the Phaedo after the Symposium is Some evident from all the above comparisons, but additional evidence is not wanting as to the relation between these two dialogues, a relation generally admitted by writers on Plato since Schleiermacher. This relation allowed by Stallbaum, Hermann, Steinhart, Susemihl, and many comparing

theories of the Phaedo confirm its place after the

direct confirmations of this view are found by

both dialogues, which are closely connected. others,224 has been in recent times very successfully defended by Teichmüller against the older view of Tennemann, Ast, and Socher, who thought that the Phaedo must have been written soon after the death of Socrates. Besides the logical theories in the Phaedo, which are found to be a continuation of those in the Symposium, there are some other indications of the priority of the Symposium. The mention at the end of the Symposium of a discussion about the identity of the tragic and comic poet has no visible aim at that place, but is very well explained if we take it as an apology for the prevalent comic character of the Symposium, and an announcement of a more serious encomium on Socrates to be delivered in the Phaedo. Also the words of Alcibiades, that nobody has yet praised Socrates as he deserves, if referred to Plato's own time, are better justified if the Phaedo had not then been written. There is a further probability that the picture of Socrates in the Symposium, if planned about the same time as that of the dying Socrates, should have been executed first, however improbable may be the generalisation of similar reasonings as carried out by Munk. Also the view on immortality implied in the Symposium presents an earlier stage than in the Phaedo. In the first moment of the contemplation of absolute Beauty, Plato could look upon immortal fame as an equivalent of immortal life. But so dear had been the belief in immortality to the author of the Gorgias that it became a natural task to base this personal immortality on the new logical theory emancipated from traditional authority. Philosophic reasoning in favour of immortality is a new departure, compared with the earlier representations of immortality as a traditional belief, a beautiful tale, true and worthy

The order of writing might in this case agree with order of events represented.

¹²⁸ A. Bischoff, *Platons Phaedo*, Erlangen 1866, pp. 282-306; L. Noack, *Philosophisch-geschichtliches Lexicon*, Leipzig 1879; also Michelis, Ribbing, and others, while Peipers, Dümmler, Christ, and Pfleiderer still believe in the priority of the *Phaedo*.

to be believed in, but not within the scope of positive knowledge.

The recognition in the Symposium of immortal fame as desirable shows a regard for human opinion far greater than that professed in the Phaedo, which in this respect approaches nearer to the disposition of mind shown in the Phaedrus, Theaetetus, and Parmenides. On the other Disregard hand, while his esteem for public opinion was decreasing, Plato's consciousness of his own power was undoubtedly growing, and here again we have an argument in favour of the later date of the Phaedo. In the Phaedo the philosopher is equal to the gods (82 Bc), while in the Symposium the gods are very much above the philosopher. proportion of apodictic affirmations, such as ἀληθέστατα, in the *Phaedo* is an additional proof of its later date. These form here 49 per cent. of all affirmations, while in no earlier dialogue do they exceed 35 per cent., which ratio they surpass in all later dialogues, rising above 50 per cent. in the Laws. This places the Phaedo in a line with the later works, and is a very characteristic sign of the increasing certainty which Plato professed to have attained—a certainty which remained with him through life, together with his consciousness of the high and divine vocation of the philosopher.

This growing confidence is specially evident if we Plato's compare two predictions about his own philosophical career put in the mouth of Socrates once in the Apology, 225 and again much later in the Phaedo 226:

Apology 81 A: τοιοῦτος οὖν ἄλλος οὐ ραδίως ύμιν γενήσεται . . .

89 CD: πλείους έσονται ύμας οί έλέγχοντες, οθς νθν έγω κατείχον, ύμεις δε ούκ ήσθάνεστε και χαλεπώτεροι ἔσονται ὄσφ νεώτεροί είσιν, καὶ ὑμεῖς μᾶλλον ἀγανακτήσετε.

Phaedo 78 A: πολλή μέν ή Έλλάς, . . . πολλά δὲ καὶ τὰ τῶν βαρβάρων γένη, οθε πάντας χρή διερευνασθαι ζητοῦντας τοιοῦτον ἐπφδόν, . . . ζητείν δέ χρη και αὐτούς μετ' άλληλων ισως γὰρ ἄν οὐδὲ ῥαδίως εὔροιτε μᾶλλον ύμῶν δυναμένους τοῦτο ποιείν.

of human opinion. Increase of Plato's certainty visible in the proportion of apodictic affirmations.

growing confidence illustrated by the allusions to his own activity contained in Apology and Phaedo.

²²⁵ This passage has been already understood as a prediction about Plato by Natorp (Philosophische Monatshefte, vol. xxvi. p. 453); Sybel (De Platonis procemiis Academicis, Marburg 1889) and others.

²²⁶ On Phaedo, 78 A, see Teichmüller, i. 123.

Allusions to Plato's travels and teaching. According to the Apology there was no hope of finding a worthy successor to Socrates; in the Phaedo it is admitted as probable that such a successor, even if sought for all over the world, could not be easily found outside the circle of Socrates' disciples, and this is said with a clear reference to Plato's travels in search of truth. In the Apology Plato speaks of the indignation which will be produced by his writings; in the Phaedo he is already conscious of the charm exercised by his philosophy, and he calls himself a charmer. We shall see how Plato progressed even to a further point in the consciousness of his own power.

Difference between Phaedo and Symposium in the treatment of poets.

Another indication of the priority of the Symposium is the different treatment of Beauty. While in the Symposium Beauty is the highest ideal, it is in the Phaedo only one among many ideas, as in the Phaedrus. In the Symposium Plato quotes poets and lawgivers as truly eminent men, deserving immortality of fame; in the Phaedo (65 B) the poets are quoted with a certain irony, as if Plato meant that any truth observed by them must be clear even to a child. While in the Symposium Aristophanes is represented as a friend of Socrates, and Plato thus forgives the gibes of the great comic poet against his master, he refers in the Phaedo (70 c: οὔκουν γ' αν οίμαι, είπειν τινα νύν ακούσαντα, οὐδ' εί κωμωδιοποιός είη, ώς άδολεσχῶ καὶ οὐ περὶ προσηκόντων τοὺς λόγους ποιούμαι) to comic poets with a certain air of superiority and contempt; this reminds us of the Republic, and seems to be directed against comic poets of Plato's own time who criticised, perhaps, the wild and playful tone of the Symposium.

Also in style the *Phaedo* follows closely the *Symposium*.

The position of the *Phaedo* after the *Cratylus* and *Symposium* is fully confirmed by the considerable number of peculiarities of later style, which bring the *Phaedo* nearer to the *Republic* and to the latest group than any of the preceding dialogues (see above, p. 170). If we take into consideration that no other work of Plato is likely to

have been composed between the Symposium and Phaedo, we must infer that the two dialogues were not separated by a great interval, since it is unlikely that Plato would remain long unproductive as an author at the period of his life in which his chief works betray such incomparable ease and mastery of form.

The stylistically well-defined group consisting of the Logical Cratylus, Symposium, and Phaedo, contains the first character exposition of the theory of ideas, and shows us how Plato was led to this theory from different starting-points. these three dialogues the ethical questions so much discussed before become secondary, and the logical problem Phaedo of knowledge, blended with the metaphysical inquiry contrasted about Being, begins to occupy the philosopher's attention. He reaches a degree of certainty and a consciousness of his power forming a remarkable contrast with the inconclusiveness and modesty of the Socratic dialogues up to the Meno. Also his literary skill, admirable already in the Euthydemus and Gorgias, arrives in the Symposium and Phaedo at a perfection not exceeded by himself in later writings, and equalled only in the Republic and Preva-Phaedrus. The polemical tone of the Euthydemus and lence of Gorgias is disappearing, and the didactic character begins to prevail. The aim of life, which in the Gorgias was defined as justice founded on knowledge, becomes chiefly knowledge, with virtue as one of its consequences. stage reached by Plato in the Cratylus, Symposium, and tion of Phaedo is introductory to that of the Republic and these Phaedrus, which represent the doctrine taught by Plato during the mature years of his life. Stylistic and logical comparison agree in connecting the Cratylus, Symposium, and Phaedo into one group of works succeeding style. each other in the first years of Plato's activity in his They were Academy. The great number of works later than these written in reduces the limits of time for their composition to a few the first years. If the Symposium was written about 385 B.C., we years

of the existence of the Academy. have no reason to put the *Phaedo* later than about 384, or between 384 and 383 B.C., as will be seen from a comparison between the *Phaedo* and later works, proving that after the *Phaedo* Plato must have written more than twice as much as he had written before.

CHAPTER VI

MIDDLE PLATONISM

WHEN Plato reached the development of his logical Philotheories as these are known to us from the Phaedo, he was anxious to apply them to practical aims with the purpose of promoting the moral progress of his contemporaries. He was not satisfied with knowing the truth for himself, and he wanted to impart it to others. Two practical applications of philosophy occupied his attention: politics and education. We have the results of his meditation on these Phaedrus. subjects in two works, the Republic and the Phaedrus.

The Republic no longer deals with the moral pro- Politics blem in the fashion of the Meno or Gorgias. In these succeed Socratic dialogues Plato asked and tried to answer moral questions referring to the conduct of the individual, in any given state, without expressly contemplating an altered condition of the state. He still professed Socratic ignorance as to politics, while he already had resolved the problem of individual conduct and individual relations between citizens, seeing therein the true politics (Gorg. 521 D). But having gained a higher metaphysical knowledge, Plato no longer dared to decline the responsibilities it implied. He was deeply interested in the reasons of the general decay of Greek states in his time, and he understood that the Socratic precept to 'mind one's own business' (τὰ ἐαυτοῦ πράττειν) would not work, if the political conditions of the state offered constant opportunities for the perversion of the If the state was acknowledged to be a necessity, the citizen and especially the philosopher could

sophical theories applied to practical aims in the Republic and

to individual ethics.

The state influence on the individual's conduct. and thus moral reform must begin by the reform

of the state, and by the reform of education. not remain indifferent to the mode in which the state was to be ruled. Plato's interest in this problem led him to write one of his greatest works, the *Republic*, in which educational and political topics are skilfully blended. Having recognised education as one of the chief instruments of political reform, he dedicated another dialogue, the *Phaedrus*, chiefly to educational questions.

I. The Republic.

The exceptional size of the Republic must be taken into account if we wish to reckon the time spent in writing this dialogue. According to some authors this was very considerable.

Every reader of Plato is familiar with the fact that the Republic is very much larger than any other work of Plato except the Laws. This impression led even Grote to a curious exaggeration, when he said (vol. iv. p. 1) that each book of the Republic is as long as any one of the preceding dialogues. He was thinking chiefly of the small spurious dialogues held by him to be authentic. In reality four of the preceding dialogues, Gorgias, Cratylus, Symposium, and Phaedo, contain in all about the same amount of text as the Republic, and it is important to bear in mind this relation if we wish to arrive at correct conclusions on the much-debated question of the unity of the Republic. An incidental observation of Hermann (p. 539), that B. V-VII appear to be written later than B. VIII-IX, and that B. X must have been added later still, has been more recently developed by Krohn, and after him by E. Pfleiderer, into a theory which breaks the continuity of the Republic, by supposing different parts of it to have been produced at intervals during the greater part of Plato's life. For anybody who wishes to understand the growth of Plato's philosophy it becomes a very important preliminary question whether Krohn was right in believing that Plato wrote much of the Republic before he had written any other dialogue. This view has been recently carried by Pfleiderer to the extreme of placing the first five books of the Republic even before the Apology,

which heretofore had been almost unanimously held to be one of the earliest writings of Plato.

If we consider that the Republic contains one-sixth The of the texts bearing Plato's name, and that it is generally admitted that he was occupied with literary labours for at least fifty years, it becomes evident that even the continuous production of the Republic could not have been the work of a short time. In our own century a volume of this size and on such an all-important subject is rarely written in less than several years, and there are immense differences between our methods of writing and the mode of literary composition which probably prevailed in Plato's time. Without referring to fountain pens and typewriting machines, the superiority of our ordinary writing materials over those that were available two thousand years ago has diminished many times the mechanical labour involved. The invention of Difference printing and the custom of revising proofs affords an infinitely easier and quicker way of correcting and maturing our works than was practicable on old papyrus rolls, with an all too limited space for additions. besides all these mechanical and material improvements, there are also deep psychological differences between an in the ancient Greek writer and ourselves. Any ordinary student of the present day has read ten or even a hundred times as much as Plato could have done at the same age; we are also generally far more practised in writing from our earliest years: even our elementary education includes besides gymnastics and music many literary studies. Keeping all this well in mind, we must ask the question: how many years must the composition of the Republic have Illustrarequired even if it were not interrupted by other labours? We suppose that in the first ten years after the death of Socrates Plato wrote about half-a-dozen small dialogues, and only two larger works (Protagoras and Meno), not amounting together to more than about three-quarters of the extent of the Republic. This was the beginning, Republic.

Republic being onesixth of all the works written in fifty years, it is probable that it took some vears to write.

in the mode of literary production. We have present time many advantages enabling us to write at a greater speed. tion from the above survey of the works preceding

and it is reasonable to expect that the author's speed in

In about six years five dialogues had been written exceeding slightly the size of the Republic.

B. II-X of the Republic and the Phaedrus are equal in size to the works written 390-384

composition was increasing. In fact the next six years (390-384 B.C.) produced five dialogues (Euthydemus, Gorgias, Cratylus, Symposium, Phaedo), which taken together slightly exceed the size of the Republic. sides, there is ample reason to suppose that some work preparatory to the Republic had been already done at the time of writing the Symposium, and the tenour and language of the first book have an obvious affinity to those of the Gorgias. Taking this for granted, there is on the other side the Phaedrus, which could not have been written before the Phaedo, as will be seen, and which also is probably not much later than the last books of the Republic. The Phaedrus, together with B. II-X of the Republic, corresponds very nearly to the total amount of the works which we place between 390 and 384 B.C. These works are so important and betray such a wonderful facility of composition, united with so complete a mastery of the language and of the subjects, that we have no reason to expect that Plato in the next period still further increased the speed of his writing. especially while his oral teaching must have occupied more and more of his time. Thus it becomes consistent with probability to suppose that the Phaedrus and Republic occupied him for another six years after 384. and this brings us to his fiftieth year, completed in 377 в.с.

It is probable that the bulk of the Republic and the Phaedrus were written in the last six

If we say that according to the above reasoning Plato worked on his *Republic* nearly up to the age of fifty, this remains only a probable inference. But where we have no direct evidence as to facts, we are justified in weighing probabilities and admitting provisionally the greatest probability, in order to obtain a distinct conception of important events. For a knowledge of Plato's philosophy it is sufficient to settle the consecutive order of his works, and it is not indispensable to name a date for each work or each part of a work. But dates are useful

as an illustration of results arrived at by the detailed comparison of each work with all the others, and it is only in order to convey to our readers a clear representation of what results from the above inquiry that we say: if Plato wrote the *Republic* as one continuous work, and after the *Phaedo*, as we shall attempt to prove, this work probably filled his time for about six years before he reached the age of fifty.

years
before
Plato
reached
the age
of fifty.

We know he was forty when he formally founded his His Euthydemus and Gorgias had prepared the way for this, and the first years of the existence of the Academy brought out the Cratylus, Symposium, and Phaedo, enouncing the new theory of ideas. Republic and Phaedrus were then written within the first ten years of the existence of the Academy. If this be so, one important point of discussion is at once dismissed. It is natural that an author between forty and fifty, labouring at one production during about six years, while his thoughts were still maturing, should insensibly alter something in its original plan, adding new matter and even falling into some trifling contradictions. rections were not then so easy as they are to-day, and the standard of literary consistency was, even for Plato, not so high, as we can see from nearly all his works. He was above everything an educator, and he did not feel obliged to say all things at once. He had taught in the Symposium a progressive exposition of truth, and he conformed to these precepts in preparing the Republic. In B. I-IV we see no direct allusion to the theories explained in the Phaedo, and we might receive the impression that the author did not yet know the eternal At the beginning of B. V we have a clear indication that what follows is an expansion of the original plan, and at the beginning of B. VIII the resumed. B. I is called in thread of B. TV is B. II expressly an introduction (προοίμιον 357 A), and B. X has distinctly the form of a conclusion, somewhat

An author forty and fifty may change some things in the plan of a work continued for several years. Educational aim explains why no mention of the theory of ideas occurs in the first books. Natural partitions of the Republic do not prevent its unity.

loosely tacked on to what precedes. There is no possible discussion about the existence of these partitions, which are evident to every reader, and have been acknowledged generally. But on the other side frequent hints unite these parts into one whole (see Jowett and Campbell, Republic, vol. ii. pp. 11-20). For our purpose, we must consider each part separately, before drawing inferences as to the whole, and we recognise in the Republic five chief divisions: B. I, B. II-IV, B. V-VII, B. VIII-IX, and B. X.

Book I

Different moods in Plato's works and different aims have a limited influence on the style.

Plato's mind during many of the best years of life seems to have alternated between a resolute withdrawal from the world, indulging contemplation with a few disciples, and the endeavour to go forth and influence the world and bring the results of contemplation to bear on the social life of humanity. It is natural that his style should alter with the alteration of aim. Yet such alteration of style has limits, and it is hardly conceivable that in a single work produced without intermission he should approach the characteristic form in part of earlier and in part of later writings.

First book of the Republic closely related to the Gorgias in contents and style.

The first book of the *Republic*, equal in size to the *Apology*, presents a strikingly close affinity to the *Gorgias* both in matter and form. The gentle treatment of Cephalus may be compared with the ironical respect for Gorgias, the puzzling of Polemarchus with the easy refutation of Polus, the sudden onslaught of Thrasymachus with the brusque interposition of Callicles. And the presumption raised by these comparisons is confirmed by the stylistic evidence, which yields very few examples of later peculiarities.

Probable allusion to the We see here Thrasymachus rising to defend a position which had to be abandoned by Polus in the Gorgias. Polus had admitted that injustice though advantageous

is uglier than justice (Gorg. 475 B: το ἀδικεῖσθαι κάκιον Gorgias ... τὸ δὲ ἀδικεῖν αἴσχιον), and this led to his defeat in in the the discussion with Socrates. Now Thrasymachus, as if he had been present then, dares to assert that perfect injustice is beautiful (Rep. 348 DE), whereby he places himself above traditional opinion. Socrates recognises the greater consistency of this position (348 Ε: τοῦτο ἤδη στερεώτερον . . . εί γὰρ λυσιτελεῖν μεν τὴν ἀδικίαν ἐτίθεσο, κακίαν μέντοι ή αισχρον αυτο ώμολογεις είναι, ώσπερ άλλοι τινές, είχομεν άν τι λέγειν κατά τὰ νομιζόμενα); we might take this as an allusion to the earlier work, and as a sign that, however the first book might be earlier than the other books, we need not admit it to be earlier than the Gorgias. The standpoint of the author is far more More advanced, since he acknowledges that his argumentation, though sufficient to overthrow a sophist's impudence, is not satisfactory to himself, so long as he has not given a definition of justice, which accordingly becomes the professed aim of the whole work. In the small dialogues no the definition of any virtue is accepted as definitive, and in sophists the larger ethical dialogues the question whether virtue secondary. is teachable overshadowed the logical inquiry as to the nature of virtue. It is only in the Republic that this problem is undertaken, and with a new purpose, to apply it to politics.

first book Republic.

advanced standpoint. Polemic against

There are some hints which show that the first book First book was not, as Hermann (p. 538) thought, originally meant as an independent whole, to which the following was added later. The mention of this life as preparing us for death (330 Ε: ἐγγυτέρω ῶν τῶν ἐκεῖ μᾶλλόν τι καθορᾶ αὐτά . . . 331 A: ἡδεῖα ἐλπὶς ἀεὶ πάρεστι) shows us that Plato, relation even when he began to write his Republic, had passed to the beyond the stage of the small dialogues, and perhaps following planned already in writing the first book the final myth concluding the tenth book.

small dialogue. Close

not an in-

dependent

Also the threefold partition of the soul, which is the most important doctrine of the fourth book, is here as in Classification of rewards here mentioned fully explained in the seventh book. Duty of philosophers to accept political power denied in Gorgias. here accepted.

the Phaedo already prepared, when Socrates says that the rulers of a state are paid in money, honour, or the advantage of escaping a penalty for refusing to rule (347 Α: μισθον τοις μέλλουσιν έθελήσειν ἄρχειν, ή άργύριον ἢ τιμὴν ἢ ζημίαν, ἐὰν μὴ ἄρχη). This is here a riddle for Glaucon, and is fully explained only in the seventh book, where the obligation of the philosopher to rule a state against his inclination is clearly expounded. This doctrine is in advance of the Gorgias, where Plato said that in order to get political influence the ruler must be like the people (Gorg. 513 B: σστις σε τούτοις ομοιότατον ἀπεργάζεται, οὖτός σε ποιήσει, ώς ἐπιθυμεῖς είναι, πολιτικὸν καὶ δητορικόν). He then saw true politics only in individual educational influence (521 D: οίμαι . . . ἐπιγειρεῖν τῆ ώς άληθώς πολιτική τέγνη καὶ πράττειν τὰ πολιτικά), and rejected Callicles' exhortations to him to take an active part in the rule of the state. Now we see that already in the first book of the

Classificamen as in the

tion of Phaedo.

Difference of terms places the first book nearer to the Gorgias. Relation to the Phaedo

Republic Plato is conscious of the duty of obtaining political power in order to avoid the penalty of being ruled by his inferiors (347 c: της ζημίας μεγίστη τὸ ὑπὸ πουηροτέρου ἄρχεσθαι). The three different kinds of men are also in the same passage opposed to each other (347 B: φιλότιμόν τε καὶ φιλάργυρου—οἱ ἀγαθοί) very much as in the Phaedo (82 c: φιλοσοφοῦντες-φιλοχρήματοι-φιλότιμοι). As in the Phaedo we see here the origin of the threefold partition of the soul. In the Phaedo Plato puts on one side the philosopher, and on the other side those who are not philosophers, almost identifying the ambitious and the money-lover (Phaedo 68 c: the opposite of the philosopher is named φιλοσώματος and subdivided: ὁ αὐτὸς δέ που ούτος τυγχάνει ων καὶ φιλοχρήματος καὶ φιλότιμος, ήτοι τὰ ἔτερα τούτων ἡ ἀμφότερα). Here, likewise, we have not a direct trichotomy but a dichotomy with a subsequent division of one of the two parts, without a definite name for the third part, for which in the Phaedo the term φιλόσοφος is used. This seems to show that B. I is

earlier than the Phaedo, and we find a confirmation of it results in the circumstance that for the lover of money the word φιλάργυρος is used, as in the Gorgias (515 Ε: Περικλέα πεποιηκέναι 'Αθηναίους φιλαργύρους), while in the Phaedo this word is replaced by φιλοχρήματος, which also frequently recurs as a constant term in the later books of The same relation between the Phaedo the Republic. and the first book results from the comparison of the following passages:

also from the different expression of the view that life is peculiar to soul.

Rep. I. 353 D, after a long enumeration of $\tilde{\epsilon}\rho\gamma a$ ($\tilde{\iota}\pi\pi o \nu$, 352 E, όφθαλμῶν, etc.) follows: μετὰ ταῦτα τόδε σκέψαι· ψυχῆς ἔστι τι έργον, δ άλλφ των δντων οὐδ' αν ένὶ πράξαις, . . . τὸ ἐπιμελεῖσθαι καὶ ἄρχειν καὶ βουλεύεσθαι καὶ τὰ τοιαῦτα πάντα, ἔσθ' ὅτφ ἄλλφ ἡ ψυχῆ δικαίως ἄν αὐτὰ ἀποδοῖμεν, καὶ φαῖμεν ίδια έκείνης είναι; --ούδενὶ άλλφ.--

Phaedo 105 c: without any preliminary explanation of what $\tilde{\epsilon}\rho\gamma\sigma\nu$ means, or of what activities of the soul constitute life, comes the question: 'Αποκρίνου . . . ຜູ້ αν τί έγγένηται σώματι, ζων έσται; 'Ωι αν ψυχή, έφη. οὐκοῦν άεὶ τοῦτο οὕτως έχει; πως γάρ οὐχί; ή δ' ος.

τί δ' αὖ τὸ ζῆν; ψυχῆς φήσομεν ἔργον εἶναι; μάλιστα.

It seems improbable that Plato should have explained This, his thought about life as a peculiar power of soul with such a series of inductions, if the result had been earlier stated to be evident, and on the other side, the short statement of the Phaedo is best justified by the more elementary exposition preceding it. It is not the length of an explanation which decides the question of priority, because a longer elucidation might be a supplement to a in the previous short statement of the question. But here we Phaedo. have on one side an elementary induction, and on the other side the result of this induction quoted as evident truth. Under these circumstances the longer explanation may be reasonably held to be the earlier.

The position of Book I between the Gorgias and Order in Phaedo is further confirmed by the notion of the peculiar the soul, virtue of the soul, which appears here as a development of what in the Gorgias was named the peculiar order in a soul:

based on long inductions in the Republic, stated as evident

mentioned in the

Gorgias, here developed. Gorg. 506 Ε: τάξει τεταγμένον και κεκοσμημένον έστιν ή άρετη έκάστου . . . κόσμος τις άρα έγγενόμενος εν έκάστω δ έκάστου οίκειος άγαθὸν παρέχει έκαστον τῶν ὅντων . . . καὶ ψυχὴ κόσμον ἔχουσα τὸν έαυτῆς ἀμείνων τῆς ἀκοσμήτου.

Rop. 858 E: ἄρ' οὖν ποτὲ ψυχὴ τὰ αὐτῆς ἔργα εὖ ἀπεργάσεται στερομένη τῆς οἰκείας ἀρετῆς, ἡ ἀδύνατον; — ᾿Αδύνατον—' Ανάγκη ἄρα κακῆ ψυχῆ κακῶς ἄρχειν καὶ ἐπιμελεῖσθαι, τῆ δὲ ἀγαθῆ πάντα ταῦτα εὖ πράττειν. Cf. 885 B: τῶν κυνῶν ἀρετή, also τῶν ἵππων.

Specific energies of the senses recognised, but without insistence.

The notion of a peculiar power of the soul is introduced in connection with the observation that each kind of perception also depends upon a peculiar faculty, resulting in a special activity, which cannot be fulfilled by any other instrument than the corresponding organ of sense (352 \mathbf{E} : ἔσθ' ὅτφ αν ἄλλφ ἴδοις ἡ ὀφθαλμοῖς ; οὐ δήτα . . . ἀκούσαις ἄλλω ἡ ὡσίν ; οὐδαμῶς. 353 Β C : ἄρ' ἄν ποτε όμματα τὸ αύτῶν ἔργον καλῶς ἀπεργάσαιντο μὴ ἔχοντα τὴν αύτῶν οἰκείαν ἀρετήν . . .). This is a clear statement of the theory known in our century as the law of specific energies of the senses. But Plato did not give any special importance to this observation, and it served him only as an analogy tending to establish his general view of human faculties. However, a variety of psychic faculties is not yet discovered in the first book, and the soul as in the Phaedo is spoken of as one indivisible whole.

BOOKS II-IV

The second, third, and fourth books of the Republic represent the primitive state.

These three books, together equal in size to the Gorgias, form one whole, and represent the primitive state, including some considerations on poetry and primary education. The end of this part does not exactly coincide with the end of the fourth book, because p. 445 B begins a new argument, the explanation of a variety of states corresponding to the variety of souls, very soon interrupted at the beginning of the fifth book by the digression on the equality of the sexes. If we disregard this last page of the fourth book, connecting it with B. V and preparing for B. VIII-IX, we are justi-

fied in treating B. II-IV as representing one important division of the Republic, independently of the question whether the following parts were added immediately afterwards or later.

We see here chiefly one theory which belongs more to Threefold psychology than to logic, but which is indispensable for an adequate appreciation of Plato's logical progress. This is the theory of the threefold partition of the soul, introduced here for the first time and based on the logical law of contradiction. Plato discovered a truth of which he evidently was not yet aware in writing the Phaedo, namely that the soul has multiple opposed activities pears here unified only through constant efforts (443 Ε : Ενα γενόμενον He acknowledges the great difficulty of ἐκ πολλῶν). deciding whether the different activities do not belong to one and the same soul (436 AB: χαλεπὰ διορίσασθαι ἀξίως λόγου . . . εἰ ὅλη τῆ ψυχῆ καθ' ἔκαστον αὐτῶν πράττομεν . . . η τρισίν οὖσιν ἄλλο ἄλλω). But he invents a safe method principle. for the solution of his new problem. He puts it down as an unquestionable truth, that the same thing cannot act or be acted upon simultaneously in contrary ways (436 Β : ταὐτὸν τάναντία ποιείν ἡ πάσχειν κατὰ ταὐτόν γε καὶ προς ταυτον ουκ έθελησει άμα, repeated 437 A, 439 B).

This sharp and general formulation of the law of contradiction not only as a law of thought, as in the Phaedo, but for the first time as a law of being, as a metaphysical axiom, repeated several times with great insistence, is a very important step, not easily to be accounted for by those who believe the first part of the Republic to belong to about the same time as the Protagoras. Also the terminology used to express this truth betrays a stage much more advanced. Plato speaks here as a philosopher already accustomed to exact definition, not the youthful inquirer hesitating and declining the definitive solution of every proposed problem, as he appeared in the Protagoras thesis is and earlier dialogues. He is now familiar with the taken for hypothetical method (437 A: ὑποθέμενοι ὡς τούτου οὕτως granted

partition of the soul based on law of contradiction. which apnot only as a law of thought. but as a metsphysical

Plato admits that each provisionally, and may be revoked later. ἔχοντος εἰς τὸ πρόσθεν προίωμεν, ὁμολογήσαντες, ἐάν ποτε ἄλλη φανή ταῦτα ἡ ταύτη, πάντα ἡμῖν τὰ ἀπὸ τούτου ξυμβαίνοντα λελυμένα ἔσεσθαι) and proceeds according to the logical rule given in the Phaedo (100 A), arguing out the consequences of the most probable hypothesis.

Three faculties of the soul, called also kinds or parts, do not exactly correspond to will, feeling, and reason.

This leads him to the conclusion that as our sensual desires are frequently in contradiction with our reason, desire and reason must be different from each other (439 c D). He thus establishes three powers or faculties of the soul for which he does not yet use the term δύναμις (Β. V 477 c: φήσομεν δυνάμεις είναι γένος τι των όντων) calling them elon (402 c, 437 d, 439 E, 440 E), yévn (443 d), or μέρη (442 c), with some hesitation as to their relation to the whole. He seems to have looked upon the faculties as organs or instruments of the soul, according to the analogy of the senses, which are instruments of the body. The three Platonic faculties do not exactly correspond to will, feeling, and reason, which have been later generally used for the classification of psychical acts. Plato's loylotiκόν (439 D: τὸ ὧ λογίζεται λογιστικὸν προσαγορεύοντες τῆς ψυχη̂s), though it is apparently the organ of reasoning, includes also the will-power, because it could otherwise not command (441 Ε: τῷ λογιστικῷ ἄργειν προσήκει). Plato did not distinguish between pure objective thought and the decisions of will resulting from a certain intellectual knowledge. For him knowledge and the will to act according to this knowledge were one. Again, he did not link into one all kinds of feelings, but separated sensual feelings, under the general appellation of desire, from the moral feeling. Thus two of his faculties (ἐπιθυμία and θυμός) correspond to one of later psychology, while he finds one faculty where later the will has been distinguished from the intellect. This union of will and intellect, as taught by Plato, is preserved in the current use of the word reason, even in the philosophical theories of Spinoza, and in the 'Praktische Vernunft' of Kant.

ledge and the will to act according to it belong to one faculty, while sensual feeling is separated from moral feeling.

Know-

Plato assumes a gradation of faculties, placing first

reason, then the moral feeling (439 E: & θυμούμεθα— Opposi-441 Ε: τῷ θυμοειδεῖ προσήκει ὑπηκόφ είναι καὶ ξυμμάχφ τούτου (τοῦ λογιστικοῦ), also 441 A), and at the lowest stage the sensuous desire (439 D: τὸ ὧ ἐρᾶ τε καὶ πεινή καὶ διψή καὶ περὶ τὰς ἄλλας ἐπιθυμίας ἐπτόηται ἀλογιστόν τε και ἐπιθυμητικόν). He argues from the contradictions and conflicts of these three faculties to their independent First, the sensuous desires are frequently Difference existence. opposed to reason and moral feeling, then the moral in their feeling itself is developed earlier than the reason (441 B: growth. θυμού μεν εύθύς γενόμενα μεστά έστι, λογισμού δ' ένιοι μεν έμοιγε δοκούσιν οὐδέποτε μεταλαμβάνειν, οί δὲ πολλοὶ ὀψέ ποτε). Here we notice that τὸ θυμοειδές does not entirely correspond even to the notion of moral feeling, because it could not then be attributed to animals (441 B: èv roîs θηρίοις αν τις ίδοι δ λέγεις).

each faculty to the other.

It is a very curious circumstance that the term Limitaθυμοειδές, very frequent in this part of the Republic, and also in B. VIII and IX, is entirely absent from B. V-VII and from B. X, recurring besides these parts of the Republic only once in Plato in the Timaeus, in connection with a recapitulation of the contents of the Republic. It seems that Plato had a passing fancy for this term and soon recognised it as insufficient, as he clearly avows later in B. VI (504 A: τριττά είδη ψυχής διαστησάμενοι . . . Β: ἐρρήθη τὰ τότε τῆς μὲν ἀκριβείας, ὡς ἐμοὶ ἐφαίνετο, ἐλλιπη . . .). Here also he already con- Imperfecfesses the imperfection of the method used (435 D: 20 y' tion of ἴσθι . . . ἀκριβώς μὲν τοῦτο ἐκ τοιούτων μεθόδων, οἵαις method νῦν ἐν τοῖε λόγοιε χρώμεθα, οὐ μή ποτε λάβωμεν) and confessed announces a 'longer way' (435 D: ἄλλη γὰρ μακροτέρα καὶ πλείων όδὸς ἡ ἐπὶ τοῦτο ἄγουσα) leading with a greater way an. certainty to truth. This longer way, however, is not nounced, fully shown in the Republic, and when later, in the sixth but not book, Glaucon insists on having it explained (506 D: fully **ὄσπερ δικαιοσύνης πέρι καὶ σωφροσύνης καὶ τῶν ἄλλων** διήλθες, ούτω καὶ περὶ τοῦ ἀγαθοῦ διέλθης), Socrates con-

the use of the term θυμοειδές.

and a longer The idea of the good could not be taught bν Socrates.

fesses himself unable to do it (506 Ε: αὐτὸ μὲν τί ποτ' ἐστὶ τάγαθόν, ἐάσωμεν τὸ νῦν είναι πλέον γάρ μοι φαίνεται ή κατά την παρούσαν όρμην εφικέσθαι του γε δοκούντος έμοι τὰ νύν), and returns to his beautiful allegories and metaphors. It was really beyond the reach not only of the historic Socrates, but even of the Platonic Socrates. When Plato set himself to expound the 'longer way,' he selected as his spokesmen Parmenides and the Eleatic Stranger, and made Socrates a hearer of their wisdom.

The mention of a longer way is an allusion to the theory of ideas. In the Symposium and the Phaedo. also, the theory of ideas was not constantly referred to.

The allusion to the longer way in B. IV is very valuable as a chronological sign, because it dismisses at once the supposition that this part of the Republic could have been written before the discovery of the theory of ideas. Plato looked upon his newly discovered treasure as a mysterium too deep to be constantly and familiarly referred to. In the Symposium the greatest part of the dialogue does not contain any allusion to the αὐτὸ τὸ καλόν, and then by a surprise the beautiful vision is presented in the speech of Diotima, suddenly as it had appeared to Plato himself in his meditations. The same order and method were observed also in the *Phaedo*. the beginning (up to p. 65 D) there is no mention of ideas, then the ideas are mentioned as notions (δίκαιον αὐτὸ 65 D), these notions are slowly worked out into independence of the senses (74 c: οὐ ταὐτὸν ἄρ' ἐστὶν ταῦτά τε τὰ ίσα καὶ αὐτὸ τὸ ἴσον), and only after the final objections of Simmias and Cebes, after the criticism of Anaxagoras and other philosophers, appears the theory of ideas introduced ironically as something well known and implied in the preceding argument (100 B: οὐδὲν καινόν, ἀλλ' ἄπερ ἀελ καὶ ἄλλοτε καὶ ἐν τῷ παρεληλυθότι λόγφ οὐδὲν πέπαυμαι This rhetorical artifice of Plato, which deceived some inquirers so far as to make them doubt the fact that the Phaedo is the first written exposition of the theory of ideas, is repeated on a larger scale in the Republic. Campbell (Rep. II. p. 11) compares the late revelation sively new of the ideas in B. V with the peripeteia of a drama.

It is an artifice peculiar to Plato to introduce SUCCES-

Sybel 227 explained this way of proceeding by educational points of motives. It is quite natural that Plato should reserve the application of the theory of ideas for special occasions. and he found no such occasion in the first sketch of his political views. It was sufficient for him to allude to the longer way.

view of greater importance.

The threefold partition of the soul is not introduced Analogy as a psychological problem, nor as subsidiary to some logical investigation, but simply in order to show the parallelism between the three classes in a state (rulers, soldiers, and middle class) and the parts of an individual soul. This analogy between the individual and the state, which can boast of such a long history after it had been thought invented by Plato, is not the idea of a young Socratic than the pupil, but of the Master of the Academy, and is a con- purely sequence of the theory of ideas. When he began to generalise widely and to seek in everything the ruling idea, he thought that he discovered an identity of of the principle between the state and the individual, and this socratic led him from the individualistic ethics of the Gorgias to dialogues. the politics of the Republic. The transition is already indicated in the Symposium (210 c: τίκτειν λόγους τοιούτους ζητείν, οίτινες ποιήσουσι βελτίους τοὺς νέους, ίνα άναγκασθη αξ θεάσασθαι τὸ ἐν τοῖς ἐπιτηδεύμασι καὶ τοῖς νόμοις καλον και τουτ' ίδειν ότι παν αυτο αυτώ ξυγγενές έστιν), and this indication has been taken for an allusion to the Republic by those who cling to the belief of a Republic written very early, within the first ten years after the death of Socrates.

between state and individual denotes a later stage of individual point of view

Such a belief is founded on a gross misconception of Relation the relations between Plato and Aristophanes, and illustrates the uselessness of interpreting Plato from

between Plato and Aristophanes.

227 L. von Sybel, Platons Technik an Symposion und Euthydem nachgewiesen, Marburg 1889; of the same author on the same subject: Platons Symposion, ein Programm der Akademie, Marburg 1888; on some smaller articles of the same author, see a review by Natorp in Philosophische Monatshefte, vol. xxvi. p. 449.

Argumentation of Schultess in favour of later date of the Republic never refuted. Partition of the soul common to the Republic with the Timaeus. while absent from the Phaedo. Subtle logical distinctions begin with the Phaedo and Republic. Statements in a very condensed form requiring logical training

uncertain allusions found in the works of others, instead of explaining him from his own writings. There is much to show that, though the method in the first books of the Republic is avowedly elementary, the threefold partition of the soul represents a later stage than the Phaedo. This has been best proved by Schultess 228 (p. 55), whose arguments have never been refuted. The theory of three parts of the soul, maintained by Plato in the Timaeus, is a later theory than the simplicity of the soul affirmed in the Phaedo, and could not be left out of consideration in the Phaedo if Plato professed it at that time. We have in the tenth book of the Republic a sample of the manner in which Plato deals with this subject afterwards. he speaks of the immortality of the soul generally, he adds there expressly that the true nature of the soul, its multiplicity or simplicity, will best be seen in the next life (612 A: τότ' ἄν τις ἴδοι αύτης την αληθη φύσιν, εἴτε πολυειδής είτε μονοειδής). A similar allusion to the parts of the soul would certainly be found in the Phaedo, if the Phaedo had been written after the first books of the Republic.

The later date of this work is also seen in another peculiarity of Plato's later writings, already visible in the Phaedo but further developed in the Republic and even later. Plato takes every possible opportunity to establish subtle logical distinctions in which we may discern the trace of his oral teaching in the Academy. He is delighted to bring such distinctions into a very concise form, which requires an explanation and is repeated afterwards. Any unprejudiced reader will recognise that a phrase like: 'δσα γ' ἐστὶ τοιαῦτα οἰα εἶναί του, τὰ μὲν ποιὰ ἄττα ποιοῦ τινός ἐστιν, τὰ δ' αὐτὰ ἔκαστα αὐτοῦ ἐκάστου μόνον' (438 B, repeated 438 D) requires some logical training to be understood at first reading. Such phrases would be vainly sought for even in the Cratylus or the Symposium, and they are far above the sophisms of the Euthydemus.

²²⁸ Fritz Schultess, Platonische Forschungen, Bonn 1875.

The Platonic Socrates delivers this logical riddle as if it to be unwere something quite natural, but Plato's experience as a teacher showed him that it was too difficult for the ordinary reader, and Glaucon answers at once that he does not understand, in order to get the necessary explanation from Socrates. Socrates explains by a number of examples that correlated terms remain correlated after the addition of a qualification to each of them. science is the science of a knowledge, then mathematical science will be the science of mathematical knowledge. Plato pushes his caution so far as to observe that the qualification of both terms need not consist in the same word, as for instance the science of health is not healthy. After this lengthy explanation he repeats his logical and shows theorem almost in the same words, and concludes with increased another example, until Glaucon is satisfied and acknowledges himself to have understood (438 E). This digression was not indispensable to the progress of the argument, and appears to have been introduced not to meet objections really made by somebody, but only as a result of Plato's increasing fondness for logic, and his experience about wrong inferences from dictum simpliciter (άπλῶς 438 E) ad dictum secundum quid, a sophism exemplified already in the Euthydemus, but treated methodically for the first time in the Republic.

A similar logical digression gives us the method of Method of exclusion or of remainders, by which one part of a whole is investigated through elimination of the other parts (428 A: ὅσπερ ἄλλων τινών τεττάρων, εί ἕν τι ἐζητοῦμεν αὐτῶν ἐν ὁτφοῦν . . . εἰ τὰ τρία πρότερον ἐγνωρίσαμεν, αὐτῷ αν τούτω ἐγνώριστο τὸ ζητούμενον). This is here introduced as leading to the definition of justice after separating from the general notion of virtue the three other virtues which together with justice constitute, according to Plato, the whole of virtue, namely temperance, courage, and wisdom. But if we look at the end of the discussion we see that the method of exclusion

derstood, and explained by examples. then repeated. This produces digressions not indispensable to the progress of argument, interest in logic.

exclusion introduced for the purpose of a definition of justice, then not used, because at the end iustice appears

to be the general source of other virtues, not coordinated to the three other virtues. has not been applied to the particular case for which it was introduced, because when justice appears at last, it is not discovered as the remaining part of virtue. After the elucidation of the three virtues corresponding to the three parts of the soul and to the three classes of citizens, Plato pretends to be still in the dark about justice (432 c: δύσβατός γέ τις ὁ τόπος φαίνεται καὶ ἐπίσκιος ἔστι γοῦν σκοτεινὸς καὶ δυσδιερεύνητος) and takes this opportunity to invent one word and to use another in a new meaning for describing this special darkness. It is the same laborious play as later in the Parmenides: justice is found not as a virtue co-ordinated to the three others, but as the source of them (433 B: δ πᾶσιν ἐκεινοις τὴν δύναμιν παρέσχεν, ὥστε ἐγγενέσθαι).

In earlier works wisdom had the first place, now given to justice, as also in the first book of the Laws.

Here also we find a point of view in advance of the Phaedo, in which wisdom was the chief virtue, and every other virtue to be exchanged for wisdom (Phaedo 69 B). The prevalence of wisdom is proper to the earlier thought of Plato, as we see in the Protagoras (352 D, cf. 357 c) and Euthydemus (282 A). In the Symposium likewise the first place is given to φρόνησιε (209 A: ψυχή προσήκει τεκείν φρόνησίν τε καὶ τὴν ἄλλην ἀρετήν), and it is a new departure in the Republic to recognise the peculiar position of justice as a link between all other virtues. maintained also in the first book of the Laws (631 c: έκ (φρονήσεως καὶ σωφροσύνης) μετ' ανδρείας κραθέντων τρίτον ἃν είη δικαιοσύνη . . . τῶν θείων ἀγαθῶν), is the later view of Plato, while in his earlier works justice was only a part of virtue, co-ordinate with holiness or temperance (Prot. 329 c). In the Meno (79 D: μή τοίνυν μηδε σύ έτι ζητουμένης άρετης όλης ό τι έστιν οίου διά των ταύτης μορίων ἀποκρινόμενος δηλώσειν αὐτην ότωοῦν, ή ἄλλο ότιοῦν τούτω τῷ αὐτῷ τρόπω λέγων) the identification of virtue with justice is even expressly denied, while already in the first book of the Republic justice appears to be the essence of virtue (353 E: ἀρετὴν ψυχής δικαιοσύνην-335 C: δικαιοσύνη ἀνθρωπεία ἀρετή), a position which seems to have been again modified in favour of νοῦς and φρόνησις in the Timaeus and the later books of the Laws.

We may admit that the increasing importance of Importjustice in the Platonic ethics is one of the practical results ance of of the theory of ideas, which required at the summit of justice Being an ibia ayaboû, prepared already in the Symposium (212 A) and in the Phaedo (99 c). Also in the second book of the Republic we meet the conception of good as a selfsufficient aim (357 B: τοιόνδε τι ἀγαθόν, δ δεξαίμεθ' αν έχειν οὐ τῶν ἀποβαινόντων ἐφιέμενοι, ἀλλ' αὐτὸ αὐτοῦ ἕνεκα ἀσπαζόμενοι), closely related to that of Aristotle in his Ethics.

results from the theory of ideas.

For the date of this part of the Republic as coming Relation next after the Phaedo and the preceding dialogues, we find to the some other hints which it will be sufficient to mention Phaedo. briefly:

1. Speech as an imitation of thought (382 BC: 76 YE Speech εν τοις λόγοις μίμημά τι του εν τη ψυχή εστί παθήματος και and ὕστερον γεγονὸς εἴδωλον) seems to refer to the Cratulus thought. (430 Β : ὄνομα μίμημα τοῦ πράγματος).

2. ἐπιστήμη is opposed to δόξα (444 A : σοφίαν τὴν ἐπιστατοῦσαν ταύτη τῆ πράξει ἐπιστήμην . . . ἀμαθίαν . . . δόξαν) as in the Meno (86 A, cf. 97 c, 98 B). In the Meno the distinction is introduced as new, and in the Republic it is assumed to be generally known. That Plato again in the Republic also currently uses ἐπιστήμη in a primitive meaning, equivalent to τέχνη, signifies nothing, because a careful fixity of terminology was not yet acquired by Plato, as we see even later in B. V-VII.

ledge and opinion well distinguished though the terms changed.

3. God is free from error and lying (382 D: mointh's Simplicity μεν άρα ψευδής εν θεφ ούκ ένι . . . Ε: πάντη άρα άψευδες τὸ δαιμόνιόν τε καὶ τὸ θεῖον). This agrees with the Cratylus (438 c: οἴει ἐναντία αν ἐτίθετο αὐτὸς αὐτῷ ὁ θείς, ων δαίμων τις ή θεός;), only here the unity and simplicity of God is insisted upon, which marks an advance beyond the traditional polytheism of earlier dialogues, which still ditional survives in some expressions (381 c : ἀδύνατον θεώ ἐθέλειν gods.

and unity of God, along with incidental mention of tra-

αύτὸν ἀλλοιοῦν, ἀλλ', ώς ἔοικε, κάλλιστος καὶ ἄριστος ὧν εἰς τὸ δυνατὸν ἔκαστος αὐτῶν μένει ἀεὶ άπλῶς ἐν τῆ αὐτοῦ μορφη). But an occasional mention of more than one god, occurring in a criticism of traditional polytheism, is no evidence against Plato's progress towards monotheism, as we see from other passages in which o beos is used in a monotheistic sense (382 Ε : ὁ θεὸς ἀπλοῦν καὶ άληθες έν τε έργω καὶ έν λόγω, καὶ οὔτε αὐτὸς μεθίσταται ούτε άλλους έξαπατά; also 379 c : ὁ θεός, ἐπειδὴ ἀγαθός, . . . τῶν ἀγαθῶν αἴτιος, and elsewhere 379 A, 380 D, etc. Cf. Phaedo 62 c: θεός). The doctrine of one God, a perfect of one God Being, developed in the Republic, is adhered to in the Timaeus and Laws, while in earlier dialogues up to the Symposium a plurality of gods is either tacitly implied or expressly admitted.

Doctrine peculiarto later Platonism.

Division of labour.

Change of attitude towards the poets is definitive, and remains up to Plato's latest age.

No reconciliation possible. and thus

4. A curious contradiction to a statement of the Symposium is contained in the principle one man one work ' (394 E : είς εκαστος εν μεν αν επιτήδευμα καλώς επιτηδεύοι, πολλά δ' ού) when applied specially to the production and acting of comedy and tragedy (395 A: οὐδὲ τὰ δοκοῦντα έγγυς άλλήλων είναι δύο μιμήματα δύνανται οι αὐτοί αμα εθ μιμείσθαι, οίον κωμφδίαν καὶ τραγφδίαν ποιούντες), while in the Symposium Socrates is made to prove the identity of the comic and tragic poet (223 D). This discrepancy is in close relation to the change of Plato's attitude towards the poets. While in the Symposium the tragic poet and the comic poet are represented as friends of Socrates; and Homer and Hesiod, as deserving immortal fame, are placed in one line with Lycurgus and Solon (209 DE), Plato now despises poetry as a mere $\mu i \mu \eta \sigma is$ and banishes Homer from his state. It is strange that some erudite critics, who readily believe in an irreconcilable enmity between Plato and Isocrates, and take such a supposition for a firm basis of Platonic chronology, at the same time admit the possibility of Plato's reconciliation with the poets, which would have taken place if the Symposium were written after the Republic or Phaedrus. It is much

less probable that a philosopher like Plato should remain the Symall his life hostile to a living man, than that he should posium become untrue to fundamental principles once recognised and repeatedly urged. We know from the last books of the Laws (941 B, 967 c, cf. 890 A, 964 c, and many other passages) that Plato up to his latest age thought poets dangerous, and we have no reason whatever to believe that he changed his opinion after he had written the Republic. Thence it results that the Republic, at least from B. II onwards, must be later than the Symposium.

must have been earlier.

5. While in the Symposium the educational influence Educaof Beauty began with the love of beautiful bodies (210 A). in the Republic harmony and rhythm are acknowledged to be the chief factors in education (400 D-401 c) and are said to creep into the soul unobserved (401 c). remember that the same view recurs in the Laws (665 E) and Timaeus (47 D), it will be easy to recognise that also in this respect the Republic is later than the Symposium.

tional importance of harmony and rhythm.

6. The purification of the senses (411 D: διακαθαιρομένων τῶν αἰσθήσεων) is a very concise term scarcely used before the Phaedo, where the necessity of such a purification is explained at length.

Purification of senses.

7. The love of the Beauty of the soul (402 D) is here Love mentioned as entirely independent of corporeal Beauty, while in the Symposium (210 B) such a love is a higher degree to which the pupil is led, after beginning with the love of physical Beauty. In the Symposium sensual love as a lower degree is almost excused, and here we find it absolutely condemned (403 B).

Beauty of the soul.

8. Although the method of exposition is a popular one and not based on the theory of ideas, in some passages terms first explained in the Symposium and Phaedo are employed as if they were familiar. This occurs apparently against the author's intention, but furnishes us with a valuable evidence against Krohn's opinion that the theory of ideas was entirely ignored by the author of the first against

taken from the theory of ideas. occurring probably

the author's intention, betray later date of composition. books of the Republic. This would leave no room for a distinction between $a \dot{v} \tau \dot{a} \tau \dot{n} \hat{s} \sigma \omega \phi \rho \sigma \sigma \dot{v} v \eta s$ εἴδη (402 c) and εἰκόνας αὐτῶν, nor for καλὰ ἤθη ἐν τῷ εἴδει ὁμολογοῦντα ἐκείνοις καὶ ξυμφωνοῦντα, τοῦ αὐτοῦ μετέχοντα τύπου, as a κάλλιστον θέαμα τῷ δυναμέν φ θεᾶσθαι (402 d). This power of superhuman vision here invoked is certainly the same which we know from the Symposium and Phaedo. Nor are traces of the theory of ideas limited to these passages. We read also τί τ' ἔστιν αὐτὸ καθ' αὐτό (358 b)—αὐτὸ δικαιοσύνην (363 A)—αὐτὸ δ' ἐκάτερον τῷ αὐτοῦ δυνάμει ἐν τῷ τοῦ ἔχοντος ψυχῷ (366 E).

Definition of courage compared with that of the Laches. Praise of iustice in the Gorgias and Republic. Caution necessary with rhetorical figures.

9. It need scarcely be added that the definition of courage (430 B: δύναμις καὶ σωτηρία διὰ παντὸς δόξης ὀρθῆς τε καὶ νομίμου δεινῶν πέρι καὶ μή), which has been held by an eminent critic to be earlier than the Laches because of the promise to treat this subject again (430 c), shows a marked advance beyond the discussion on courage in the Laches. And the supposition that the Gorgias is later because Glaucon says that nobody has as yet praised justice as it deserves (358 D) is likewise based on a mis-The Gorgias cannot be looked upon by conception. Plato at this stage as an adequate encomium on justice, because it deals with the more special question whether to suffer wrongs is better than to do them, not to dwell on the absurdity of drawing matter-of-fact inferences from a rhetorical figure. Such assertions as that about the praise of love in the Symposium or the praise of justice in the Republic cannot be taken literally; any more than Isocrates' saying in the Euagoras that nobody before him has written an encomium on a living man.

Relation of the Republic to Aristophanes' Ecclesia-susae not justified.

The above considerations fully confirm the conclusions about the date of the first part of the *Republic* which resulted from our study of style. There cannot be the smallest doubt that the first part of the *Republic*, except the first book which is probably earlier, was written after the *Symposium* and *Phaedo*, and that therefore it is impossible to admit that Aristophanes in 391, when he

produced his Ecclesiazusae, meant Plato's (IV. 424 A) Otherwise short allusion to the community of wives, or his later exposition in B. V. If this comedy were a parody of Plato's Republic, then Plato would not have represented Aristophanes a few years afterwards with all the sympathy and friendship which are evident in the Symposium. It is a strange inconsequence to believe that Plato on one side would feel a lifelong resentment for the insignificant attacks of Isocrates, and then to represent him as indifferent to a ribald parody of his most cherished ideals. Between equality of women and the rule of women there is a great difference. If Plato in the Timaeus (18 c D) and Aristotle in his Politics (1266 a 34) both clearly say that Plato was the first, and according to Aristotle the Aristotle only writer, who advocated community of wives, then it is evident that neither Plato nor Aristotle recognised the similarity which some modern critics have seen between the absurd caricature of mad women in the Ecclesiazusae and the plea for equality of sexes brought forward by Plato as the result of his meditations. The chief point for Plato was the unity of the state and the equality of the sexes. He was no advocate of abnormal sexual relations. The progress of mankind has not confirmed Plato's view, but his opinion cannot have been such an absurdity in the eyes of Aristophanes as it commuappeared to some modern readers. That the conception of a community of wives, on which Plato laid no special stress, was not a wholly novel conception, we see from a fragment of Euripides (quoted by Clem. Alex. Strom. vi. p. 751).

The coincidences quoted between the Ecclesiazusae Coinciand the Republic refer chiefly to the fifth book, and are not very striking. The subject need not be further discussed, as all consideration of it is precluded by the date of the Republic, which is placed after 385 B.C. according to our comparisons of style as well as of logical theories. So long as it is supposed that the

we should have to change also the date of the Symposium. Similarity between Republic and Ecclesiazusac not recognised by

wives suggested before Plato.

dences between Aristophanes and Plato urrelevant. Exaggelated importance has been given to them. Ecclesiazusae were produced 391 B.C., there is no possibility whatever of admitting that they refer to Plato's Republic. And if some eminent writers accepted this supposed relation, they acted like Schoene and Teichmüller in the question of style: giving an exaggerated importance to a single observation of doubtful value. is an error of method to rely upon uncertain external allusions more than on the study of contents or style. If our information seems to involve contradictions, we must carefully weigh against each other the evidence in favour of both contradictory views. We have seen above a great number of sound arguments proving that the Republic is later than the Phaedo in style and contents. This gives us a consistent view of Plato's evolution which cannot be overthrown by the very uncertain supposition that a play in which Plato is not at all mentioned, written by one of Plato's friends, could be intended as an attack on Plato's greatest work.

allusions less certain than the result of a com parative study of style and contents.

BOOKS V-VII

Interruption of the classification of constitutions by the question about position of women. This form of introducing a new subject might be intentional, or indicate

At the beginning of the fifth book Adeimantos interrupts Socrates' classification of constitutions by a question about the position of women in the ideal Republic. thread of the argument here interrupted is resumed only in B. VIII. and thus B. V-VII form a natural division of the whole and deserve to be considered apart. The view has been advanced that a more important division begins towards the end of B. V, p. 471 c, where the question of the rule of philosophers is raised, which fills the whole of B. VI-VII, offering many opportunities for logical reflections. But the transition from the particulars dealt with in the first part of B. V to problems of the highest philosophy is made quite plausible and natural, while the interruption at the beginning of B. V might be intentional and made in order to attract the reader's special attention to the

new subject, by the rhetorical artifice of an apparently un- that expected difficulty. The subjects dealt with in B. V-VII B. V-VII belong to the plan of the whole, and are not an afterthought. though this part of the Republic, if we trust stylistic comparisons, seems to have been completed somewhat later than the following books. If it is once recognised, as it must be on the authority of the same evidence, that there could not be any considerable distance of time between this part and the preceding fourth book, it becomes almost indifferent whether B. VI-VII were completed later or earlier than B. VIII-X. Admitting that they are probably written after B. IX and even after B. X, we do not agree for that reason with those who deny the unity of the Republic and the architectonic skill with which the parts of the whole structure are coordinated.

have been inserted later at that point. though they belonged to the plan of the whole.

The Platonic Republic would not be complete without the rule of philosophers, and it is irrelevant whether the explanation of this condition of the ideal state is better dealt with before or after the investigation of imperfect governments. As it stands, it crowns the picture of the ideal state and prepares the way for a representation of less perfect states. Even the discussion about the equality Republic. of sexes and the digression about international limitations of warfare (in B. V) are not out of place as an introduction to the central part of the Republic. These essential peculiarities of the ideal state could be realised only under the rule of philosophers. Thus we are justified in leaving to this part of the Republic the place given to it by Plato, and in limiting our inquiry for the present to the relation between B. V-VII and the preceding, with reference to what has been already proved of earlier writings.

The rule of philosophers an essential condition of the Platonic

The theory of ideas no longer takes the form of an hypothesis, as in the Phaedo, but appears as a wellestablished truth, and the terms ellos and idia begin to be used currently to denote ideas, along with the familiar

Theory of ideas appears to be

familiar, and the terms eldos and lôéa are freely used. Probable reference to the Phaedo and Sumposium compared with a similar allusion in the Phaedo to earlier exposition.

terms αὐτὸ καθ' αὐτό, or αὐτό, or δ ἔστιν. We have here an idea of beauty (479 A: ιδέαν τινὰ αὐτοῦ κάλλους), of each Being (486 D: τοῦ ὄντος ἰδέαν ἐκάστου), of justice (479 E: αὐτὸ τὸ δίκαιον), of injustice (476 A), of the good (505 A, 517 B, 534 C: τοῦ ἀγαθοῦ ἰδέαν), and of all other general notions. These ideas remain always the same (479 E: ἀεὶ κατὰ ταὐτὰ ώναύτως ὄντα, repeated 484 B), and each of them is the unity of many particulars (507 B: αὐτὸ δὴ καλὸν καὶ αὐτὸ ἀγαθὸν καὶ οὕτω περὶ πάντων, ἃ τότε ώς πολλά ἐτίθεμεν, πάλιν αὖ κατ' ἰδέαν μίαν ἐκάστου ώς μιᾶς ούσης τιθέντες, δ έστιν έκαστον προσαγορεύομεν). here stated to have been already frequently repeated (507 Α: τά τ' ἐν τοῖς ἔμπροσθεν ἡηθέντα καὶ ἄλλοτε ἤδη πολλάκις είρημένα). Such a reference to the theory of ideas as familiar to Socrates can only allude to the Symposium and Phaedo, and is more explicit than the famous designation of the ideas in the Phaedo as τὰ πολυθρύλητα (100 B), which has appeared to some critics a reason for placing the Phaedo after the Phaedrus and Republic. the Phaedo the mention 'à θρυλοῦμεν ἀελ' (76 D) does not even necessarily refer to the theory of ideas, but only to the notions of the beautiful, the good, &c.: 'if the beautiful, the good, and all similar attributes, about which we are always talking, have real existence,' not: 'if, as we are always repeating, the good, &c., have real existence.' In the same way 'τὰ πολυθρύλητα' (100 B) may refer to moral ideas generally, and not to their transcendental existence as substances. But in Rep. V the theory of ideas is manifestly referred to.

No fixity of terminology. Frequent use of metaphors. Moreover, no special stress is laid in the Republic on the separate and independent existence of ideas. The ideas are an object of thought (507 c: τὰς ἰδέας νοεῦσθαί φαμεν, ὁρᾶσθαι δ' οῦ). The relation of things to ideas is still described with the same terms (476 D: αὐτὸ καὶ τὰ ἐκείνου μετέχοντα) as in the Phaedo and Symposium, but how careless Plato was about the fixity of terms is evident if we consider that he speaks also of 'seeing' the idea of

the beautiful (476 B: οἱ ἐπ' αὐτὸ τὸ καλὸν δυνατοὶ ἰέναι τε καὶ ὁρᾶν καθ' αὐτὸ . . . σπάνιοι ἃν εἶεν). This is obviously a metaphor, which had been used also in the Symposium (210 Ε: κατόψεταί τι θαυμαστον την φύσιν καλόν), and means that the intellectual intuition of ideas is quite as immediate and objective as the sight of visible things. This knowledge of ideas is even much clearer than the Knowordinary knowledge based on perception (511 c: σαφέστερον ledge of τὸ ὑπὸ τῆς τοῦ διαλέγεσθαι ἐπιστήμης τοῦ ὄντος τε καὶ νοητοῦ ideas θεωρούμενον . .). Plato insists that the ideas are independent of the senses (532 A: ούτω όταν τις τώ διαλέγεσθαι επιγειρή, ἄνευ πασῶν τῶν αἰσθήσεων διὰ τοῦ λόγου ἐπ' αὐτὸ of the δ έστιν έκαστον όρμα, και μη άποστη, πρίν αν αυτό δ έστιν senses. \dot{a} γαθὸν $a\dot{v}$ τη νοήσει λάβη, cf. 537 D), and it seems as if the senses no longer enjoyed even the merit of remembering ideas through the similarity of our perception to absolute notions. This marks a development in the direction of pure idealism beyond the Phaedo. similarity between concrete things and the ideas, however, continues to be maintained (476 c: ὁ καλὰ μὲν πράγματα νομίζων, αὐτὸ δὲ κάλλος μὴ νομίζων . . . τὸ ομοιόν τω μη ομοιον άλλ' αὐτὸ ήγηται είναι ώ ἔοικεν), as the cause of errors, because every idea seems to be many, Power of while it is really one (476 A: πάντων τῶν εἰδῶν πέρι ὁ αὐτὸς knowing λόγος, αὐτὸ μὲν ἐν ἔκαστον είναι, τῆ δὲ τῶν πράξεων καὶ ideas has σωμάτων και άλλήλων κοινωνία πανταχού φανταζόμενα πολλά φαίνεσθαι έκαστου). The power or faculty of knowing the ideas as they are is here presented under different names, as γνώμη (476 D), γνῶσις (478 C, also 508 E), ἐπιστήμη (478 A), νόησις (532 B, 511 E), νοῦς (511 D), τοῦ διαλέγεσθαι δύναμις (511 B).

This variety of vocabulary need not awaken suspicion Variety of as to the perfect unity of thought in the theory. It was vocabu-Plato's usual manner in that time, to use many names for his new ideas, and he blamed those who stick to names (454 A : κατ' αὐτὸ τὸ ὄνομα διώκειν τοῦ λεχθέντος τὴν ἐναντίωσιν) as eristics, unable to classify notions accord-

ing to natural species (454 A: διὰ τὸ μὴ δύνασθαι κατ' εἴδη διαιρούμενοι τὸ λεγόμενον ἐπισκοπεῖν) and therefore using the art of contradiction (454 A: ἡ δύναμις τῆς ἀντιλογικῆς τέχνης) inferior to true logic.

Subdivision
of intellectual
faculties.
Intuition
of ideas
the
highest
faculty;
it depends
on the
idea of
the Good.

Apart from the diversity of names it is evident that Plato has progressed since his first attempt at a classification of psychical acts, and that the reason (λογιστικόν) of B. IV is now subdivided into several distinct faculties (δυνάμεις 477 c, cf. 443 B, 518 c) among which the highest is the science or vision of ideas, or of true Being (τὸ ον παντελώς 477 A, είλικρινώς, ibidem, οὐσία 525 B, 534 A, &c.). This knowledge is infallible (477 Ε: ἀναμάρτητον), and is no longer as in the Phaedo based upon an ultimate hypothesis as the most probable truth, but upon a principle above every doubt (510 B: ἀρχὴν ἀνυπόθετον, cf. 511 B: μέχρι τοῦ ἀνυποθέτου ἐπὶ τὴν τοῦ παντὸς ἀρχήν, cf. 533 c, 534 B). The knowledge of this principle is not an inference, but an intuition, and Plato constantly uses metaphorical expressions taken from the senses of sight and touch to denote the immediate character of his highest knowledge (ἰδεῖν 511 A, 533 C, ἄπτεσθαι 511 B, ψυχῆς ὅμμα 533 D, όραν 476 B, θεασθαι 518 C, &c.).

Idea of the Good identical with final cause of the *Phaedo*. Plato shows only the way leading to it. The principle itself, being the foundation of all this highest science, is the idea of the Good (ἡ τοῦ ἀγαθοῦ ἰδέα μέγιστον μάθημα 505 A), identical with that δαιμονία ἰσχύν mentioned in the Phaedo (99 c) and there held to be beyond the reach of mankind (Phaedo 99 c D: ταύτης ἐστερήθην καὶ οὖτ' αὐτὸς εὐρεῖν οὖτε παρ' ἄλλον μαθεῖν οἶός τε ἐγενόμην). Now Plato has found it, but he feels unable to show it to his readers (533 A: οὐκέτ' οἶός τ' ἔσει ἀκολουθεῖν) otherwise than by indicating the method of training, which leads to the evolution of the dialectical faculty. He says enough about his idea of Good to enable modern readers, who have gone through the prescribed training, and are familiar with abstraction, to distinguish what has been said metaphorically from the abstract meaning of his thoughts.

In order to under-

If we wish to understand Plato's idea of the Good, we

must bear in mind that mythical falsehoods have an edu- stand it cational value (382 c), and that he was carried off by the we must novelty and the sublime beauty of his subject into some exaggerations, which he confesses clearly towards the end of the whole logical digression (536 c: ἐπελαθόμην ὅτι έπαίζομεν, καὶ μάλλον ἐντεινάμενος εἶπον. λέγων γὰρ ἄμα έβλεψα προς φιλοσοφίαν, και ιδών προπηλακισμένην from ἀναξίως, ἀγανακτήσας μοι δοκῶ καὶ ὥσπερ θυμωθεὶς τοῖς reasoning. αἰτίοις σπουδαιότερον εἰπεῖν ἃ εἶπον). In his indignation at the degraded condition of philosophy, Plato exalted her power and dignity. He does not add, in what particulars this exaggeration was contained, because the trifling correction introduced by this strange confession, namely the question of the most convenient age for dialectical studies, would not justify his apology.

One property, at least, attributed to the idea of Good cannot be taken literally.229 Plato says the idea of Good of the exceeds even Being itself in power and dignity (509 B: ούκ ούσίας όντος του άγαθου, άλλ' έτι επέκεινα της ούσίας πρεσβεία καὶ δυνάμει ὑπερέχοντος) and is the first cause of all Being as well as of all knowledge and truth (508 E: αιτίαν δ' επιστήμης ούσαν και άληθείας ώς γιγνωσκομένης... cf. 509 B). Having thus brought the expectation of his ledge. hearers to the highest point, he not only refuses any Nearer exexplanation of the dialectic power which perceives the planation idea of Good (533 A) but declines even to insist that his view of it is correct (533 A: οὐκίτ' ἄξιον τοῦτο διισχυρίζεσθαι, cf. Phaedo 114 D). Here he employs much rhetorical artifice with the aim of inducing his readers to attempt the long and tedious training which according to his indications leads to this vision of overwhelming Beauty, the idea of Good. But this idea of Good in the Republic, with all its brilliancy and grandeur, cannot aim. be anything else than the final cause depicted in more

²²⁹ See Paul Shorey, 'The idea of Good in Plato's Republic: a study in the Logic of Speculative Ethics,' in vol. i. pp. 188-239 of the Studies in Classical Philology of the University of Chicago, Chicago 1895.

sober language in the Phaedo. That it is raised above

all hypotheses as an unconditioned principle means only that since the time when he wrote the Phaedo Plato had grown so much accustomed to his highest hypothesis that it has lost for him every hypothetical character. also become more substantial through intimate association with the practical aspirations which now absorbed him. At the same time, if he placed the idea of Good beyond Being, he made a very decisive step towards a return from the conception of the separate and independent existence An idea as a necessary notion of every possible conscious mind is not a substance, and yet limits and shapes the existence of substances. We have no sufficient evidence for saying that Plato when he wrote the Republic had fully realised this truth, but if he did so, he had no need to change anything in his revelations about the idea of Good and the other ideas. His doctrine that truth is rather to be found in thought than in actual life (473 A: φύσιν έγει πράξιν λέξεως ήττον άληθείας έφάπτεσθαι, κάν εἰ μή τφ δοκεί) is a sign that he went still farther away from his starting point referred to in the

Truth sought in thought rather than in reality.

Conditions of philosophical training.

Love of all knowledge not of sights or sounds. The conditions for an actual development of the faculty by which we see the idea of Good are depicted with glowing eloquence. Not everybody is able to follow the path, even if he has a leader (479 Ε: τοὺς αὐτὸ τὸ καλὸν μὴ ὁρῶντας, μηδ' ἄλλφ ἐπ' αὐτὸ ἄγοντι δυναμένους ἔπεσθαι...δοξάζειν φήσομεν). A philosopher is born, and when born, he must also be made and have a strong will to develope his innate power (518 c). He has a golden nature (415 A), and loves wisdom and knowledge above everything (475 Β: τὸν φιλόσοφον σοφίας φήσομεν ἐπιθυμητὴν εἶναι, οὐ τῆς μέν, τῆς δ' οὕ, ἀλλὰ πάσης—cf. 376 Β: τὸ γε φιλομαθὲς καὶ φιλόσοφον ταὐτόν, also Phaedo 82 c φιλομαθής is parallel to φιλοσοφήσας); he is insatiable of every kind of knowledge (475 c). Therein he is opposed to the sight-lover and others who care only for

Phaedo, that thought is an image of Being.

concrete things (476 B). A philosopher betrays already in his childhood the greatest love of justice (486 B: ψυγην σκοπών φιλόσοφον και μη εὐθύς νέου όντος ἐπισκέψει, εί άρα δικαία τε καὶ ημερος η δυσκοινώνητος καὶ άγρία), an excellent memory, a great facility of learning, he is generous, kind, truthful, courageous, and temperate (487 Α : φύσει μνήμων, εὐμαθής, μεγαλοπρεπής, εὔχαρις, φίλος τε καὶ ξυγγενής άληθείας, δικαιοσύνης, άνδρείας, σωφροσύνης). From his youth upwards he loves truth beyond everything (485 D: τον τῷ ὄντι φιλομαθή πάσης άληθείας δει εὐθὺς ἐκ νέου ὅ τι μάλιστα ὀρέγεσθαι). grows accustomed to consider the whole of the universe in his meditations (486 A: ψυχη μελλούση τοῦ ὅλου καὶ παντὸς ἀεὶ ἐπορέξεσθαι θείου καὶ ἀνθρωπίνου), which reach far beyond the limits of his own time and include the totality of Being (486 A: ή ὑπάργει διανοία μεγαλοπρέπεια καὶ θεωρία παντὸς μὲν χρόνου, πάσης δὲ οὐσίας, οίου τε οίει τούτω μέγα τι δοκείν είναι τον άνθρωπινον Blov;) whereby human life appears insignificant, and death loses all its terrors (486 B). Through all ephemeral appearances he perceives a substance free from changes (485 Β: ἐκείνης της οὐσίας της ἀεὶ οὖσης καὶ μη πλανωμένης ύπο γενέσεως και Φθοράς και πάσης αὐτης) and neglects no manifestation of eternal Being, having an open eye for the smallest detail as well as for the whole. His faculty by which he sees the ideas (479 Ε: αὐτὰ έκαστα καὶ ἀεὶ κατὰ ταὐτὰ ώσαύτως ὄντα) does not impair in any way the exercise of all virtues and the capacity for acquiring practical experience (484 D: ἐμπειρία μηδὲν ἐκείνων ἐλλείποντας μηδ' ἐν ἄλλφ μηδενὶ μέρει ἀρετής ύστεροῦντας).

This image of the philosopher is made still more Philoattractive by the contrast to the merely practical ordinary man (476 A) who esteems vulgar opinions (480 A), ignoring the certitude of science. He is dreaming. because he is unable to distinguish concrete things from the ideas, being deceived by their similarity (476 A, cf. has only

velopment of moral qualities. Good memory. facility of learning. Philosophers possess all virtues. Contempt for the limitations of human life, which appears to be insignificant, as compared with the existence of the universe.

sopher contrasted with the practical man who

blind opinions.

534 c). Plato calls such would-be practical persons blind (484 c : ή οὖν δοκοῦσί τι τυφλών διαφέρειν οἱ τῷ ὄντι τοῦ όντος ἐκάστου ἐστερημένοι τῆς γνώσεως; cf. 506 c), their opinions are sophisms (496 A), and if they hit the truth by accident they do it like a blind man following the right road (506 c).

Idea of the Good the clearest in all existence. compared with the brightest object of sight. Reason and truth produced by the philosopher.

The power of the philosopher (511 B: ή τοῦ διαλέγεσθαι δύναμις) is directed towards the idea of the Good which is the clearest idea in existence (518 c D: τοῦ ὄντος τὸ Φανότατον . . . είναι φαμεν τάγαθόν). Whatever else Plato says about the idea of Good, as cause of truth, reason, and Being (517 c: ἀγαθοῦ ἰδέα ... ἀλήθειαν καὶ sun as the νοῦν παρασχομένη . . . 509 Β : καὶ τὸ είναί τε καὶ τὴν οὐσίαν ύπ' ἐκείνου αὐτοῖς προσεῖναι), does not exclude the idea of Good from the system of ideas. Something is sacrificed to the defective comparison of the good with the sun, the light with truth (508 A-509 D). Plato had himself admitted, in agreement with the common psychological experience, that truth and reason are a product of the philosopher's own activity (490 B: ο γε οντως φιλομαθής, . . . γεννήσας νοῦν καὶ ἀλήθειαν, γνοίη τε καὶ ἀληθώς ζώη), and if afterwards for the purpose of drawing a parallel between the material and intellectual world he attributes truth to a power independent of the individual mind, this must be counted among the exaggerations into which he was led by the greatness of the subject.

Highest level of knowledge attainable through highest training. Mathematical training required

from the

In the whole Platonic doctrine of the ideal philosopher there is a permanent truth embodied: that the highest level of objective knowledge can be reached only by the highest subjective training of the best individuals. Looked at from this point of view, Plato's indications as to this special training deserve the attention of the logician, and belong really to the logic of Plato.

The way of initiation proceeds no longer, as in the Symposium, through esthetical contemplation, but is prepared, as in the Phaedo, by a course of mathematical propaedeutics. The power of mathematical studies in developing abstract thought is illustrated by philotwo fresh examples, taken one from arithmetic and the other from geometry. The identity of units, which is fundamental in arithmetical inquiries, does not exist in our sensual experience, where each unit is different from every other. This identity can only be understood by the action of thought (526 A: ἀριθμῶν ἐν οἶς τὸ ἐν ἴσον τε units of έκαστον παν παντί και οὐδε σμικρον διαφέρον, μοριόν τε έγον sense exέν έαυτῷ οὐδέν . . . διανοηθηναι μόνον ἐγχωρεῖ, ἄλλως δ' perience. οὐδαμῶς μεταχειρίζεσθαι δυνατόν). We owe it to the clearness of numbers that we distinguish things which to our senses appear confused (524 c: μέγα μὴν καὶ ὄψις καὶ σμικρον έώρα . . . συγκεχυμένον τι. διὰ δὲ τὴν τούτου σαφήνειαν μέγα αὖ καὶ σμικρὸν ή νόησις ήνωγκάσθη ίδειν, ού συγκεγυμένα άλλὰ διωρισμένα, τούναντίον ή 'κείνη). This difference between numerical exactness and the inexactness of sense perception is the origin of rational inquiry about the nature of quantity (524 c: ἐντεῦθέν ποθεν πρώτον επέρχεται ερέσθαι ήμιν, τί οδυ ποτ' εστί τὸ μέγα αὖ καὶ τὸ σμικρόν). A similar difference exists be- Difference tween the material models of geometrical figures and the ideal figures which they represent. Even Daidalos or another most skilful technical genius could never draw or form figures corresponding to our ideal notion of them (529 E), and it would be ridiculous to make geometrical inferences or to endeavour to learn the truth about geometrical properties of figures from such models, and not tation. from the models of ideal figures that exist only in our thought, surpassing in exactness everything visible to the eye. On these examples Plato shows that mathematical studies lead from ever-changing perceptions to the true substance of Being (521 D: μάθημα ψυχής όλκον ἀπὸ τοῦ γυγνομένου ἐπὶ τὸ ὄν), from the twilight of vulgar experience to the daylight of philosophy (521 c: ἐκ νυκτερινῆs τινὸς ήμέρας εἰς ἀληθινὴν τοῦ ὄντος οὖσαν ἐπάνοδου, ἢν δὴ Study of φιλοσοφίαν άληθη φήσομεν είναι). But the philosopher mathewill not content himself with such a knowledge of mathe- matics

sopher. Mathematical units differ widely from the

between ideal geometrical figures and their material represen-

for philosophical training independently of practical considerations. matics as is useful for a practical man; his immediate aim is not any practical application, but theoretical knowledge (525 B). He will push his investigations far enough to understand the nature of quantity, without caring for practical advantages (525 c: Ews av êm) θέαν της των αριθμών φύσεως αφίκωνται τη νοήσει αυτή, ούκ ωνής ούδε πράσεως χάριν, άλλ' ένεκα αὐτης της ψυχης ραστώνης τε μεταστροφής ἀπὸ γενέσεως ἐπ' ἀλήθειάν τε καὶ οὐσίαν ...). Such theoretical studies develope an organ of the soul more valuable than a thousand eyes, because it is the only eye which beholds truth (527 D E: ἐν τούτοις τοῖς μαθήμασιν εκάστου δργανόν τι ψυχής εκκαθαίρεται . . . κρείττον δυ σωθήναι μυρίων όμματων μόνω γάρ αὐτῷ ἀλήθεια ὁρᾶται). Plato complains that solid geometry was in his times very much behind plane geometry, and believes that it is in the power of the state to further such inquiries by honouring them as they deserve (528 B). He recommends also astronomy to the future philosopher, but adds that a philosophical astronomer will not expect very much from mere observation of the stars. use the sight of the stars just as a mathematician uses roughly drawn figures with a view to the discovery of general laws.

Solid geometry recommended.

Astronomy not limited to observation of the stars.

Striking anticipations of the modern progress of astronomy. Plato shows here a deep insight into the logical nature of theoretical knowledge. His very words can be applied even to-day to investigations about the possibility of which he could not have a definite idea. When he says that through all the apparent movements the astronomer should reach the true velocity and the true orbits and movements of heavenly bodies, and that this can be done only by thought, not by sight (529 D), the modern reader involuntarily remembers how Adams and Leverrier discovered Neptune without the use of a telescope, by following out purely theoretical considerations. When Plato further decides a priori that the movements of the stars must undergo periodical changes and cannot remain always the same (530 B: ἀτοπον ἡγήσεται τὸν νομίζοντα

γίγνεσθαί τε ταῦτα ἀεὶ ώσαύτως καὶ οὐδαμή οὐδὲν παραλλάττειν, σῶμά τε ἔχοντα καὶ ὁρώμενα), this appears a still more striking example of true physical knowledge acquired by pure thought.

But our illusion is destroyed when we read that the Contempt details of the movements of the stars are not worth careful search, precisely because they undergo changes. Here the whole distance between Plato's logic and the modern logic becomes evident. For Plato science could only refer to knowledge, while we have learnt to deal scientifically with probabilities. Plato was perfectly right in holding that absolutely exact knowledge is impossible in astronomy and every other investigation of nature. But he was wrong in supposing that therefore these subjects cannot be dealt with scientifically. The whole natural science of to-day, though few persons are always aware of it, is a science of approximations and probabilities. We have learnt to estimate the possible amount of our errors, and to reduce them to units of such low degree that we can neglect them. owe this power chiefly to the infinitesimal calculus. which marks the essential advance of science from Plato's days to the present epoch of scientific progress. Plato had no instrument for such evaluations, and he therefore calculus. could not admit an exact knowledge of astronomy. went so far as to say that looking up at the stars not only does not exalt the soul, but does not even teach us anything, because the soul rises upwards only through inquiries about invisible Being (529 Β: οὐ δύναμαι ἄλλο τι νομίσαι άνω ποιούν ψυχην βλέπειν μάθημα η έκείνο, δ αν περὶ τὸ ὄν τε ἢ καὶ τὸ ἀόρατον).

The eyes must in no way be esteemed above reason, nor the ears, and Plato despises equally those who believe in learning music by hearing tones and distinguishing them as sharp and flat (531 A). The true theory of music has higher problems to resolve, and studies the harmony of numbers and its reason (531 c: ἐπισκοπεῖν τίνες ξύμφωνοι

for actual observation carried very far. because Plato was not aware of the possibility of a scientific investigation of probabilities. This became possible only through the infinitesimal

άριθμοὶ καὶ τίνες οὕ, καὶ διὰ τί ἐκάτεροι). Such higher music and higher astronomy, making use of the stars and of sound-harmonies only as matter for generalisations which show the unity of the whole, are recommended by Plato as useful in the preparatory training of a philosopher (531 D). But even such studies are only introductory to dialectic. Mathematicians, astronomers, musicians are only dreaming about true Being; so long as they rely on hypotheses, without being able to give reasons for them, their studies do not deserve the name of true science (533 c: ἀνειρώττουσι μὲν περὶ τὸ ὄν, ὕπαρ δὲ ἀδύνατον αὐταῖς ἰδεῖν).

First principles must be best known. and this is the pr vilege of dialectic. The dialectician is able to give the ultimate reasons of his convictions, and refers all hypotheses to their source. distrusting the testimony of the senses. General system of

A true science cannot be based on unknown or unknowable first principles (533 c: ώ γαρ άργη μεν δ μη οίδε, τελευτή δε και τὰ μεταξύ έξ ου μή οίδε συμπέπλεκται, τίς μηχανή την τοιαύτην όμολογίαν ποτε επιστήμην γενέσθαι;). Such apparent sciences rest on mutual agreement, while only Dialectic rises above all hypothetical beginnings (533 C D: ή διαλεκτική μέθοδος μόνη ταύτη πορεύεται, τὰς ύποθέσεις αναιρούσα, έπ' αὐτὴν τὴν αργήν, ἵνα βεβαιώσηται) up to the absolute principle to which it gives the highest The dialectician seeks the substance of each thing (534 B: διαλεκτικόν καλείς τον λόγον έκάστου λαμβάνοντα της οὐσίας) and conceives himself to know something only in so far as he is able to give reasons for it (534 Β: τὸν μὴ ἔχοντα, καθ' ὅσον ἄν μὴ ἔχῃ λόγον αὐτῷ τε καὶ ἄλλφ διδόναι, κατά τοσοῦτον νοῦν περὶ τούτου οὐ φήσεις Dialectic, then, or as we should now term it, metaphysic, is at the summit of all other sciences (534 E). This summit is reached through the ability of asking questions and answering them (531 E, 534 D), and through using the hypotheses with a full consciousness of their hypothetical character, until the highest principle is found, without any reliance on the testimony of the senses (511 B c). Plato had then already conceived a general system of human knowledge, including all sciences and uniting them into one whole (537 c: τά τε χύδην μαθήματα

. . . συνακτέον είς σύνοψιν οἰκειότητος άλλήλων τῶν μαθη- knowledge μάτων καὶ τῆς τοῦ ὄντος φύσεως). Only those who are able to perceive the unity of things are dialecticians (537 C: ό συνοπτικός διαλεκτικός).

This picture of the subjective training, which is indispensable if the highest objective knowledge is to be attained, betrays a point of view far more advanced than the Symposium, in which the subjective training was also recognised as indispensable, but started not from reason but from esthetical and ethical experience. Though in with the Phaedo the importance of mathematics was already accepted, and one highest principle alluded to, we see here a greater certainty manifested as to this highest principle. We find the philosopher enraptured over his discovery; it was Plato's own discovery that all the details of existence can be brought into relation to one final cause of the universe. His great predecessor Parmenides had only recognised the unity of the whole, and the declared the 'many' an illusion. Plato was the first to universe. bridge over that abyss between the one and the many. and his metaphysical discovery is one that has never since been refuted.

Plato's conception of one final aim of the universe, of the connection between the highest idea and the most minute particulars even of sensible experience, remains unchanged after a long progress of particular sciences and of philosophy. This conception he caught sight of in the Symposium, declared it beyond his understanding in the Phaedo, and affirmed confidently later its existence in the Republic, though he still declined to philoexplain it fully (506 D, 533 A), alleging as one reason that sophy. Socrates is unable to give that full explanation, and as another that Glaucon is not yet sufficiently prepared to understand it. But enough is said to enable the modern reader to see that Plato was in full possession of his highest principle when he wrote his Republic. He called Greatest it a model contained in the soul (484 c: evapyès ev th exactness

based on pure thought.

Subjective training of the dialectician beginning mathematics and leading to the conception of the final cause of

This conception is a discovery of Plato remaining in all

in the highest generalisation. ψυχή παράδειγμα), and he required the greatest exactness in the highest generalisations of science (504 D E: γελοῖου . . . τῶν μεγίστων μὴ μεγίστας ἀξιοῦν εἶναι καὶ τὰς ἀκριβείας).

Comparison of the idea of the Good with the sun. and of the earth with a cave. Explanation why the philosopher is liable to err in practical life, though he has a higher knowledge of Being.

Two allegories used by Plato in the Republic to illustrate his thoughts are deservedly famous. comparison between the sun and the idea of Good is deficient and contradictory, as truth, according to Plato's own acknowledgment, comes not to us from without like the light of day. But the other allegory in which this world is represented as similar to a cave (514-518) is one of the most beautiful and consistent answers of a philosopher to practical people who deride philosophy as useless. Plato here explains why the philosopher, accustomed to the most difficult problems of Being, appears at first sight liable to error in practical life, and how he, better than the merely practical man, very soon acquires a certainty in action impossible for those who know only practical life and have never measured the depth of the world of thought. Nearly every image in the allegory of the cave has a deep meaning. We spend our life in chains, being limited in the possibility of our movements, and prevented by our situation from knowing the truth. Those who succeed in liberating themselves from the chains of earthly passion and human ignorance, and explore a world much wider than the cave in which the others are living, have laid on them, according to Plato, the duty of returning among their former companions in misfortune and of instructing them so as to set free as many as possible. They will not be believed at first, and people will laugh at their tales about the beauties of the upper world, and they will sometimes commit slight errors about objects seen in the cave, which are like shadows of the realities above. Their sight, after long dwelling in full daylight, requires some time to get accustomed to the darkness of the cave, in order to distinguish the shadows, which to the prisoners appear to be the

highest realities. But once accustomed, the philosopher Once acwill judge more correctly than others, even about those shadows, because he knows the realities which produce them, and he has seen the sun of Truth, which does not shine in the cave. This beautiful allegory need not be repeated in all its details, as it may be assumed to be familiar to our readers. It has a very great logical importance, as it shows that for Plato at that time begins to sensible experience was the shadow of the ideas. is also the only hint which the Republic contains that the ideas might be independent of the human mind and indeed of any existing consciousness. In many passages, as we have seen, the ideas are spoken of as existing in the than those philosopher's soul and even as a product of the activity who never of his thought. It seems that Plato no longer attached saw the such importance to their separate existence, and that he had to a certain extent reconciled himself to the identity of ideas with general notions.

The theory of ideas and of the dialectical faculty Matheoccupies the largest place in this part of the Republic, while the remaining intellectual faculties are briefly disposed of. The second rank is taken by the mathematical knowledge termed here διάνοια (534 A). difference between this faculty and dialectical knowledge compared consists in the use of hypotheses (510 B), which re- with diamain untouched by the mathematician. As such hypo-lectic. theses Plato quotes arithmetical properties of numbers and geometrical properties of figures, which are admitted to be the ultimate foundations of mathematical science (510 c).

Both διάνοια and ἐπιστήμη are called in one passage Subνόησις and opposed to the inferior faculty of opinion division (δόξα 534 A), which is again subdivided into πίστις of intelreferring to things and sinasia to images (511 E). It seems that this division, mentioned here only and never again used by Plato, had a purely occasional character It was inand served the purpose of an elaborate parallelism troduced

customed to the darkness of the cave, the philosopher distinguish even appearances better light of truth.

knowledge has the second rank as

lectual faculties irrelevant. for the sake of analogy. Not maintained consistently.

between the sense of sight and the intuition of the soul. To correspond to the difference between things and images a division of ideas was wanted, and the mathematical figures best corresponded within the ideal world to the images of the physical world. So far the analogy was plausible, but the subdivision of the two chief faculties of opinion and science into four was not justified and is frequently contradicted by Plato in the same text, as he uses διάνοια, νόησις, ἐπιστήμη and διαλεκτική δύναμις indifferently one for another. Even in the sixth and seventh books the distinction is by no means consistently followed, and in some passages (500 B: 700 γε ώς άληθως πρός τοις ούσι την διινοιαν έχοντι-511 Α: ζητοῦντές τε αὐτὰ ἐκεῖνα ἰδεῖν α οὐκ αν άλλως ἴδοι τις ή τή διανοία - 529 D: τὸ δν τάγος & δὴ λόγφ μὲν καὶ διανοία ληπτά, ὄψει δ' οῦ) διίνοια means pure thought, and not the special faculty of mathematical knowledge which had been named διάνοια (511 D: διάνοιαν καλείν μοι δοκείς την τῶν γεωμετρικῶν . . . ἔξιν).

Also subdivision of opinion into two different faculties has no importance. Equally irrelevant is the subdivision of opinion (δόξα) into an opinion about things (πίστις 511 E, 534 A), and an opinion about images (εἰκασία 511 E, 534 A). This division is of no importance and proves only Plato's fondness for symmetrical dichotomies. He never again alludes to these distinctions, and the old bipartition of intellectual activity into opinion and knowledge remains here as in all other works of Plato fundamental. Opinion is intermediate between ignorance and knowledge (477 B, cf. 478 D), and it refers to what in one respect is being and in another not-being, and appears as intermediate between substance and nothing (478 D: οἶον ἄμα ὄν τε καὶ μὴ ὄν).

²⁵⁰ It has been attempted to find a relation between the four intellectual faculties of the *Republic* and the degrees of perfection in the *Symposium* (Carl Boetticher, 'Eros und Erkenntniss bei Plato in ihrer gegenseitigen Förderung und Ergänzung,' *Jahresbericht des Luisenstüdtischen Gymnasiums su Berlin*, Ostern 1894), but the exposition is by no means convincing.

For the first time Plato here investigates the object of Object of opinion as differing both from the object of knowledge and from that of ignorance. While the ideas are the proper object of science, they are not accessible to opinion, and Plato defines with great logical acuteness what is susceptible of opinion. It is anything that could be other- it is. wise than it is (479 A). We see here clearly established the difference between accident and substance, opinion and This very important logical theory was prepared by the law of contradiction, stated in the Phaedo, where Plato observed that apparent contradictions are found in things but not in ideas (Phaedo 103 B). But neither in the Phaedo nor in any earlier work had the difference between the object of science and that of opinion been recognised.

It is interesting to observe that Plato employs this Recognidistinction between accident and substance to justify his conviction of the mental equality between the sexes, wherein he was so much in advance of his own times, and even of the reigning prejudice of our own century. It is the sexes. one of the deepest thoughts in Plato's Republic, that the sexual difference is accidental and exterior as compared with individual intellectual differences among men as well as women (454 B-455 A). And this thought is one of the most interesting practical applications of Plato's Plato thus proclaimed the truth that thought is independent even of such fundamental bodily conditions as the difference of sex. Many times later philosophers have been drawn by the strength of appearance to credit organs of our body with pure thought, and thus to bodily condestroy the soul's independence and permanence. had within his limited experience many inducements to Plato the admit the popular belief that some part of the body is active in thought. He resisted this temptation and was the first to understand clearly and to affirm confidently that thought is an activity of the invisible, incorporeal soul, which does not need material organs for its exercise. activity of That the body's only aim is to supply us with sensations the soul.

opinion: everything that could be otherwise than

tion of the mental equality between

Thought independent of the body. even of the most essential Plato ditions. first to understand that thought

and to act on the outward world according to our own will, is a truth which remains even to-day incredible to some physiologists unjustly called psychologists. This truth was discovered by Plato and constantly reaffirmed by him, from the *Phaedo* onwards to his latest works.

Not-Being object of ignorance, which is identical with wrong opinion.

A consequence of the doctrine that the objects of opinion and science are not the same led Plato to his theory about Not-Being or Nothing as the object of ignorance. Ignorance is a state of the soul, and consists in believing what is not (478 B: ἀδύνατον καὶ διξασαι τὸ μη όν . . . C: Μη δυτι μην άγνοιαν έξ ανάγκης απέδομεν, ὄντι δὲ γνῶσιν). Therein ignorance is distinguished from mere opinion and coincides with 'wrong opinion' (δόξα Ψευδήs) called also άμαθία by Plato (Prot. 358 c: άμαθίαν τὸ τοιόνδε λέγετε, τὸ ψευδη έχειν δόξαν καὶ ἐψεῦσθαι περὶ τῶν πραγμάτων τῶν πολλοῦ ἀξίων, cf. Euthyd. 286 D, and also Theaet. 170 B, Polit. 309 A, Crat. 429 D: τοῦτό ἐστιν τὸ ψευδή λέγειν, τὸ μὴ τὰ ὄνια λέγειν). Opinion as intermediate between ignorance and knowledge had been already mentioned in the Meno and Symposium (202 A: τὸ ὀρθὰ δοξάζειν . . . ἔστιν τι μεταξύ σοφίας καὶ ἀμαθίας) but then with the predicate of 'right' which is dropped here, with an intention of exact terminology not afterwards maintained.

Relation to the *Phaedo* in the conception of the ultimate aim of life, above pleasure and even knowledge.

In the above exposition of the logical theories contained in B. V-VII we had already occasion to see that Plato has here advanced beyond the stage of the *Phaedo*. But perhaps a more evident proof of this position is found in an ethical hint about the highest aims of life. It was a current theory of earlier dialogues that true happiness is the aim of each individual, and the tale of rewards and punishments after death was in agreement with this conception of the aims of life. Even in the first books of the *Republic* this was tacitly admitted, and in the ninth book Plato attempts to prove that the philosopher is happier than anybody else. Intellectual pleasure or knowledge (φρόνησιε Phaedo 76 c, 79 D) was the highest

ideal of Plato before the Republic. Now he declares that the aim cannot be pleasure, nor even knowledge (505 BC), because there are bad pleasures, and because the knowledge, if defined, will turn out to be the knowledge of the good. The aim of life is higher than this, and must be clearly known by the leader of men (505 E: δ δή διώκει μεν απασα ψυχή καὶ τούτου ένεκα πάντα πράττει). conception of an aim of life above every kind of pleasure and happiness, even above knowledge and wisdom (509 A), is new, and arises here as a consequence of the new knowledge of ideas and their hierarchy leading to the one highest principle of Being.

Some hints show us Plato's educational experience at Traces of the time when he wrote this part of the Republic. says that the young must be taught through play (537 A: παίζοντας τρέφε), and warns us that no teacher should treat his pupils as slaves (536 Ε : οὐδὲν μάθημα μετὰ δουλείας του έλεύθερου χρη μανθάνειν . . . ψυχή βίαιον οὐδὲν ἔμμονον μάθημα) because knowledge is never durable if imposed by violence. Plato is so confident as to the power of youth that he credits the young with the greatest labours and undertakings (536 D: νέων πάντες οἱ μεγάλοι καὶ οί πολλοὶ πόνοι), but he has already experienced the Judgment logical abuses of youth, which he complains of later in the dialectical dialogues. Young men are not serious in reasoning, and delight in contradictions, playing with the argument like young dogs with our clothes (539 B). Here again, as in the Phaedo, Plato sees the origin of scepticism in the abuse of reasoning:

teaching activity.

about youth. Logical abuse leading to scepticism.

Phaedo 90 B: ἐπειδάν τις πιστεύση λόγφ τινὶ άληθεί είναι . . . κάπειτα όλίγον υστερον αὐτώ δόξη ψευδής είναι . . . καὶ αὐθις ετερος καὶ έτερος . · · τελευτώντες οιονται . . . οὐδὲν ὑγιὲς οὐδὲ βέβαιον.

Rep. 589 BC: ὅταν πολλοὺς μὲν αὐτοὶ ἐλέγξωσιν, ὑπὸ πολλών δὲ έλεγχθώσι, σφόδρα καὶ ταχὺ έμπίπτουσιν είς τὸ μηδέν ήγεισθαι ωνπερ πρότερον.

It is characteristic that this abuse was explained in a general and somewhat lengthy way in the Phaedo, while

Plato's view of youth.

here it is briefly mentioned as well known (539 B: oluar of

Similarity of the soul to the ideas.

Relation to the Sym-posium illustrated by comparisons.

οὐ λεληθέναι) and attributed specially to the young, which confirms the impression that Plato was grown older, as in his latest works he frequently speaks of the inconsequence of youth (cf. Phil. 15 DE). Some minor coincidences between this part of the Republic and the earlier dialogues may be briefly mentioned. The affinity of the soul to the ideas, affirmed in the Phaedo, is here shortly referred to (490 B : αὐτοῦ δ ἔστιν ἐκάστου τῆς φύσεως άψασθαι ὁ προσήκει ψυχής ἐφάπτεσθαι τοῦ τοιούτου. προσήκει δε ξυγγενεί), with the difference that according to the new division of faculties only a part of the soul is distinguished by this affinity. The metaphor λήγειν ώδινος, used in this passage to describe the suffering of a soul in search of the Truth, would be scarcely natural in this abridged and familiar form if the theory of intellectual fecundity in the Symposium were not assumed as known (Symposium 209 A). A similar allusion to the Symposium appears in the assertion of the fewness of those who are able to seek the idea of Beauty, and to follow when they are led to it:

Symp. 210 A: δεῖ τὸν ὀρθῶς ἰόντα ἐπὶ τοῦτο τὸ πρᾶγμα . . . ἐὰν ὀρθῶς ἡγῆται ὁ ἡγούμενος . . . κατανοῆσαι ὅτι τὸ κάλλος τὸ ἐπὶ ὁτφοῦν σώματι τῷ ἐπὶ ἑτέρῳ σώματι ἀδελφόν ἐστιν . . .

Rep. 476 C: ὁ καλὰ μέν πράγματα νομίζων, αὐτὸ δὲ κάλλος μήτε νομίζων μήτε, ἄν τις ἡγῆται ἐπὶ τὴν γνῶσιν αὐτοῦ, δυνάμενος ἔπεσαι, ὄναρ ἡ ὕπαρ δοκεῖ σοι ζῆν;

Progress beyond earlier dialogues. It would be useless to enumerate all such hints, which become convincing to anybody who reads the dialogues in the order now proposed. Only a boundless indifference to the philosophical contents of Plato's works could allow the supposition that Plato wrote the *Republic* about the same time as the *Euthydemus*, while in every respect we find here a thought more mature, and a positive philosophy which was only a desideratum when he disputed with the Sophists. He now no longer appears so anxious about the bad influence of bad teachers generally, because

Milder view he has found in the fundamental differences of human of the nature a deeper reason for the natural evolution of states Sophists. as well as individuals. A weak mind is not capable either of great virtues or of great crimes (491 E: ἀσθενή δε φύσιν μεγάλων ουτε άγαθων ούτε κακών αιτίαν ποτε ἔσεσθαι). He denies that the Sophists could have the power of perverting their pupils (492 A). The eloquent Influence picture of the influence of impersonal public opinion on a of public young man (492 BC) reveals an author who is himself opinion very much above these dangers, and no longer in the first stage of his activity. All this agrees perfectly with our supposition that Plato was approaching the age of fifty when he wrote about the future reign of philosophers over the world.

on youth.

Books VIII-IX

A strange contrast to the preceding digression is Classififormed by the two next books, which resume the continuation of the fourth book broken off at the beginning of B. V, and except the recapitulation at the outset contain no direct allusion to B. V-VII. The contents of B. VIII-IX are chiefly political, and give a peculiar application of the classification of human faculties to the classification of states and the demonstration of the happiness of the philosopher. The philosopher has a better experience of the pleasures of other men than they perience can have of the pleasures of knowledge, and he alone is competent to compare different feelings and to judge teney. which of them gives the most satisfaction. Thence it results that he must be believed when he affirms that the pleasure of knowledge is the highest of all human pleasures (580 D-583 A). This demonstration, repeated afterwards by Aristotle (Ethica Nic. X. vii.), is here stated with a certain insistence, and might appear superfluous after what has been said in the seventh book on pleasure as utterly indifferent to the true aims of life.

While in the preceding books only contempt is ex-

cation of states. Happiness of philosopher demonstrated by his exand his compeTrue opinions more appreciated but always opposed to knowledge.

pressed for mere opinion as opposed to science, here true opinion and science are placed together almost as if they were synonyms (585 c). This shows not a difference of views, but a difference of exposition. The opposition of opinion and science was already so familiar to Plato when he wrote the Republic that he did not always insist upon it in his most popular writings, and the eighth and ninth books are from the nature of the subject-matter very much more popular than the sixth and seventh. author's own aim was always pure and certain science which he valued above mere opinion; but he recognised the value of right opinion above ignorance, as he had done already in the Meno. In the same passage in which he puts right opinion along with science as opposed to sensuous gratification, he makes a direct and unmistakable allusion to the theory of ideas, and even to the special account of it given in the Phaedo:

Ideas more truly existent than bodies

Phaedo 80 Β: τῷ θείφ καὶ ἀθανάτφ... καὶ ἀεὶ ὡσαύτως κατὰ ταὐτὰ ἔχοντι ἐαυτῷ ὁμοιότατον εἶναι ψυχή... 77 Δ: πάντα τὰ τοιαῦτ' εἶναι ὡς οἶόν τε μάλιστα...

Rep. 585 C: τὸ τοῦ ἀεὶ ὁμοίου ἐχόμενον καὶ ἀθανάτου καὶ ἀληθείας καὶ αὐτὸ τοιοῦτον δν καὶ ἐν τοιούτω γιγνόμενον, μᾶλλον εἶναί σοι δοκεῖ;

and can be better known. Another allusion to earlier expositions is the assertion that what continually changes is less susceptible of knowledge and truth than the eternal (585 D: τὰ περὶ τὴν τοῦ σώματος θεραπείαν γένη τῶν γενῶν αὖ τῶν περὶ τὴν τῆς ψυχῆς θεραπείαν ἦττον ἀληθείας τε καὶ οὐσίας μετέχει).

B. VIII-IX a continuation of B. II-IV. Generally this part of the *Republic* is not only formally but also in its philosophical contents a continuation of the fourth book, and seems not to refer in any way, unless perhaps at the end of B. IX, to the high metaphysical speculations of the immediately preceding sixth and seventh books.

Book X

In the tenth

This last part of the Republic is introduced at first as a supplement to the judgment on the poets proffered in

the second and third books. Plato seems to defend himself against some polemical attacks on his severe criticism esthetical of poetry, and he gives a deeper justification of his contempt by a general definition of art as an imitation. part of the tenth book has its peculiar place in the history of esthetics; we are here concerned only with the logical theories alluded to in connection with other pursuits. We see here the theory of ideas treated as familiar to all readers (596 A: είδος πού τι ξυ έκαστου είωθαμεν τίθεσθαι πεοί εκαστα τὰ πολλὰ οίς ταὐτὸν ὄνομα ἐπιφέρομεν). But in the formulation of this method we perceive a stage of the theory unknown from earlier works. Heretofore, only general mathematical, esthetical, and ethical notions were There is no trace whatever in preceding parts of Ideas of the Republic (except in the allegory of the cave, which manumay have been written later), nor in the Phaedo and Symposium, of ideas of manufactured things, or of any and every group of things bearing one name. Then the ideas were contemplated, known or found as existent. Now they are posited $(\tau i\theta \epsilon \sigma \theta a i)$; this term has been applied earlier to names (as, for instance, Crat. 384 D), but never to ideas, though a distinction of species was posited in the Phaedo (79 A: θῶμεν δύο εἴδη τῶν ὄντων). Here also we might at first suppose that £2809 means only species, as in the similar passage of the Phaedo, but in what immediately follows the word idea is used in its unmistakable technical meaning (596 B: μία ἰδέα), and applied to a table or a chair. Thus it appears that ideas of manufactured articles are admitted.

Also the popular objection to the unity of ideas is Infinity dealt with, namely, the supposition that the same process which leads to the positing of one idea could be repeated indefinitely, producing an infinity of ideas of the same thing. Plato says that God being the creator of ideas, either his will or some other necessity—of course a logical necessity-prevented the possibility of a plurality of identical ideas (597 c). This logical necessity is further fied the

considerations based on the familiar use of ideas.

factured things appear for the first time, thus initiating a change in the primitive form of the theory.

of identical ideas denied on the same grounds as Aristotle justisimplicity of perception.

One idea of each thing.

explained exactly in the same way in which Aristotle afterwards justified the simplicity of perception (Aristot. De anima iii. 2, 425 b 15 sqq.). If there were two ideas of the same thing, then the true idea would be the common type of the two primitive ideas (597 c). This would impair the perfection of ideas, and to avoid it, God, who is not a chairmaker, but the maker of the idea of a chair, made one idea of the chair (597 D: ὁ θεόs, . . . μίαν φύσει ἔφυσεν).

God as maker of ideas is a metaphor, meaning the logical necessity. Now if we consider the deeper meaning of this explanation, we recognise a certain advance beyond the *Phaedo* and perhaps even B. VI-VII. The God who makes the ideas is not the same God who is mentioned in earlier dialogues. God makes the ideas—this is a metaphorical expression which translated into abstract speech means: the ideas are a product of pure thought—not necessarily of men, but of a thinking subject. This is a consequent development of the theory about the idea of Good which was the final cause of all other ideas. Now this idea of good is supplanted by God, not by some god nor by a god, but by 'the God' ($\delta \theta \delta \delta s$). The monotheism appears well established and a matter of course.

New proof of immortality. beginning by a general statement of the conditions of indestructibility. A class of indestructible things is shown to

Also the immortality of the soul is reaffirmed, and a proof added to those of the *Phaedo*, which could hardly have been omitted in the *Phaedo* if Plato had then been in possession of it. In the *Phaedo* the problem was represented as very difficult and further research invited. Now it is an easy thing (608 D: οὐδὲν γὰρ χαλεπόν) to prove that the soul is immortal. The proof is no longer based on the ideas, but on the substantiality of the soul. Each existing thing has its own virtue and its own evil, and can be destroyed only by its own weakness and evil (609 A). If there is anything in existence which suffers from its own evil, without danger of being destroyed, as metals are by rust, then this substance, if any, is indestructible (609 B). To this description the soul is found to correspond. This kind of proof is the converse

of all the proofs given in the Phaedo. There immortality include was found as a property of the soul, through a definition the soul. of the idea of the soul. Here Plato begins by constituting a class of indestructible substances, and then shows that the soul belongs to it. We shall see that this new logical expedient is used by Plato also later, and it is certainly superior to the method of the Phaedo.

We have here an application of the principle that truth Immoris to be found in thought, that our speculation is always tality as concerned with our own ideas, and not with the things outside. Still, from our ideas we draw inferences about the things, and Plato, after representing immortality as a necessity of thought, goes a step further and concludes sion that the number of souls in the universe remains invari- about able (611 A : ἐννοείς ὅτι ἀεὶ αν είεν αι αὐταί · οὕτε γάρ ἄν number που ἐλάττους γένοιντο . . . οὖτε αὖ πλείους). This simple of souls. conclusion, which we shall find again in a later writing, was missed in the Phaedo, and leads to very important consequences.

a necessity of thought. Conclu-

In the Phaedo the unity of the soul was one of its properties because the threefold partition was not yet proposed. Now, after the repeated exposition of a division of faculties, the parts of the soul can no longer be ignored (603 A), but Plato defends himself against a misinterpretation of his view. The soul is in its true substance not full of contradictory powers (611 B). The eternal is eternal simple in its own nature, and cannot be composed out of elements many elements (611 B: οὐ ῥάδιον ἀΐδιον είναι σύνθετόν τε ἐκ πολλῶν). The partition referred to the imperfect transitory earthly state, not to the soul's eternal existence. We contemplated it under the modifications produced by union with the body, and failed to perceive its eternal nature.

Unity of soul despite its different parts. Simplicity of when set free from the bonds of the bodv.

This is a manifest correction of the theory of three- Example fold partition as taught in B. IV and IX, and exempli- of revision fies Plato's manner of revising his earlier writings. did not alter anything in what had been written, but he

writings

without any alteration in the earlier text. adds his correction in the continuation of the same dialogue, just as he added his confession of a certain exaggeration in the picture of the philosopher at the end of the seventh book. This way of correcting and criticising his own views confirms our supposition as to the technical difficulties which stood in the way of many changes in the original drafts of Plato's writings. Some other examples of such self-criticism will appear in later works, and it is exceedingly characteristic that this proceeding begins already with the *Republic*.

Subject of immortality alternatively mentioned as new and as already dealt with. Clear allusion to the Phaedo in the

Plato's habit of considering each work in turn as one independent whole is apparent from the fact that the subject of immortality is introduced in B. X as new and never heard of before (608 D: οὐκ ἤσθησαι ὅτι ἀθάιατος ἡμῶν ἡ ψυχὴ καὶ οὐδέποτε ἀπόλλυται; καὶ δε ἐμβλέψας μοι καὶ θαυμάσας εἶπε · Μὰ Δί', οὐκ ἔγωγε · σὺ δὲ τοῦτ' ἔχεις λέγειν;). Some readers of Plato saw in this passage a proof that the tenth book of the Republic had been written before the Phaedo, without noticing that a few pages later there occurs a perfectly clear allusion to the Phaedo, which cannot refer to any other work of Plato but the Phaedo only. He says (611 B): ὅτι τοίνον ἀθάνατον ψυχή, καὶ ὁ ἄρτι λόγος καὶ οἱ ἄλλοι ἀναγκάσειαν ἄν.

Phaedo
in the
tenth
book of
the
Republic.

This means that in an earlier writing there had been given a number of arguments (λόγοι) of a logically necessary or apodictic character (ἀναγκάζοντες) proving the soul's immortality. Now a plurality of such arguments is not given in any other work of Plato besides the Phaedo. The Phaedrus, which might be thought of here, contains only one argument, and other dialogues, such as the Meno, Gorgias, &c., do not contain arguments (λόγοι) but tales (μῦθοι, cf. Phaedo 61 B: the poet invents μύθους, ἀλλ' οὐ λόγους, cf. also Gorg. 523 A). That λόγος is used in the tenth book in the meaning of a logical argument can easily be seen from many passages (611 B: ὁ λόγος οὐκ ἐάσει—609 D: ἄλογον—610 A: κατὰ λόγον, &c.). Thus we see that Plato, even alluding in a general way to

Each dialogue of Plato stands apart, his earlier writings, sometimes ignored their particular contents in a new exposition. Each dialogue was meant to stand apart, as if it were written expressly for the new generation of students entering the Academy, or, in the case of the Republic, possibly for a wider circle.

The illusory character of sense perception, as represented in the Phaedo and in the earlier books of the Republic, is here maintained (602 c: ταὐτόν που ἡμῖν μέγεθος έγγύθεν τε καὶ πόρρωθεν διὰ της όψεως οὐκ ἴσον φαίνεται), and is illustrated by a skilful enumeration of optical illusions produced by distance, colouring, and reflection of light. But the distrust of the senses is no longer so unlimited as in the Phaedo, and is subject to a counting, distinct modification. We have a means of correcting their illusions, says Plato, and this consists in measuring, counting, and weighing (602 D: τὸ μετρεῖν καὶ ἀριθμεῖν καὶ ίστάναι βοήθειαι γαριέσταται . . . ώστε μη άργειν τὸ φαινόμενον . . . άλλὰ τὸ λογισάμενον). This intuition of the mathematical power of correcting the illusions of sense seems to be a Pythagorean notion, and betrays also the fact that since the first understanding of the distance between appearance and ideas Plato had been working to bridge it over partially by physical research. His programme is constantly realised in our own days, and we witness many subtle corrections of primitive sense illusions by the power of number, measure, and weighing. This power of correcting the illusions of the senses is ascribed to the cognitive faculty, which is the best part of the soul (603 A: τὸ μέτρω γε καὶ λογισμώ πιστεύον βέλτιστον αν είη της ψυχης).

The opposition between opinion and knowledge thus Four subalone remains out of the whole fabric of the four sub- divisions divisions of the cognitive faculty in B. VI-VII. opinion is here more sharply distinguished from knowledge than ever; it becomes quite another part of the soul. like feeling or desire (603 A: τὸ παρὰ τὰ μέτρα tained. δοξάζου της ψυχης τώ κατά τὰ μέτρα οὐκ ἂυ είη ταὐτόυ).

though he sometimes refers to earlier exposition.

Illusory character of the sense perception, corrected by measuring. and weighing. Physical research bridges over the distance hetween ideas and appearances. Reason corrects errors of the senses.

> of cognitive faculty not main

of terminology.

Hence opinion probably will not partake in immortality. Instability The instability of Platonic terminology at the time when he wrote the Republic is seen from the circumstance that even here, where opinion is condemned so strongly, the same word, δόξα, is used for both opinion and knowledge. in the meaning of a judgment which might be wrong or right (602 E, cf. Theaet. 190 A).

Law of contradiction 28 2 law of thought.

Here for the first time occurs a formulation of the law of contradiction as a law of thought, while in the Phaedo and earlier books of the Republic it was a metaphysical law:

Phaedo 102 E: elvai.

Rep. 486 B: ταὐτὸντάοὐδεν των εναντίων ετι ναντία ποιείν ή πάσχειν δυ οπερ ην αμα τούνα- κατά ταὐτόν γε καὶ πρὸς ντίον γίγνεσθαί τε καὶ ταὐτὸν οὐκ ἐθελήσει ãμα.

Rep. 602 Ε: ἔφαμεν τῷ αὐτῷ ἄμα περὶ ταὐτὰ έναντία δοξάζειν άδύνα-TOV elvai. Cf. Theaet. 190 A.

The user more competent than the maker. as he has the knowledge.

This is also an indication of Plato's advancing logical preoccupation. There are besides other hints of the relation of the tenth book of the Republic to earlier dialogues. Here, as in the Cratylus and Euthydemus, the competent judge about anything is he who makes a proper use of it (601 c: ὅσπερ ἐπίσταται χρῆσθαι) not the maker (601 D: πολλή ἀνάγκη τὸν χρώμενον ἐκάστω ἐμπειρότατόν τε είναι. καὶ ἄγγελου γύγυεσθαι τῷ ποιητή, οἶα ἀγαθὰ ἡ κακὰ ποιεί ἐυ τῆ χρεία ὁ χρῆται). Here this principle is generalised, while in the Cratylus it was applied specifically to wordmaking. The opposition between user and maker is parallel to the contrast between knowledge and faith (601 Ε: ό μεν είδως εξαγγέλλει περί χρηστών και πονηρών . . . ό δὲ πιστεύων ποιήσει).

Poets deprived of right opinion: Homer below Protagoras.

The poets are now shown to have neither knowledge nor even right opinion (602 A: οὖτε ἄρα εἴσεται οὖτε ὀρθὰ δοξάσει ο μιμητής περί ων αν μιμήται προς κάλλος ή Homer, who was named in the Symposium πονηρίαν). as holding the first place among those who deserved immortal fame, is now not only esteemed below Solon and Pythagoras, but even humiliated by comparison with Protagoras and Prodikos (600 c) who succeeded better in life, says Plato, because they had more knowledge than the king of poets. We see here a pitiless condemnation of what had been the chief element in Plato's own education. He knows well the temptations of the poet. and remains still poet enough to degrade poetry with poetical exaggeration. The future writer of the Laws appears here already with his boundless contempt even for the most refined pleasures, asking for deeds not words. choosing rather to deserve praise than to praise others (599 B), and proudly conscious of his own productive activity.

The style and date of the Republic.

We have found a natural progress of doctrine from Unity the beginning to the end of the Republic, but no such of the fundamental differences between the first books and their continuation as to make it necessary to recur to such adventurous suppositions as Krohn and Pfleiderer made about the composition of this work, which is remarkable for its unity in spite of its unusual volume. A comparison contents. of contents alone, however, is insufficient for a decisive solution of the question, and we must turn to our εἰωθυῖα μέθοδος of stylistic differentiation in order to find a trustworthy confirmation of the view resulting from the study of theoretical development.

As to the single books of the Republic the point of Style of main significance is the very early style of the first This has none of the important peculiarities common to all the following books, neither the scarcity of ναί, πάνυ γε, πάνυ μεν οὖν which characterises B. II-X (these answers form in B. I over one-third of all answers, peculias in Charm. Lach. Prot.)—nor τί μήν; nor arities άληθέστατα, nor ὀρθώς, nor ὀρθότατα, nor ὀρθότατα λέγεις, nor δήλον—all these being important peculiarities characterising all the following books, and missed in the first book certainly not by chance, as all the usual opportuni-

Republic resulting from the study of its

the first book very early. Many important common later books are missed

in the first book.

ties for their use were given. Also some important peculiarities which were introduced into the style of Plato in earlier dialogues, and remained up to the latest works, are absent from B. I. Such is for instance the general prevalence of superlatives over positives in all affirmative answers, common to the Phaedo with nearly all later dialogues and all books of the Republic (325), the great frequency of questions by means of \$\delta \rho a \quad (378) common to the Cratylus with all later dialogues and all other books of the Republic, new-invented adjectives in ειδής (254), beginning with the Gorgias and frequent in all parts of the Republic except B. I, $\tau \epsilon$ singly (231) frequent in all other books and occurring already even in some Socratic dialogues, interrogations asking for better explanation (453), great frequency of prepositions (390, found already in the Laches and common to all other books of the Republic with the latest group), questions by means of molos (353); many other less important peculiarities are absent from the first book, being common to all other parts of the Republic with the latest group and, in the case of the last enumerated, even with some Socratic dialogues. In the above enumeration no accidental peculiarity has been included, and of these a certain number can easily be found in the table of affinity (pp. 162-171), quoted as occurring in various parts of the Republic except in the first book.

Peculiarities of later style occurring in the first book are generally found also in earlier dialogues. If now after this long enumeration of peculiarities vainly sought for in the first book we ask what kind of peculiarities of later style are found in it, we find chiefly accidental occurrences of peculiarities known already from the earliest dialogues, and only one unique peculiarity of some importance later than the *Phaedo*, namely a double occurrence of καλῶs or a similar adverb without verb in an affirmative answer. This is the only important peculiarity common to all other parts of the *Republic*, found in the first book and not in dialogues earlier than the *Republic*. Other important peculiarities of the first

book belong to an earlier time, as for instance $\tau olvvv$ in conclusions (284) beginning with the *Crito*, frequency of apodictic answers equal to that in the *Euthydemus* (376), and $d\lambda\eta\theta\hat{\eta}$ without $\lambda\acute{e}\gamma\epsilon\iota s$ as in the *Charmides* (385). This proves the very early date of the first book, which however may still be as late as the *Gorgias*.

We cannot compare it with the Gorgias, because the latter dialogue is thrice as large, and we have no evidence as to the occurrence of the investigated peculiarities in a part of the Gorgias equal to the first book. That it is Compariearlier than the Cratylus appears very probable if we consider the great difference of the equivalent of affinity, which is sufficiently considerable to include a reasonable allowance for the difference of size:

```
Rep. a (20\frac{1}{2} \text{ pp.}): 28 (I) 6 (II) 3 (III) = 49 (I).

\rightarrow Crat. (42 pp.): 33 (I) 16 (II) 15 (III) 1 (IV) = 114 (1).
```

As here the equivalent of affinity of the later work is probable over twice as large, and more than proportional to the size, while generally the equivalent of affinity increases less than proportionally to the size, we may fairly infer that the Cratylus is later. This inference is confirmed by the fact that certain peculiarities absent from the first dialogues. book are sufficiently frequent in the Cratylus to be presumed to exist in all its parts, and therefore also in any part equal in size to Rep. I. Such are ovoía in the meaning of substance (245), adjectives in ώδης denoting causal relation (275), κατά with accusative prevailing over all prepositions except èv (389), interrogations asking for better explanation (453), new-invented adjectives in ώδης (255), and great frequency of τοίνυν (308). peculiarities, all frequent and important in the Cratylus, none is found in the Gorgias except one question asking for better explanation, and therefore they show the later date of the Cratylus, while they cannot be used for a determination of the relation between Gorgias and Rep. I. The Gorgias has only three important peculiarities (253,

compatison of
the first

of the
first book
between
these two
dialogues.

307, 377) absent from the first book of the *Republic*, which happen to be absent also from the *Cratylus*, and these have generally less importance than those found in the *Cratylus* and absent from the *Gorgias* and the first book of the *Republic*.

Thus it may be regarded as probable that the first book is earlier than the *Cratylus*, while nothing can be said from purely stylistic comparisons about its relation to the *Gorgias*, to which its contents show it to be subsequent.

Close relation between second, third, fourth, eighth, and ninth books.

As to the following books of the *Republic*, stylistic comparison proves that there is no such great distance between the first four books and the following as has been sometimes supposed by those who believed in a very early publication of the first four, five. or even six books.²³¹ The style of B. II–IV is not very different from the style of B. VIII–IX, if equal samples are compared. Take for instance B. II–B. III 412 A, slightly exceeding in size the total of B. VIII–IX. Both appear evidently later than the *Phaedo*, to which they are inferior in size:

```
Phaedo (49 pp.): 43 (I) 26 (II) 17 (III) 2 (IV) = 154 (I).

\rightarrowRep. b<sub>1.2</sub> (57½ pp.): 47 (I) 20 (II) 22 (III) 2 (IV) = 161.

\rightarrowRep. d (34 pp.): 47 (I) 22 (II) 27 (III) 3 (IV) = 184.
```

B. II-IV and B. VIII-IX differ in the comThe advance beyond the *Phaedo* is considerable if we take into account the difference of size, and also the nature of those peculiarities which are common to B. II-IX being absent from the *Phaedo*. These include nearly all the

²⁸¹ The separate publication of the first four books has been advocated by Hermann and later by Krohn, Chiappelli ('Sopra alcuni capitoli della vita di Dione di Plutarco,' Torino 1883, Rivista di filologia, anno 12), Siebeck (Jahrbücher für Philologie, Band 131, 1885, p. 229), and many others. Pfleiderer laid great stress on the division at 471 c. Teichmüller, under the influence of the prejudice about the relation of B. V to Aristophanes' Ecclesiasusae, supposed the first five books to be one whole published about 392 s.c. Finally Rudolf Kunert ('Die doppelte Recension des Platonischen Staates,' Wissenschaftliche Beilage sum Jahresbericht des Königlichen Gymnasiums su Spandau, 1893) believes that B. II-VI form one indivisible whole, published before 390 s.c.

peculiarities enumerated above as characteristically absent from the first book. Among these the following have a special prominence: τί μήν; (202), θυμοειδής as a philosophical term (261), οὐκοῦν χρή (338), ἀληθέστατα, ὀρθῶs (342), δήλον (343), δρθότατα with or without λέγεις (342, 388), ἄπειρος (473), μεθίσταμαι (488), all found in both parts of the Republic, but not in the Phaedo. On the other side B. VIII-IX contain not a single new important peculiarity absent from B. II-IV. The advance in style from the earlier to the later part is only due to a greater number of accidental peculiarities, and to an increase of the frequency of all kinds of peculiarities. Thus generally speaking B. VIII-IX belong to the same time as B. II-IV, showing a later style only to such an extent as might be expected in a continuous work of these dimensions. We have therefore no stylistic reason whatever Both parts to admit a great distance of time between the earlier and the later part, as has been also shown by the comparison of the contents. Naturally this does not imply that both parts must have been written in the same year, or in the same couple of years.

frequency of identical peculiarities.

of the Republic belong to the same time.

The intermediate part of the Republic appears to be later.

Style is changing slowly, and even the small advance in style observed may correspond to two or three years, if we allow for the whole of the Republic an average term corresponding to its size, anything between 5-7 years. As to B. V-VII, there is some stylistic evidence to place it after B. IX, at least its chief part designated in the table of affinity as c₂ (471 c-541). We find:

```
Rep. d (B. VIII-IX = 84 pp.) : 47 (I) 22 (II) 27 (III) 3 (IV) = 184.
\rightarrow Rep. c<sub>o</sub> (471 c-541 = 44 pp.) : 50 (I) 21 (II) 88 (III) 7 (IV) = 234 (I).
```

The comparison seems at first sight, in view of the difference of size, to be insufficient for chronological purposes. But if we add to B. VIII-IX a part of B. V to increase its size, then we obtain:

```
Rep. c, d (50 pp.): 62 (I) 23 (II) 86 (III) 8 = 228 (I).
→Rep. c<sub>2</sub> (44 pp.): 50 (I) 21 (II) 38 (III) 7 (IV) = 234 (I):
```

their later
date.

a small difference of few units in favour of the smaller sample of text, very significant through the prevalence of important and very important peculiarities. Some peculiarities appear in B. V-VII, which are missed alike in B. II-IV and in B. VIII-IX as in all earlier dialogues. These include γàρ οὖν in short answers (326), πŷ (332), πῶs used with ὅλος (375), κυτά separated from the corresponding accusative by τε (395), ὄντως ὄν (236), δύω (195), ἀκίνητος (469), and other words of a more accidental character. This confirms our conclusions from the contents, and makes it probable that the bulk of B. V-VII has been added later, at least after B. IX.

Relation between beginning and end of B. V uncertain. From the observations it is, however, not easy to ascertain whether the beginning of the fifth book forms one indivisible whole with the picture of the philosopher from 471 c to the end of the seventh book. The first part of the fifth book, dealing with the equality of sexes, and with international relations between Hellenes and Barbarians, might still be earlier than the eighth book, while the larger portion filling the sixth and seventh books might have been added later. This point can only be decided by a more minute comparison of a greater number of peculiarities in samples of text absolutely equal. For our purpose it has no importance whatever, as this part of the fifth book contains no contribution to the knowledge of Plato's logic.

Position of the tenth book remains uncertain, though it is probably the latest.

It is equally difficult to decide whether the tenth book is later than all parts of the *Republic*, or only later than B. VIII-IX. It contains a considerable number of peculiarities of later style for its small size, but only three accidental peculiarities are new (438, 475, 478), while B. V-IX contain a greater number of peculiarities which are absent from B. X. But a definitive solution of these difficulties can only be expected from further stylistic research. Meanwhile it remains certain that B. X is later than B. IV, probable that it is later than B. IX, and possible that it is later than all other books of the

Republic. This possibility, a mere possibility so far as our stylistic comparison reaches, becomes a probability when the contents are carefully considered.

All the parts of the Republic, except the first book, being later than the Phaedo, and differing not very much in style among each other, we may conclude that they were written continuously in the time next following the Phaedo, and as we have no reason to suppose that in that time Plato increased the speed of his writing, or course of the average amount of text produced yearly, it remains about six probable that the Republic occupied him for about six years. years, up to nearly his fiftieth year, as we supposed.

Republic written after the Phaedo in the

This refutes all the suppositions about a possibly early date 232 of the Republic, and shows that Plato wrote his great work after his return from the first Sicilian voyage, and after the foundation of the Academy. Chiappelli 231 (p. 16) believes that Plato had already formed his political convictions when he came to Syracuse. If we accept the political traditional account of his adventures, the reverse is far matters. more probable: that the personal experience and observation of the consequences resulting from the abuse of tyrannical power gave an opportunity to Plato for political reflections. This may have brought him from a position of individualistic ethics to a socialistic political theory such as is set forth in the Republic.

Voyage to Syracuse might have led Plato to reflect on

²³² Among all the artificial arguments in favour of an early date of the first books of the Republic, none has been invented with such remarkable imagination as Pfleiderer's contention, which deserves, for the sake of curiosity, to be here quoted in his own words: 'nach meiner Ansetzung in den neunziger Jahren des 4en Jahrhunderts feiert Rep. A (= '53 'according to Pfleiderer's strange designation, or B. I-V 471 c) zugleich das zweihundertjährige Jubiläum der Gesetzgebung des Solon von 594, welche ja als Leistung seines von ihm so hoch geehrten Verwandten dem Plato Zeitlebens als spornender Vorgang vorgeschwebt' (Sokrates und Plato, p. 248). Equally bold is Gymnasialdirector Carl Schmelzer (see above, p. 25, note 66) who declares that Plato did not mean seriously his political theories, and that for instance κοινά τὰ τῶν φίλων means: 'es muss jeder Mann eine jede Frau achten und schätzen als sei sie die seinige.'

II. The Phaedrus.

(Relative affinity to the latest group, measured on the *Laws* as unity, = 0.81; see above, p. 176.)

The Phaedrus shows the conditions of a philosophical rhetoric.

The Phaedrus, beyond any other work of Plato, has been misunderstood by interpreters who devoted more attention to indifferent details than to the philosophical contents of the dialogue. It has been ascribed to a young man of twenty-five, while it contains notions and theories which Plato could scarcely have advanced before he was Some critics, and among them Grote, saw in the Phaedrus an erotic dialogue, either supplementary or even preparatory to the Symposium—though the evident aim of the Phaedrus is to establish the conditions of a philosophical rhetoric, chiefly applicable to educational In the preceding dialogues we have seen Plato rising to the highest principles of knowledge without any attempt to reason about the best way of imparting them, except the few precepts given in the Republic. tacitly assumed that any one possessing knowledge can impart it to others, if they are able to receive it. We may suppose that Plato attracted chiefly very gifted pupils, and to begin with he had such a great power of teaching that he felt no need of rhetorical artifice. His eloquence, which we admire even in such early dialogues as the Apology, was the natural outburst of his genius progressing spontaneously from the Apology to the Gorgias, from the Gorgias to Symposium, Phaedo, and the dialectical books of the Republic, apparently without effort or study (Phaedr. 248 B). This explains why he contemptuously defined rhetoric in the Gorgias as a kind of flattery, and why he condemned tragic

Plato's natural eloquence made rhetoric superfluous for him.

He saw the usefulness of some His first opportunity for noticing the usefulness of some rhetorical artifice must have arisen at a time when his pupils began to teach, and he first observed that some of them, with all the knowledge inherited from the Master,

poetry in the Republic as an imitation.

were less capable of imparting it than others. Though rhetorical we admit some educational activity of Plato before the foundation of the Academy in 387 B.C., the teaching by others under his direction could scarcely have begun earlier, and even probably began later, than the first years of the existence of his own school. When the number of fested his pupils increased, and some of them had remained with him a longer time, it is natural that the elder pupils should begin to teach; and their deficiencies in teaching may have led Plato to some reflections on rhetoric, which he embodied in the *Phaedrus*. This view is here not given as a reason for the late date of the Phaedrus, but only as an explanation of the origin of this dialogue, which becomes probable when once we know its late date, as resulting from the study of its style (see above, p. 176).

rules when his pupils began to teach and manisome deficiencies in their teaching.

For the purpose of a discussion on rhetoric, Plato had to Selection select a speech as an example to illustrate his views. choice of a speech of Lysias 233 was natural, inasmuch as Lysias was thought one of the greatest rhetors of

of a speech of Lysias

283 Much erudition has been spent on the question whether the speech attributed by Plato to Lysias is authentic or only invented by Plato in imitation of other writings of this orator. We have no reason to disbelieve Plato if he clearly credits Lysias with this speech. To criticise his own invention and to accuse Lysias of the greatest moral degradation on the ground of a forged document, would certainly be below Plato's dignity. That the speech is read by Phaedrus, and not repeated from memory, adds to the probability of its authenticity, which has been maintained also by Haenisch (De oratione quae sub nomine Lysiae in Platonis Phaedro legitur, Ratibor 1825), Spengel, Franz, Westermann, Hölscher (quoted by Hermann, p. 675, note 554), L. Schmidt (Verhandlungen der 18en Philologenversammlung, Wien 1858), Ueberweg (Untersuchungen, p. 262), and by many others, while it has been opposed by Hermann and Jowett. A certainty in this question can only be arrived at by very minute stylistic comparison. So long as an evident proof of the spuriousness is not forthcoming, we must admit the authenticity. Plato has never quoted by name an author attributing to him words or opinions which were invented by himself. So far as the works alluded to by Plato are preserved, all his quotations from Homer, Parmenides, Protagoras, have been confirmed, and the natural assumption is, therefore, that he included in the Phaedrus an authentic speech of Lysias. The onus probandi is entirely on the side of those who deny it.

example of wrong rhetoric.

Choice
limited
because it
had to be
a speech
to the
young.

The second speech improves the form, the third speech the contents.

Subjectmatter secondary, and not limited to love.

Widened horizon.

those times (228 A: Λυσίας ἐν πολλῷ γρόνφ κατὰ σγολὴν συνέθηκεν, δεινότατος ών των νῦν γράφειν). The subject of the speech to be selected was accidental and secondary. It could obviously not be a forensic speech, because Plato's aim was an investigation of educational rhetoric, not of forensic oratory. He had to choose from speeches which were designed for the young, and it was not his fault that such speeches did not attain a very high moral standard. He could not select a model speech, even if one could be found outside the Socratic circle, because the artistic purpose required a sharp contrast between his rhetoric and the wrong rhetoric of contemporary orators. His choice of a discourse of Lysias, written in apology of illicit sexual relations, must be, therefore, recognised as perfectly fit and proper for the purpose. theoretical discussion followed, a better example had to be opposed to the example taken from Lysias. This better example was at first to be better in the form, and then afterwards to be made better and more elevated in the contents. Plato chose to oppose to the first speech two speeches of his own: the first on the same subject, but better composed—the second directed against the contents of both the preceding speeches. Thus it resulted as a necessity of composition that the three speeches, intended to exemplify the theory, occupied a great part of the whole writing, being nearly equal in size to the remaining dialogue.

The three speeches are avowedly examples of good and bad eloquence (262 D, cf. 264 E). The subject-matter is of secondary importance, and is by no means limited to love, since the myth in the second speech of Socrates deals even more with immortality, reminiscence, and human perfectibility than with the particular subject of love which formed the accidental starting point. We see here in every respect a very much widened horizon; in the *Phaedo* the scene of the mythical digression was limited to the earth's depths and heights, and even in

Rep. X the Earth is still the centre of interest. Here Place we see Plato, in accordance with his recommendation in of the the Republic as to the study of astronomy, taking the universe up to the fixed stars as the scene for the periodical migrations of each soul. The allegory of the cave is repeated on a much larger scale. The whole earth now takes the place of that subterraneous dwelling, and instead of of earth. the world outside the cave, where Truth can be seen as we see here earth and water, we have now the supramundane region beyond the most distant stars, a metaphorical expression which means beyond space and matter. Those who remember their vision of Truth, and act accordingly, are deemed to be mad (249 D: ἐξιστάμενος τῶν ἀνθρωπίνων σπουδασμάτων . . . νουθετείται ύπὸ τῶν πολλῶν ώς παρακινών, cf. Rep. 517 D: εἰ ἀπὸ θείων θεωριών ἐπὶ τὰ ανθρώπεια τις έλθών . . . φαίνεται σφόδρα γελοίως), because vulgar people are unable to understand philosophy.

mythical tale extended far beyond the limits

While in the Phaedo even the murderer of his father Increase could be pardoned after one year's punishment (114 A), here, as in the Republic, the period of probation lasts a thousand years after each life on earth, and a free choice of a new fate is left to each soul:

of the duration of punishments or rewards.

Rep. X 615 A: διηγείσθαι δέ άλλήλαις . . . ἀναμιμνησκομένας ὅσα τε καὶ οἶα πάθοιεν καὶ ἴδοιεν ἐν τῆ ύπὸ γης πορεία—είναι δὲ τὴν πορείαν χιλιέτη—τὰς δ' αὖ ἐκ τοῦ οὐρανοῦ εὐπαθείας διηγεῖσθαι καὶ θέας ἀμηχάνους τὸ κάλλος. . . .

617 D: προφήτην . . . λαβόντα κλήρους τε καὶ βίων παραδείγματα . . . εἰπεῖν : ψυχαὶ εἰφήμεροι . . . ύμεις δαίμονα αιρήσεσθε.

Phaedr. 249 A B: ὅταν τὸν πρῶτον βίον τελευτήσωσιν, κρίσεως έτυχον, κριθείσαι δὲ αἱ μὲν εἰς τὰ ὑπὸ γῆς δικαιωτήρια έλθοῦσαι δίκην έκτίνουσιν, αί δ' είς του ρανού τινα τόπον ύπὸ τῆς δίκης κουφισθείσαι διάγουσιν άξιως οδ εν άνθρώπου είδει εβίωσαν βίου. τῷ δὲ χιλιο στῷ ἀμφότεραι άφικνούμεναι έπὶ κλήρωσίν τε καὶ αίρεσιν του δευτέρου βίου αίρουνται δν αν θέλη έκάστη.

This denotes a deeper understanding of the responsibilities of life, and agrees with the doctrines of the latest works, such as the Timaeus and Laws.

Even the philosopher, who, according to the Phaedo, Cycle reached the happiest state immediately after death, being of ten thousand years for all souls except philosophers.

Indulgence towards persons treated severely before: Polos. Protagoras, Pericles. Anaxagoras. Isocrates. All of them being esteemed less than philosophers.

freed from the body (Phaedo 114 c: οἱ φιλοσοφία ἰκανῶς καθηράμενοι άνευ τε σωμάτων ζώσι τὸ παράπαν είς τὸν ἔπειτα γρόνον), is now obliged to return twice to life on earth in three thousand years before he can again reach perfection (Phaedr. 249 A). For other souls a cycle of ten incarnations during ten thousand years, unknown in the Republic, is now imagined at each fall into matter (249 A). shows that Plato progressed in emancipating his thought from the narrow limits of time as known on earth. see also other signs of the greater height from which earthly affairs are looked upon. Those against whom Plato wrote some of his earlier dialogues are here judged with the indulgence of one who is too sure of his superiority to deny small merits in others (247 A: φθόνος γλο έξω θείου χωροῦ ἴσταται). Thus Polos, who had been treated so severely in the Gorgias, also Protagoras, and many others (267 AB), are recognised here as inventors of certain rhetorical artifices, not quite as important as they pretended, but useful and even necessary to those who know how to use them (269 B: τὰ πρὸ τῆς τέγνης ἀναγκαῖα μαθήματα). This concession, though supplemented by the announcement that this preliminary knowledge should not be taken for the true art of rhetoric, is certainly a sign that the earlier hate is now changed into indulgent compassion. Pericles, too, who was treated with such severity in the Gorgias (516 A), is now represented as a model orator. Anaxagoras, who in the Phaedo was accused of having deceived Socrates by his unfulfilled promise of explaining everything through the power of reason, is now credited with the merit of teaching true eloquence to Pericles (270 A). In the same line comes also the very moderate recognition of Isocrates, only in so far as his character is said to be superior to that of Lysias and other orators (279 A), with the addition that even the greatest merit in this direction is infinitely inferior to true philosophy.

Contempt of poets In one respect Plato's severity remained unchanged: the poets are here placed very low in the scale of human

fates, below the gymnasts, money-makers, and sooth- as imitasayers (248 D). That poets are imitators, is here assumed without any further explanation (ποιητικός ή τῶν περὶ μίμησίν τις άλλος), as if the reader were supposed to be familiar with the tenth book of the Republic, no earlier general definition of poetry as imitation being known.234 Plato's progress from admiration of poetry to contempt of it began only after the Symposium, and was first justified in the Republic; it is manifest in the Phaedrus and all later works. Also the low place assigned to the tyrant in the ninth book of the Republic remains here unchanged (248 E).

tors presupposes Republic.

In some other respects we notice a development of earlier views. Love was in the Symposium the universal Love and creative power in nature, and is here only one of four kinds of madness; Beauty was the highest idea, and is here only one among many ideas, of which justice occupies the first place (247 D: ἐν δὲ τῆ περιόδω καθιρά μὲν αὐτὴν δικαιοσύνην, καθορά δὲ σωφροσύνην, καθορά δε ἐπι- $\sigma \tau i \mu \eta \nu \dots$), as is natural after the long dialogue on justice (276 Ε: παγκάλην, παιδιάν, ... δικαιοσύνης ... πέρι μυθο- Use of λογοῦντα). Some important terms used in the Republic are here applied as quite familiar: thus δύναμις in the meaning of a faculty (246 D: πτερού δύναμις), διαλεκτική meaning metaphysical science (never used before Plato, and by

have lost a part of their importance.

terms in troduced in the Republic.

²³⁴ In Rep. II 373 B ποιηταί are named as co-ordinate to μιμηταί, and the latter term applies to interpreters of poetry. In the third book of the Republic only a part of poetical works is done 'by imitation' (394 c: τῆs ποιήσεως . . . ή μεν διά μιμήσεως όλη έστίν, ή δε δι' άπαγγελίας αὐτοῦ τοῦ ποιητοῦ, ή δ' αδ δι' ἀμφοτέρων), the term μίμησιs being never used as a general class to which poetry belongs. This is for the first time explained in the tenth book of the Republic and then applied, in the same manner as in the Phaedrus, in the Laws (668 A: μουσικήν γε πασάν φαμεν είκαστικήν τε είναι καί μιμητικήν). Το an evidently earlier stage corresponds the definition of poetry as creation in the Symposium (205 B: ή τοι έκ τοῦ μή ὅντος εἰς τὸ δν ίδυτι δτφοῦν αίτία πασά έστι ποίησις . . . από δὲ πάσης τῆς ποιήσεως εν μόριον άφορισθέν το περί την μουσικήν και τα μέτρα τῷ τοῦ ὅλου ὀνόματι προσαγορεύεται), while in the much later subdivision of ποιητική in the Soph. 265 B, the primitive meaning of the word seems to be already forgotten, and poetry is not even named as one of the subdivisions.

Plato first in Rep. VII, cf. Phaedr. 276 E); διαλεκτικός meaning, not as in the Cratylus, Euthydemus, and in Xenophon, one who knows how to ask and answer questions, but the philosopher able to discover unity in the variety of particulars (266 B: δυνατὸν εἰς ἐν καὶ ἐπὶ πολλὰ πεφυκόθ ὁρᾶν . . . προσαγορεύω . . . διαλεκτικόν, cf. Rep. 537 c: ὁ συνοπτικὸς διαλεκτικός, cf. Crat. 390 c: ἐρωτᾶν καὶ ἀποκρίνεσθαι ἐπιστάμενον . . . διαλεκτικόν); ἀρχή as first principle of Being (Phaedr. 245 d).

Proof of the soul's immortality compared with the proofs given in the Republic and in the Phaedo.

There are two special psychological theories of the Republic which recur in the Phaedrus, and offer some opportunity for an instructive comparison. The most important is the proof given of the soul's immortality. Formally the proof differs here as in the Republic from the arguments of the Phaedo: a substance which must be necessarily immortal is first defined, and then the soul is shown to correspond to the notion thus determined. The proof given in the Phaedrus is supplementary to that of the tenth book of the Republic: there the question was asked, what can be the cause of destruction of something existing, and it had been answered by the supposition that only a thing's own weakness and evil can destroy it. Here the corresponding positive question is asked, what is the cause of life and its external manifestation-movement, and it is answered, that the true cause must be a self-moving principle, all other things moved from without having no certainty of continued movement. There the only thing which is not destroyed by its own evil was the soul; here also each self-moving principle is found to be a soul. That the proof of immortality given in the Phaedrus is the later of the two, is evident from the fact that it is the only proof recurring in the Laws, and that no other new proof is given in any later dialogue. For the purpose of a further discussion of this definitive Platonic theorem, the two similar demonstrations in Phaedrus and Laws ought to be carefully compared with the last proof given in the Republic:

Phaedrus
supplements the
tenth book
of the
Republic.

Rep. X (abbreviated). 608 p : ἀθάνατος ἡμῶν ή ψυχή καὶ οὐδέποτε απόλλυται (1).

σοντα λόγον . . .

Parallelism between the proof in the Republic and the Phaedrus.

The most striking parallelism is evident between the two first proofs. Both begin by a short statement of the theorem which has to be proved in what follows (1). Both then name a kind of things subject to destruction (2), contrasted with another indestructible kind (3). indestructibility of this second kind is then proved by elimination of other possible suppositions (4). next step in both arguments is the conclusion that a thing corresponding to the above definition is indestructible (5), and the identification of such a thing with the soul (6). This identification is brought about in the Republic by a longer digression on the possible analogies between soul and body (609 B-D) which has been here omitted. In the Phaedrus the identification of the soul with the self-moving principle is briefly introduced as a conviction of which nobody needs to be ashamed. After this identification in both passages follows the special indication of the opposition between body and soul (7), the conclusion that the soul is immortal (8), in the Phaedrus supplemented by the additional determination that it has no beginning, and the whole argument concludes by an express statement that the proof is deemed sufficient (9).

Both proofs posterior to the Phaedo. They show a greater certainty. an advance in the form

If Plato knew any one of these arguments when he wrote the Phaedo, he could not have omitted such proofs, which are far superior to anything which the dying Socrates had to offer to Simmias and Cebes. That those proofs were not yet deemed sufficient by Plato himself is seen from the exhortation at the end of the Phaedo to investigate the subject further (Phaedo 107 B: ἀναγκάζομαι άπιστίαν έτι έχειν παρ' έμαυτώ περί τών είρημένων, 88.78 Simmias, and Socrates answers: καὶ τὰς ὑποθέσεις τὰς πρώτας, καὶ εἰ πισταὶ ὑμῖν εἰσιν, ὅμως ἐπισκεπτέαι σαφέστερου) which is the opposite of the confident assertion in of expresthe Republic as well as in the Phaedrus, that the above proof is sufficient (Phaedr. 246 A: ixavôs, cf. Phaedo 101 E: ἔως ἐπί τι ἰκανὸν ἔλθοις). The logical method of beginning with the enunciation of the theorem which has to be proved, and then stating the axioms on which the than in proof rests, is also an advance beyond the method used in the the Phaedo. Thus the arguments both of the Republic Republic. and Phaedrus are clearly later than those of the Phaedo. And almost equally probable is the priority of the Republic as compared with the Phaedrus, the latter being distinguished by a greater conciseness, by the avoidance of induction based on analogy which is used in the Republic, by its deductive character based on necessities of thought, by the exact co-ordination of immortality or infinite future with an infinite past, and above all by its agreement with the only proof given in the Laws. This is Coincia point of the greatest weight: Plato laid great stress on the immortality of the soul in the Laws, and out of all his arguments in favour of this doctrine he selected the proof given in the Phaedrus as adequate (inavov) and worthy to be repeated in his latest work. This confirms our view that the Phaedrus is nearer to the Laws than the Phaedo and Republic, which are the only other works of Plato containing logical argumentation about immortality. After the Phaedrus Plato thought it superfluous to look for new arguments, and whenever he spoke about immortality he took it as well established and certain, or he added only, as in the Timaeus, mythical representations fit for popularising one of his favourite theories.

The comparison with the Laws disposes also of every In both doubt about the author's intention to apply his proof to cases the the individual soul of every man. 235 Whatever Plato

sion. carried further in the Phaedrus

dence of Phaedi us with the Laws.

individual

²³⁵ Some ancient interpreters thought that ψυχή πᾶσα means 'the whole soul in the universe,' and this artificial interpretation has been accepted also by Teichmüller (I. 63), who contends that Plato did not admit individual immortality, against the evidence of the texts. But Walbe's very special

soul is meant, as results from a comparison between Phaedo and the Laws.

thought later about the relation of individual souls to the whole or to God, there is no possible doubt that he taught individual immortality as a rational theory from the *Phaedo* up to the *Laws*. There is no need to infer with Teichmüller that those who read this teaching in Plato's works make him an adherent of atomism or monadologism. Individual souls can have a common origin and an universal direction, remaining all the same immortal, and always equal in number, as we read in the *Republic* as well as in the *Timaeus*. The Platonic doctrine was that the inward personality by no means needs the body for its existence:

Phaedo 115 CD: οὐ πείθω Κρίτωνα, ώς εἰγώ εἰμι οὕτος ὁ Σωκράτης, ὁ νυνὶ διαλεγόμενος . . . ἀλλ' οἴεταί με εκεῖνον εἶναι, δν ὄψεται δλίγον ὕστερον νεκρόν, καὶ ἐρωτά δή, πῶς με θάπτη . . . ἐπειδὰν πίω τὸ φάρμακον, οὐκέτι ὑμῖν παραμενῶ, ἀλλ' οἰχήσομαι ἀπιών . . .

Legg. 959 c: οὐδέποτε οἰκοφθορεῖν χρὴ διαφερόντως, νομίζοντα τὸν αὐτοῦ τοῦτον εἶναι τὸν τῶν σαρκῶν ὅγκον θαπτόμενον, ἀλλ' ἐκεῖνον . . . ὅντινά τις μάλισθ' ἡγεῖται ποθῶν θιπτειν, οἴχεσθαι περαίνοντα καὶ ἐμπιμπλάντα τὴν αὐτοῦ μοῖραν.

This doctrine, common to the *Phaedo* with the twelfth book of the *Laws*, unchanged in the course of thirty years and more between these writings, results with equal stringency from the *Phaedrus* as from the *Republic*, since in both the soul is opposed to the body, and immortality predicated of the pure soul.

Doctrine
of the
parts of
the soul in
Phaedrus
and
Republic.

We had to dwell at some length on these comparisons, because of their importance for the order of the dialogues, and also because they illustrate a logical progress of method. Plato's increased power of exact argumentation did not prevent him from indulging in his favourite manner of mythical allegories, as we see in the shape which he gives in the *Phaedrus* to the other chief psychological doctrine of the *Republic*, namely the three-

investigation on the use of $\pi \hat{a}s$ in Plato (see note 135) proves that here $\psi \nu \chi \lambda$ $\pi \hat{a}\sigma \alpha$ means 'each soul' or 'all individual souls,' and not, as Thompson translates, 'the vital principle in general' (Jowett: 'the soul through all her being').

fold partition of the soul. But even in this mythical shape a certain development of doctrine is noticeable.

The θυμός was defined in the Republic as τὸ ι θυμοῦται (580 D), and we have there interpreted it as the moral feeling. This interpretation finds its confirmation in the Phaedrus. Plato must have felt the terms θυμός and Wider θυμοειδές to be too narrow, and this explains why θυμοειδές determias a faculty of the soul has never been used by Plato after nation of the Republic except in the recapitulation of the Timaeus (18 A). In the Phaedrus the moral feeling is represented under the image of a beautiful and good horse of noble breeding (246 B), full of ambition, but also the lover of temperance and honour, following right opinion and amenable to reason (253 D).

the moral feeling.

This is a wider determination than that given in the Classi-Republic, and also the classification of men according to their capacities is much enlarged. There we had only of men three kinds of men, divided according to the prevalence of one or another faculty. Here we find twelve kinds of souls, each of which has its own different ideal (247 A) allegorically represented by one of the Olympian gods. in the We need not attach any special importance to the number Republic. twelve, which is here accommodated to the mythological form. But it is certainly characteristic that Plato admits a great variety of souls not only in the myth of the dialogue, but also in the following conversation (271 B: ψυγη̂ς γένη), and this reveals an enlarged view of human nature. Here, as in former writings, the philosopher is Philoplaced above all other kinds of men, as following the sopher band or chorus of Zeus (248 D: την πλείστα ίδοῦσαν είς assumed γουήν . . . φιλοσόφου, cf. 252 E). He is here named a leader of men by his very nature (252 E: φιλόσοφός τε καλ men. ήγεμονικός την φύσιν) whereby the result of the long explanation of the Republic about the leadership of philosophers is briefly assumed as certain. A still stronger sign of the increasing educational influence of Plato is that he once uses 'we' (250 B: ήμεῖε) without any nearer

exceeds thenarrow limits drawn

leader of

determination, in the meaning 'the philosophers.' The writer has already a sufficient public of readers among his pupils to feel certain that he will not be misunderstood. But he insists repeatedly on the scarcity of philosophical natures (250 A: ὀλίγαι λείπονται, αἶς τὸ τῆς μνήμης ἰκανῶς πάρεστιν, . . . 250 B: μόγις αὐτῶν καὶ ὀλίγοι ἐπὶ τὰς εἰκόνας ἰόντες θεῶνται τὸ τοῦ εἰκασθέντος γένος).

Authority
of the
philosopher
above all
other
men.

No authority is binding for the thinker but his own reason (270 c : χρή πρὸς τῷ Ἱπποκράτει τὸν λόγον ἐξετάζοντα σκοπείν, εί συμφωνεί), and the philosopher proclaims his superiority not only above the poets, as in the Republic, but above the law-givers and orators; only when they are philosophers do any of these deserve our esteem (278 c D). This contempt for the eminence of fame and vulgar opinion (274 c: ἀνθρωπίνων δοξασμάτων) shows a great distance from the Symposium. That the term φιλόσοφος is here introduced in opposition to σοφός (278 D) is a rhetorical artifice, like the novelty of immortality in the Republic, while in another passage the dialectician is compared to a god, whom even Socrates would follow with delight (266 в). Moreover, the ideal of the philosopher appears here, as later in the Laws, more and more supplanted by the ideal of a God, to whom the philosopher is similar. But in so far as any comparison of a philosopher with other men is made, the superiority of the philosopher accentuates itself more and Philosophy is divine (239 B: θεία φιλοσοφία) as in the Timaeus (47 A: φιλοσοφίας μείζου ἀγαθὸν οὖτ' ἢλθεν ούθ' ήξει ποτε τῷ θυητῷ γένει δωρηθεν ἐκ θεῶν, cf. Phil. 16 c: θεῶν εἰς ἀνθρώπους δόσις), and leads her votaries to please gods not men (274 A).

philosopher similar to God.

Ideal

Divine philo-sophy.

In the mythical part of the *Phaedrus* the ideas are still spoken of as contemplated by reason (247 c: ἡ ἀχρώματός τε καὶ ἀσχημάτιστος καὶ ἀναφὴς οὐσία ὄντως οὖσα, . . . μόνφ θεατὴ νῷ), and appear to be objective (247 D E: καθορᾶ . . . δικαιοσύνην . . . ἐπιστήμην, οὐχ ἢ γένεσις πρόσεστιν ἀλλὰ τὴν ἐν τῷ δ ἐστιν δν ὄντως ἐπιστημην οὖσαν), with

Ideas contemplated by reason not the senses. the express caution that they cannot be seen through our bodily eyes (250 D: ὄψει φρόνησις οὐχ ὁρᾶται). events the theory of an immanence of the ideas, as taught in the Symposium, and to a certain extent in the Phaedo. is supplanted by the view of a similarity or imitation of the ideas by the things which has been already indicated in the Phaedo and accepted in the Republic. The particular thing is an image of the idea (ὁμοίωμα, 250 A, B) which it imitates (251 A: θεοειδες πρόσωπον κάλλος εὖ μεμιμημένον ή τινα σώματος ίδέαν).

We must translate this metaphorical speech into Ideas as abstract thought in order to learn whether the writer of the Phaedrus continued in his belief of separate ideas. And the metaphors here used might well be applied to There are some hints pointing in this general notions. Amidst all the imagery of the space above direction. heaven appears a very dry explanation of the difference between man and animals. Man must understand general notions which are the result of the union by means of reasoning into one concept of what appears to the senses as a manifold variety (249 B: δεί ἄνθρωπον ξυνιέναι τὸ κατ' είδος λεγόμενον, έκ πολλών ίον αίσθήσεων είς εν λογισμώ ξυναιρουμένων). This is given as an explanation of the preceding metaphorical assertion that no soul is incarnated variety into the form of man without having enjoyed the supercelestial vision of true substance and science. If we follow this example set by Plato himself in the interpretation of his allegories, we soon get quit of the riddle of self-existing ideas. Plato does not require us to take his mythical allegories literally: he says clearly that he does not insist on everything said in the myth (265 B: ἴσως μεν άληθοῦς τινος εφαπτόμενοι, τάχα δ' αν καὶ άλλοσε παραφερόμενοι, κεράσαντες οὐ παντάπασιν ἀπίθανον λόγον, μυθικόν τινα υμνον προσεπαίσαμεν μετρίως τε και ευφήμως), and confesses to have mixed truth with fiction. Thus we Metaphors are at liberty to interpret the allegories and to distinguish truth from fiction. That 'beyond the limits of the stars ideas

models of Being might well be identical with general notions. Faculty of perceiving unity of species in the of appearprivilege of man.

to general notions.

could refer exist pure ideas without shape or colour, intangible and invisible, not fixed in sensible particulars, but free and independent,' means only: that pure concepts of reason are never fully realised in the things to which they apply, as for instance, absolute equality is never found identical with physical equality. Our interpretation is appliable even to the ideas of the

> Phaedo, though there we had not such an express authorisation of free interpretation as in the Phaedrus, where the whole mythical account is called a pleasant play (265 c: φαίνεται τὰ μὲν ἄλλα τῷ ὄντι παιδιᾶ πεπαῖσθαι) in which the only serious thing is the double way from particular things to the general idea, and from the idea to all its particular kinds. Here idéa and ellos are used in a meaning which is identical with the idea as conceived by Kant, a necessary concept of reason. The synthetic union of scattered particulars is clearly a condition of consistent definition for the purposes of teaching (265 D: είς μίαν τε ίδέαν συνορώντα άγειν τὰ πολλαχή διεσπαρμένα, ίνα έκαστον οριζόμενος δήλον ποιή, περί ου αν αεί διδάσκειν iθέλη . . .). The test of self-consistency is already stated in the first Socratic speech as the indispensable condition of knowledge (237 c: τούς πολλούς λέληθεν ότι οὐκ ἴσασι την ουσίαν εκάστου : ώς ουν είδότες ου διομολογούνται εν άργη της σκέψεως, προελθόντες δε . . . οὖτε εαυτοίς οὖτε άλλήλοις όμολογοῦσιν). Substance is even used as a synonym of definition (245 Ε: οὐσίαν τε καὶ λόγον, cf.

Plato and of Kant.

Ideas of

Ideas formed by the study of particulars.

> not found in the particulars, nor taken from the particulars, but discovered by reason in the act of defining each particular (273 Ε: κατ' είδη διαιρείσθαι τὰ όντα καὶ μιά ίδέα καθ' ἐν ἔκαστον περιλαμβάνειν). When once a general idea is formed, it becomes the dialectician's aim to subdivide it into kinds, not artificially, but into natural kinds (265 E: τὸ πάλιν καὶ τὰ εἴδη δύνασθαι τέμνειν κατ' ἄρθρα, ἢ πέφυκεν)

270 Ε: τὴν οὐσίαν δείξει ἀκριβῶς τῆς φύσεως τούτου, πρὸς

The ideas appear as a result of the study of particulars.

δ τούς λόγους προσοίσει).

Subdivision of ideas into natural

which are distinguished from accidental parts. division and classification must proceed to the point of brings indivisibility (277 Β: πῶν ὁρίζεσθαι, ὁρισάμενός τε πάλιν κατ' είδη μέγρι τοῦ ἀτμήτου τέμνειν). This method (μέθοδος, 269 D, 270 C, D) shows the relation between each particular and the whole, neither soul nor body nor anything being other. perfectly known if studied apart from everything else (270 c: ψυγης φύσιν άξίως λόγου κατανοήσαι (άδύνατον) . . . οὐδὲ σώματος . . . ἄνευ της τοῦ ὅλου φύσεως). The first step of investigation is to ask whether a proposed object is simple or manifold, indivisible or divisible (270 D: πρῶτον μέν, ἱπλοῦν ἡ πολυειδές ἐστιν . . . δεῖ διανοεῖσθαι).

them into mutual relations to each

The method of definition and division of notions differs Transifrom the divine intuition of ideas. And along with this tion from transition from metaphysic to logic, the efficient cause, despised in the Phaedo, regains its rights. We are asked physics in the case of a simple element to investigate its active or passive capability in relation to other things (270 D: au μεν άπλοῦν ή, σκοπείν την δύναμιν αὐτοῦ, τίνα πρὸς τί πέφυκεν είς τὸ δράν έγον ή τίνα είς τὸ παθεῖν ύπὸ τοῦ), while in dealing with a compound whole, we have to divide it into Division its kinds or elements, and then to look for the activity of things and passivity of each of them (270 D: ἐἀν δὲ πλείω εἴδη έχη, ταθτα ἀριθμησάμενον, ὅπερ ἐφ' ἐνός, τοθτ' ιδεῖν ἐφ' έκάστου, τῷ τί ποιείν αὐτὸ πέφυκεν ἡ τῷ τί παθείν ὑπὸ τοῦ;). The recognition of efficient causes corresponds to the Efficient higher esteem of Anaxagoras, and to the definition of the causes soul as a self-moving principle. This removes at once all recogpossibility of believing the Phaedo to have been written later than the Phaedrus, as the importance of efficient causes is constantly recognised in all later works, for example in the Timaeus and the Laws.

to logic.

into their elements.

nised.

The Phaedrus is a work of the greatest inspiration; it contains in the most natural exposition the germs of much that was later worked out by Plato, and it betrays also a greater range of study than the Phaedo. Dialectic as a Dialectic science of Being based on definition and division is the based on

definition and division applied to teaching. leads to the greatest human happiness. fulfilment of what had been postulated in the earlier work. Its chief application is clearly shown according to the ethical rules explained in the Republic: he who knows is bound in duty to teach. The teacher writes imperishable lines in his pupil's immortal soul, imparting a living knowledge, together with the ability to defend it against errors (276 A: τοῦ εἰδότος λόγος ζων καὶ ἔμψυχος . . . γράφεται ἐν τῆ τοῦ μανθάνοντος ψυγή, δυνατός μεν αμθναι έαυτω, επιστήμων δὲ λέγειν τε καὶ σιγάν πρὸς οθς δεί). For this he requires dialectical art (276 E: τη διαλεκτική τέχνη χρώμενος) and must make a proper selection of receptive souls (λαβών ψυχὴν προσηκουσαν). Then his activity will yield eternal fruits and procure the highest happiness attainable by man (277 A: λόγους, οἱ οὐχὶ ἄκαρποι ἀλλὰ ἔχοντες σπέρμα, δθεν άλλοι εν άλλοις ήθεσι φυόμενοι τοῦτ' ἀεὶ ἀθάνατον σταρέχειν ίκανοί, τον έχοντα εύδαιμονείν ποιούντες είς δσον άνθρώπω δυνατόν μάλιστα).

Natural eloquence contrasted with the art of rhetoric.

An art of rhetoric is recognised as useful, but the essenconditions tial conditions of a good speaker are: innate ability, exercise, and knowledge of the subject on which he intends to If to these conditions we wish to add the guidance of art, then we are asked to look for much more than has been offered by rhetors and grammarians, who were able only to invent such elementary rules as are preparatory to the art, much as the rules for tuning a musical instrument are preparatory to a theory of harmony (268 E). True eloquence requires, besides a perfect knowledge of the subject dealt with (262 c), also an excellent formal arrangement of the contents (236 A). speech must consist of well-proportioned parts, and have a proper beginning as well as a suitable conclusion, with such a disposition of the contents that each part shall have

Suitable disposition of the parts of a discourse.

> ²⁸⁶ Strangely enough this knowledge (ἐπιστήμη 269 D) has been misunderstood by many interpreters as if it meant knowledge of the rules of rhetoric. Even E. Holzner ('Platos Phaedrus und die Sophistenrede des Isokrates,' Prager Studien, Heft IV. Prag 1894), who corrects the error of those who identified this ἐπιστήμη with the following τέχνη, falls into an almost worse error in asserting the identity of δπιστήμη in this passage with τὰ πρὸ τῆς τέχνης ἀναγκαῖα μαθήματα 269 B. This misconception is due to

its proper place, being the continuation of what precedes Each part and preparing what follows (264 c: μέσα καὶ ἄκρα, πρέπουτα άλλήλοις καὶ τῷ ὅλφ γεγραμμένα). A speech must not be like those verses which can be read in any order (264 D). There are rhetorical necessities which determine the placing of each part of a discourse (264 B: τὸ δεύτερον είρημένον έκ τινος ανάγκης δεύτερον τεθήναι).

from the beginning to the end has its proper place.

ception of rhetoric.

In order to arrive at this perfection, an art is required New confar above anything known heretofore by the name of rhetoric (266 D). This art will teach us to lead souls by means of speech (261 A: ψυχαγωγία διὰ λόγων) not only in tribunals and on the market place, but in every circumstance of life, small or great (261 Β: ἡ αὐτὴ σμικρῶν τε καὶ μεγάλων πέρι, καὶ οὐδὲν ἐντιμότερον τό γε ὀρθὸν περὶ σπουδαῖα $\hat{\eta}$ $\pi \epsilon \rho \hat{\iota}$ $\phi a \hat{\iota} \lambda a \gamma \iota \gamma \nu \hat{\iota} \mu \epsilon \nu o \nu$). The true speaker must begin an abuse of comparison with Isocrates' oration against the Sophists, without taking into account his later works, and earlier opinions of others:

Isocrates, in sophist. (Or. xiii.) § 17 (294 p):

δείν τον μέν μαθητήν πρὸς τῷ τὴν φύσιν ἔχειν οΐαν χρή, τὰ μὲν είδη τὰ τῶν λόγων μαθείν, περί δὲ τὰς χρήσεις αύτῶν γυμνασθηναι. (About 390 B.C.) Cf. Plato Prot 323 c: ού φύσει άλλά διδακτόν

τε καὶ ἐξ ἐπιμελείας παραγίγνεσθαι. Xenoph. Memor. II.

vi. 39: ἀρετὰς πάσας μέλλη. μαθήσει τε καὶ μελέτη

Plato, Phaedr. 269 D:

εὶ μέν σοι ὑπάρχει φύσει **ρητορικώ είναι, ἔσει ρητωρ** έλλόγιμος, προσλαβών έπιστήμην τε καί μελέτην. Cf. 237 c: eidévai deî περὶ οὖ ὰν ἢ ἡ βουλή . . . 259 Ε: ὑπάρχειν δεῖ τοῖς εὖ γε καὶ καλῶς δηθησομένοις λέγοντος διάνοιαν είδυῖαν τάληθες ων αν ερείν πέρι About 353 B.C.

Isocr. Antidosis (Or. xv.) § 187: (Steph.p. 93). δεῖ τοὺς μέλλοντας διοίσειν ή περί τούς λόγους ή περί τὰς πράξεις . . . πρώτον πρός τούτο πεφυκέναι καλώς . παιδευθήναι καὶ λαβείν την επιστήμην ήτις αν ή περί έκάστου, τρίτον δὲ ἐντριβεῖς γενέσθαι καλ γυμνασθήναι

αὐξανομένας. Ι. ί. 3: αἰ ἄρισται δοκοῦσαι εἶναι φύσεις μάλιστα παιδείας δέονται. See also Alkidamas' περί σοφιστών as quoted by Gercke (Hermes, vol. xxxii. pp. 362-364, Berlin 1897) who is, however, inclined to invert the chronological relations.

Here it is by no means certain that Plato had in view the much earlier work of Isocrates, as the three conditions of success were a commonplace and needed not to be invented by Plato or by Isocrates. Now it is very important to observe that Isocrates thought, in 390, that only the knowledge of rhetoric is required, while thirty-seven years later he agrees with Plato in asking for a knowledge of the subject. That in the Phaedrus έπιστήμη means knowledge of the subject is evident from the other passages and from the opposition of this knowledge to τέχνη.

Classification of souls and of kinds of oratory. by studying all kinds of souls and their classification (271 D: ἀνάγκη εἰδέναι ψυχὴ ὅσα εἴδη ἔχει). Plato does not enumerate here these kinds, but those enumerated by Aristotle are probably due to a great extent to Plato's teaching. The next step is to determine what can act on a soul, and what are the limits of the soul's action (271 A: ὅτφ τί ποιεῖν ἡ παθεῖν ὑπὸ τοῦ πέφυκεν). After a careful classification of souls and of kinds of oratory, a special inquiry is needed to show what kind of speech acts on each kind of soul, and why it has this power (271 B: διαταξάμενος τὰ λόγων τε καὶ ψυχῆς γένη καὶ τὰ τούτων παθήματα δίεισι τὰς αἰτίας, προσαρμόττων ἕκαστον ἑκάστφ καὶ διδάσκων, οἵα οὖσα ὑφ' οἵων λόγων δι' ἡν αἰτίαν ἐξ ἀνάγκης ἡ μὲν πείθεται, ἡ δὲ ἀπειθεῖ).

Plato did not write a handbook of rhetoric. being therein very different from Aristotle. Plato's works retain alwavs their dramatic character. They record his own oral teaching. He was

able to

speak better than

he wrote.

This clear programme of a future rhetoric has been so exactly followed up by Aristotle in his work on the same subject that probably Plato's special teaching on that matter is preserved in his pupil's exposition. Plato himself left no written system of rhetoric, because he did not write for the purpose of teaching, but for the artistic reminiscence of some new thoughts, or in order to refute the enemies of philosophy. All his works, even the Laws, preserve that character of art which is absent from the works of Aristotle. Systematic teaching was probably given by Plato to his pupils, and transmitted by them to the following generations in the Academy. But he appears not to have thought it a convenient subject for written There is some dramatic character in his exposition. works even when they contain such dry enumerations as we find in the Sophist and Timaeus. Also in the present day, though writing is so much easier, some eloquent men write little.

We may well believe Plato when he says that his eloquence was still greater than his literary skill (278 c: λέγων αὐτὸς δυνατὸς τὰ γεγραμμένα φαῦλα ἀποδείξαι), as he expressly asks every great writer to be able to speak better than he wrote. This is certainly not a common faculty,

and many great writers would disagree with Plato. judged evidently according to his own experience, and his power of oral eloquence has been unanimously praised by the tradition of his times. This explains why Plato in a much longer life wrote much less than Aristotle. Aristotle, though he owing his initiation to Plato, may have been older when he lived began to write than Plato was, since Plato at the age of longer. twenty-eight was emancipated from the influence of his teacher, while Aristotle remained under some influence of Plato up to the age of thirty-seven. If we assume that both began their literary activity about the same early age of twenty-eight, then Plato wrote during fifty-two years, and Aristotle only during thirty-four. But the extant works of Aristotle are considerably more than twice as long as all the works of Plato, though many works Difference of Aristotle are lost, while we have all the works of of Plato's This leads us to the conclusion that Aristotle wrote four or five times more copiously than Plato, and this implies a great difference of views about the use of writing. It is clear that many things written out by Aristotle were not held by Plato as fit for literary representation.

He and he wrote much less than Aristotle,

> and Aristotle's views on literary composition.

We must not judge about this from our present point of view, accustomed as we are to learn chiefly from books. In Plato's times, and in his own opinion, oral teaching stood much higher than written handbooks, and this was a natural consequence of the difficulty of writing and reproducing Plato written matter. It has been frequently argued from the celebrated passage on literary composition at the end of the Phaedrus that Plato despised writing altogether. This is certainly a very exaggerated inference. He calls This writing a play, but at the same time insists on the superiority of this philosophical play over the vulgar diversions of other people (276 p: παγκάλην παιδιάν, τοῦ έν λόγοις δυναμένου παίζειν, δικαιοσύνης τε καὶ ἄλλων ὧν λέγεις πέρι μυθολογοῦντα). Το fable about justice, as had Reference been done in the Republic, is one of the most beautiful to the

passage
of the
Phaedrus.

amusements for a divine man. There is no reason to think that Plato would not have spoken so lightly of writing after his great work. On the contrary, it is psychologically probable that he would not have spoken thus without the full consciousness of being a great writer (cf. Laws 968 E, where the same thought recurs at the end of Plato's largest work). It would not suit his artistic intention to despise writing if he had not already proved that he is a master in it, and that his contempt is not a consequence of impotence. And he has a very definite rhetorical and artistic purpose in this passage.

After an encomium on his own written myth put in the mouth of Phaedrus (257 c: τὸν λόγον δέ σου πάλοι θαυμάσας έχω), admitted even by Socrates with the poetical pretext of inspiration due to the Nymphs (263 D: ὄσω λέγεις τεγνικωτέρας Νύμφας . . . Λυσίου πρὸς λόγους είναι). it is his purpose to raise the reader's expectation to the highest pitch by announcing that this beautiful sample of written eloquence is nothing as compared with his oral teaching. The Phaedrus, like the Symposium, Euthydemus, and some other works, is written not only for the pupils, but also for those who followed wrong paths outside of the Academy, inviting them to join the School. Invitations are extended even to those about whom no hope could be left. Lysias is told to learn dialectic, and what has been held for a eulogy on Isocrates is rather an ironic invitation to learn true philosophy. Anybody who reads Isocrates' Panegyricus, written in 380 B.C., or about the same time when Plato was occupied with the Republic, will understand that Isocrates could not be flattered by such a form of recognition as that which we see in the Phaedrus.

The Phaedrus invites the reader to join the school. Invitation to learn philosophy extended to Isocrates.

The recognition was meant sincerely, as also the merits attributed to Pericles (269 A), Prodikos, Polos, Hippias (267 B), Protagoras (267 C: Πρωταγόρεια . . . πολλά καὶ καλά), even to Sophocles and Euripides (268 c)

who are named as the greatest poets, without any reference to the general low appreciation of poetry. no other work of Plato is that same spirit of benevolence and conciliation shown, and this disposition of mind is best explained after a great success, like the production of the Republic. But certainly Isocrates pretended to more than to be preferred to Lysias (279 A), to hear that 'some philosophy' is manifest in his character (279 B: ἔνεστί τις φιλοσοφία τη τοῦ ανδρος διανοία) and to be advised to take a more divine start (279 A: ὁρμὴ θειοτέρα) than his present pursuits, if he cares to do better than to excel 'in later age' all orators (279 A: οὐδὲν ἂν γένοιτο θαυμαστον προϊούσης της ηλικίας, εί . . . πλέον η παίδων διενέγκοι των πώποτε άψαμένων λόγων). This prophecy is at once shown in its relative value, when we read in continuation that there is something far greater (μείζω) than to excel all orators, something requiring a divine power, and this is nothing else than Plato's educational activity.

Spirit of benevolence and conciliation. Moderate

Moderate recognition of Isocrates could not be accepted as satisfactory by him.

Isocrates repeatedly pretends to be a representative of true philosophy (for instance *Panegyric*. § 10) and he must have felt humiliated by Plato's judgment of his relative merits. Thompson ¹⁷⁰ has shown at least one passage of the *Phaedrus* which clearly criticises a pretension of Isocrates as proffered in the *Panegyricus*:

Ισοςς. (Or. iv. p. 42 c p) Panegyr. § 8: ἐπειδὴ δ' οἱ λόγοι τοιαύτην ἔχουσι τὴν φύσιν ὥσθ' οἶόν τ' εἶναι περὶ τῶν αὐτῶν πολλαχῶς ἐξηγήσασθαι, καὶ τὰ μεγάλα ταπεινὰ ποιῆσαι καὶ τοῖς μικροῖς μέγεθος περιθεῖναι, καὶ τὰ τε παλαιὰ καινῶς διελθεῖν καὶ περὶτῶν νεωστὶ γεγενημένων ἀρχαίως εἰπεῖν, οὐκέτι φευκτέον ταῦτ' ἐστί, περὶ ὧν ἔτεροι πρότερου εἰρήκασιν, ἀλλ' ἄμεινον ἐκείνων εἰπεῖν πειρατέον.

Plato Phaedr. 267 A: Τισίαν δὲ Γοργίαν τε ἐάσομεν εὖδειν, οἱ πρὸ τῶν ἀληθῶν τὰ εἰκότα εἶδον ὡς τιμητέα μᾶλλον, τά τε αὖ σμικρὰ μεγάλα καὶ τὰ μεγάλα σμικρὰ φαίνεσθαι ποιοῦσιν διὰ ρώμην λόγου καινά τε ἀρχαίως τά τ' ἐναντία καινῶς, συντομίαν τε λύγων καὶ ἄπειρα μήκη περὶ πάντων ἀνηῦρον; ταῦτα δὲ ἀκούων ποτέ μου Πρόδικος ἐγέλασεν.

Here we see that an artifice which Isocrates recommended as useful is attributed by Plato to Isocrates'

alluded to by Cicero. teacher Gorgias, and condemned by the remark that he who would follow this advice would be obliged to esteem probability more highly than truth, and deserved the laughter of Prodikos.

Mention of Isocrates as attempting a new kind of speeches refers to the *Pane-gyricus* as Teichmüller demonstrated.

This relation of the Phaedrus to the Panegyricus, already implied by Cicero (Orator, xiii. 37), and again discovered by Thompson, gives a precious chronologic indication, as the *Panegyricus* is known to have been published in 380 B.C. The date of the Phaedrus is thus indicated by an anachronism of Plato almost similar to that of the Symposium, because he puts in the mouth of Socrates the prediction that Isocrates would easily excel all orators if he continues to write such speeches as those on which he works now (279 A: λόγους, οίς νῦν ἐπιχειρεί). This 'now' cannot refer to the lifetime of Socrates, as then Isocrates wrote forensic speeches not deserving even that restricted recognition which Plato expresses in the Phaedrus. And, as Teichmüller (ignoring Thompson) demonstrated in a most convincing way, no earlier work of Isocrates than the Paneguricus could educe from Plato any appro-This is unexpectedly confirmed by Dümmler, bation. though he continues to believe in an early date of the Phaedrus (Chronologische Beiträge, p. 11). Dümmler sees in a later work of Isocrates (Antidosis, § 62) a clear allusion to a conditional approbation of the Panegyricus, though he does not refer this mention to the Phaedrus, but to the Republic (426 CDE). It is more probable that Isocrates when he wrote the Panegyricus already knew Plato's views on the relation between Hellenes and Barbarians (Rep. 470), though this cannot easily be made evident.

ference confirmed by an observation of Dümmler, though he professes another opinion as to the Phaedrus.

This in-

The date of the *Phaedrus* is one of those problems in Platonic chronology on which a great wealth of ingenious supposition has been spent in vain. The strangest of all possible errors was the thought that the *Phaedrus* could have been written in the lifetime of Socrates. This is a result of purely philological combinations, without any

Pretended early date of the Phaedrus.

consideration of the philosophical contents, which betray a date at least as late as the Republic, and undoubtedly later than the Phaedo. What reasons Diogenes Laertius had for his observation that the subject of the Phaedrus has something juvenile in it, is unknown. Probably he held with many superficial readers the subject to be illicit love, not philosophical rhetoric. In our century Schleier- Schleiermacher was the first to proclaim that the Phaedrus must macher be one of the earliest works of Plato on the ground of its philosophical poverty. He says that the philosophical contents in the Phaedrus are not yet mature for a dialectical exposition (vol. i. p. 67), for which were substituted strength of passion and questions of method. He seems of the to believe that investigations of method are particularly Phaedrus proper to the youth of a philosopher. According to such a standard Kant's Kritik might have been written thirty vears earlier than it was.

complains of the philosophical poverty

Another argument is the poetical language of the Poetical Phaedrus, which reminds Schleiermacher of the tradi-language. tion about Plato's verses which he was said to have burnt when he knew Socrates. This argument is fully refuted by the great number of stylistic coincidences with the Laws which are found in the Phaedrus. Schleiermacher sees also a sign of early date in the triumphant confid- Triumence of the dialogue. If Plato had such confidence at phant the age of twenty-five, how could he have lost it in the con-Protagoras and Meno? This question is left unanswered by Schleiermacher. The contempt of writing, argues Schleiermacher, is unthinkable in a man who has written already very much. But Plato does not despise writing contempt at all, and he states it expressly (258 D: παντὶ δήλον ὅτι of mere οὐκ αἰσχρὸν αὐτό γε τὸ γράφειν λόγους)—he despises only erudition, bad writing (ἐκεῖνο αἰσχρὸν ἤδη, τὸ μὴ καλῶς λέγειν τε καὶ not of γράφειν) and the cult of mere literary erudition (275 D: πλέον τι οιόμενος είναι λόγους γεγραμμένους τοῦ τὸν είδότα ύπομνησαι περί ών αν ή τὰ γεγραμμένα) which substitutes opinions for knowledge (275 B: πολυήκοοι γάρ σοι γενόμενοι

fidence.

literature.

άνευ διδαχής πολυγνώμονες είναι δόξουσιν . . . δοξόσοφοι γεγονότες αντί σοφών), and leads men to spend all their attention on the form, making it impossible for such mechanical writers to have a clear view of general ideas (248 Β: πολύν έχουσαι πόνον ἀτελεῖς της τοῦ ὄντος θέας ἀπέρχονται).

Mention of Isocrates is not a sign of unreserved approbation, only a recognisuperiority to other orators.

What Plato wanted, is that anybody who pretended, like Isocrates, to be named a philosopher, should be able to impart to his pupils something better than speeches corrected over and over during many years like the Panegyricus of which that rhetor was so proud. The Platonic Socrates recommends Phaedrus to say that to Lysias (278 D E), but Phaedrus asks whether the same tion of his does not apply to Isocrates, and the answer is not in the negative: more talent (279 A: τὰ τῆς φύσεως) and a nobler character (ἤθει γεννικωτέρφ) are not denied to the author of the Panegyricus, but he is left only the first place among orators, not allowed to rank among philosophers until he shall yield to a more divine inspiration.

Solemnity of style.

What Schleiermacher quotes besides as a sign of vouthfulness, an exaggerated solemnity in some passages, has been demonstrated by Campbell to be a peculiarity of later style. The mention of Polemarchos, Lysias' brother. as a pupil of Socrates appears to Schleiermacher most probable in the lifetime of Polemarchos, who was poisoned four years before Socrates (Lysias contra Eratosth. But Polemarchos is also introduced in a work §§ 17, 18). written long after his death (Rep.).

Mention of Sophocles and Euripides used by Ast as chronological indication.

Ast saw in the Phaedrus Pythagorean influence, and a great similarity to the Timaeus (pp. 106-107), but this did not prevent him from following Schleiermacher in identifying the supposed date of the conversation with the date of the composition. He added to Schleiermacher's arguments only one very curious reason: Sophocles and Euripides are spoken of as living, and therefore the Phaedrus must be written before 406 B.C. Ast did not notice that the same reasoning would lead him to place also the Timaeus and Critias before the death of Socrates.

What has been said in favour of an early date of More the Phaedrus by Krische 237 and Volquardsen, 238 who has dedicated a whole volume to the subject, is only a paraphrase of Schleiermacher with such insignificant additions as the acute observation of Krische that the death of Socrates is not alluded to in this work (this would rather speak for a late date) or the unfounded fancy of Volquardsen that the philosophical contents of the dialogue are purely Socratic. These authors have not thought it of any importance to explain why Plato in the Phaedrus despises poetry or how he could so early have arrived at the conviction of a periodic migration of souls, contradictory to the very cautious statements on future life in the Apology, Crito, and all purely Socratic dialogues.

recent defenders of the early date of the Phaedrus.

A more recent attempt to represent the *Phaedrus* as written some years before the death of Socrates has been made by Usener 239 and accepted for a time by Wilamowitz-Moellendorff,240 but the latter has expressly revoked this opinion (Hermes, vol. xxxi. p. 102).

The case of the *Phaedrus* in one respect resembles that of the Sophist. As Campbell's investigations on the Sophist have waited thirty years to be at last acknowledged by a competent authority as an 'immortal feat in Platonic chronology, '241 so Thompson's equally immortal investigations on the *Phaedrus*—published in 1868,

Thompson's edition of the Phaedrus still unknown in Germany.

but written and read in the university of Cambridge

as early as 1859—remain up to the present time a dead letter to continental philologers. Two reasons have acted in this case as well as in Campbell's: first that on the Continent nobody expects important original investigations to be buried in the Introduction and Appendices of the text edition of a single dialogue; and second that Thompson, like Campbell, did not use the confident language which is necessary to make an impression on a reader accustomed to the confidence of Schleiermacher, Hermann, Zeller, Teichmüller-and maintained even by with great such paradoxical authors as Schaarschmidt or Pfleiderer. What Teichmüller developed into an important chapter of his work, without knowing Thompson, was given by the Master of Trinity College in footnotes, with a modesty which even on a reader accustomed to the incomparable modesty of English scholars leaves an impression of incertitude.

Thompson has made it evident to the attentive reader of the four dissertations accompanying his edition of the Phaedrus (Introduction and three Appendices) that this dialogue must be written after the Panegyricus of Isocrates, that is after 380; and before the death of Lysias, that is before 378. This is such an exact determination of date as is possible only for a very few Platonic The same argument has been independently and with far greater assurance produced by Teichmüller in 1881 (Literarische Fehden, vol. i. pp. 57-82) and has never been refuted. This agrees perfectly with the place assigned by us to the Phaedrus in the development of Plato's logic, and with the limits of the probable time necessary since the Symposium for the composition of the Phaedo, Republic, and Phaedrus. That the Phaedrus must be later than Phaedo and Symposium has been also recently recognised by Th. Gomperz and must be acknowledged by all who know the investigations on the style of Plato which have so completely confirmed Thompson's view.

Both Thompson and Campbell stated their convictions modesty, which produces the impression of incertitude.

Thompson confined the date of the Phaedrus within the narrow limits of 380-378.

This agrees with the above considerations.

Yet up to the present time, many eminent German Relation scholars, as Zeller, Susemihl, W. Christ, P. Natorp and of the others, persist in the opinion that the Phaedrus is earlier Phaedrus than the Phaedo and Symposium, so that some supplementary observations on the evidence for the priority of these and other dialogues are perhaps not out of place.

to other dialogues.

As to the Phaedo, the arguments of Schulthess Relation are decisive, and Schedle,242 Liebhold,243 Kassai,244 who to the advocated the priority of the Phaedrus, were unable to Phaedo. refute them, while Bury 245 supplemented them in the best manner. The comparison of the arguments for immortality has shown equally that the Phaedrus must have been written after the Phaedo. The priority of the soul to the body appears in the Phaedo (80 A) as a new thought and is already familiar in the Phaedrus (246 B: πᾶσα ή ψυχὴ παντὸς ἐπιμελεῖται τοῦ ἀψύχου); the theory of reminiscence, which is in the Phaedo mentioned with the caution 'ε' ἀληθής ἐστιν' (72 E), is in the Phaedrus assumed as certain (250 A); that ideas or notions are the substance of things is in the Phaedo a probability (76 D: εἰ μὲν ἔστιν ἃ θρυλοῦμεν ἀεί, καλόν τε καὶ ἀγαθὸν καὶ πᾶσα ή τοσαύτη οὐσία . . . 100 Β : ὑποθέμενος εἶναί τι καλὸν αὐτὸ καθ' αὐτὸ . . .), in the Phaedrus the common inheritance of all philosophers (247 c: ή . . . οὐσία ὄντως οὖσα κυβερνητ $\hat{\eta}$ μόν ω θεατ $\hat{\eta}$ ν $\hat{\omega}$). More important points of Ueber comparison are afforded by some characteristic differences weg's obbetween Phaedo and Phaedrus, which show the Phaedrus servation in agreement with other later works. It has been observed by Ueberweg (Untersuchungen, p. 285) that an important doctrine is common to Phaedrus and Timaeus,

which led him to suppose

²⁴² F. Schedle, Die Reihenfolge der platonischen Dialoge Phaedros, Phaedon, Staat, Timaeus, Innspruck 1876.

date of the Phaedo can be interpreted otherwise.

while not yet recognised in the Phaedo, namely the axiom that what is unconditioned is indestructible, while everything that has a beginning must have an end. Ueberweg was led by this observation to place the Phaedo after the Phaedrus and Timaeus, wherein he departed from his ordinary sagacity and caution, as the natural inference would have been that the Phaedo is earlier. the more so as Phaedrus and Timaeus agree in this respect with the Laws (see above, p. 333), a fact which seems not to have been noticed by Ueberweg.

Coincidences between Phaedrus and Timaeus as compared with Phaedo.

The view of the sense perceptions offers another coincidence between Phaedrus and Timaeus against the Phaedo. In the Phaedo as well as in the Symposium true Beauty was inaccessible to the senses (Phaedo 65 D), while in the Phaedrus not only Beauty is accessible to the physical sight (250 D: κάλλος . . . δεῦρο ἐλθόντες κατειλήφαμεν δια της έναργεστάτης αισθήσεως . . . φρόνησις ούγ οράται . . κάλλος μόνον ταύτην έσχε μοίραν, ώστ' εκφανέστατον είναι καὶ ἐρασμιώτατον), but the sense perceptions lead to the formation of general notions (249 B: τὸ κατ' είδος λεγόμενου, ἐκ πολλῶν ιὸν αἰσθήσεων είς ἐν λυγισμώ ξυναιρουμένων). This agrees with the view expressed in the Timaeus metaphorically (44 B: $\pi \rho \delta s$ $\tau \delta$ κατά φύσιν ιόντων σχήμα έκάστων των κύκλων αί περιφοραί κατευθυνόμεναι, τό τε θάτερον καὶ τὸ ταὐτὸν προσαγορεύουσαι κατ' ὀρθόν, ἔμφρονα τὸν ἔχοντα αὐτὰς γιγνόμενον ἀποτελοῦσιν).

Allusion in the Phaedrus to the Phaedo and Symposium with shown for the Phaedo.

The relation of the Phaedrus to the Symposium can be easily shown by many comparisons, and it is now evident that the Phaedrus is later, though the majority of authors think otherwise. The mention that Phaedrus has been the cause of many speeches (242 A) in peculiar connection with a similar mention of Simmias (242 B) may with some probability refer to the Symposium, in preference which Phaedrus is represented (177 A) as the initiator of the series of speeches on love proposed by Ervximachos. This allusion is in so far probable as Simmias named in the same passage has in the Phaedo a principal share in

initiating the dialogue on immortality (Phaedo 61 c). And if Plato in the Phaedrus credits Simmias with a greater merit, this means that he preferred his Phaedo to the Symposium, and that he looked on both dialogues as his masterpieces, very superior to speeches of other orators (242 AB: θείος εἶ περὶ τοὺς λόγους, ὧ Φαίδρε, καὶ ἀτεχνῶς θαυμάσιος οίμαι γὰρ εγώ . . . μηδένα πλείους ή σε πεποιηκέναι γεγενήσθαι ήτοι αὐτὸν λέγοντα ή ἄλλους ενί γε τω τρόπφ προσαναγκάζοντα. Σιμμίαν Θηβαίον έξαιρῶ λόγου τῶν δὲ ἄλλων πάμπολυ κρατείς).

The mention of Lysias' brother Polemarchos as con- Mention verted to philosophy (Phaedr. 257 B) might be a direct allusion to the Republic, in which Polemarchos is represented as convinced by Socrates that nobody ought to do wrong to his enemies (Rep. 335 E). This would be an allusion similar to that which is contained in the mention of Simmias and Phaedrus, and would tend to show that Plato looked upon the persons of his dialogues as more real than their living models, who were dead when he He says at least that there is more truth in thought than in action (Rep. 473 A), and he takes many times such a liberty with Socrates that he puts in his master's mouth allusions to his own written dialogues, or even to his experiences, without any consideration whether such allusions were suitable to the historical Socrates.

Teichmüller sees (ii. pp. 22, 272) in the erotic speech of Lysias allusions to the speech of Pausanias in the Symposium, and believes the speech to have been written as a criticism of the Symposium by Lysias, thus provoking Plato's pitiless criticism in the Phaedrus. This ingenious supposition, if it could be proved, would sufficiently explain why Plato selected just this speech of Lysias as a sample of bad rhetoric, and why he criticised it with more than usual insistence and irony (243 c: ἀναιδῶν εἴρησθον τὼ λόγω . . . εν ναύταις που τεθραμμένων καὶ οὐδένα ελεύθερον ἔρωτα ἐωρακότων). The parallel passages quoted by Teichmüller deserve our attention, but they seem not to be fully

of Polemarchos' conversion might refer to the Republic

Teichmüller's supposition about the speech of Lysias uncertain unless new evidence is forthcoming.

sufficient to prove his supposition (Symp. 183 E compared with Phaedr. 231 A, 184 c with 233 A, 182 D with 234 A, 218 B with 231 D). These allusions are not quite evident, but they might be confirmed if some independent testimony about Lysias' Eroticos should ever be found: therefore they deserve to be remembered. The relation between Phaedrus and Symposium appears also in the mention occurring in the Phaedrus that physical beauty provokes an admiration which can become a germ of perfection (251 A): this seems to refer to the corresponding explanation in the Symposium (210 A).

View on poetry in both. But the most decisive argument for the priority of the Symposium turns on the difference of views about poetry. In the Symposium poets are still esteemed, in the Phaedrus the poet takes one of the lowest places, and Homer is parodied (252 B) by two verses in which the inconstancy of his gods is ridiculed.

Comparisons with earlier dialogues superfluous. It would be easy to show in the *Phaedrus* also many points of comparison with the *Cratylus*, with which it has in common a certain etymological tendency, with the *Gorgias*, which Thompson showed to be earlier when the majority of German scholars were still of the contrary opinion, and with other dialogues. But the priority of the *Gorgias* has been lately recognised by some of its former opponents, especially by Zeller, and has been made evident also by Natorp, Siebeck, Dümmler, after Socher, Stallbaum, Hermann, Steinhart, Susemihl, and Ueberweg, so that it may be admitted as sufficiently proved.²⁴⁶

Thompson's determination Thus Thompson's determination of the date of the *Phaedrus* as written between 380 and 378, or about 379 B.C., is confirmed in every respect, and not the least important of all these confirmations is given by the stylistic investi-

²⁴⁶ The recent attempt of Gercke (Platons Gorgias, erklärt von Sauppe, herausgegeben von Gercke, Berlin 1897) to prove that the Phaedrus preceded the Gorgias is based on the assumption of uncertain allusions to writings of other authors, and without regard either for the philosophical contents or for the style of these two dialogues. See above, note 286.

gations. Already Campbell found in the Phaedrus a sur- of the date prisingly large number of words common to the latest of the three dialogues, exceeding in relation to the size not only Phaedrus the number of such words to be found in the Phaedo and Symposium, but even those of the Republic, Sophist, Parmenides, and Philebus. This peculiarity of the voca-evidence. bulary of the Phaedrus has been since outweighed by other peculiarities observed, so that in our list the Phaedrus exceeds in stylistic affinity with the latest group only those works which are really earlier, as the Symposium, Phaedo, and equal samples from the Republic. The only Only part of the Republic which has a slightly greater number B. VI-VII of important peculiarities of later style than the Phaedrus is the picture of the philosophers in B. VI-VII. But the difference is too insignificant for chronological conclusions (116 peculiarities equivalent to 234 units of though affinity on 44 pp. in Rep. VI-VII against 118 peculiari- this ties equivalent to 220 units on 39 pp. in Phaedr.). The remains more so since only the greater frequency of peculiarities uncertain. occurring is superior, and not their number. This might be a consequence of the much more varied contents of the Phaedrus.

confirmed stylistic

Republic might be later.

If we compare the peculiarities of later style found in this part of the Republic only and absent from the Phaedrus and all earlier dialogues with those found in the Phaedrus and absent from the Republic, we see that the Phaedrus notwithstanding its smaller size has more exclusive affinities with the latest group than the latest part of the Republic:

Peculiarities of later style found in

Date
of the
Phaedrus
about
379 B.C.

Thus it is probable, though not yet certain, that the *Phaedrus* is later than the *Republic*, taken as a whole, and it is quite certain that the last three books of the *Republic* preceded the *Phaedrus*. This results both from stylistic comparisons and from the comparison of contents. At all events the date of the *Phaedrus* as written about 379 B.C. (380-378) is now quite as well confirmed as the date of the *Symposium* about 385 B.C.

Middle Platonism

The period of Middle Platonism produced as much as one half of the amount of text written after-wards.

We have seen that in the time between 384 and 378 B.C. Plato dedicated his leisure only to the Republic and Phaedrus, all other works being either earlier, as has been already shown with respect to those preceding the Republic, or later, as will be seen in the continuation of This short epoch of middle Platonism our inquiry. lasting up to Plato's fiftieth year produced, therefore, an amount of text equal to one half (233 pp. ed. Did.) of all the works written in the remaining thirty years of the philosopher's life (476 pp. ed. Did.). Thence it results that Plato's literary activity was on the decrease after the Phaedrus, and that he followed the maxims expressed at the end of this dialogue, according to which writing is by no means the most important of the aims of a philosopher, in contradiction to his rival Isocrates, to whom

nothing appeared more important than his written speeches, in which he pretended to teach also a philosophy, condemned by Plato.

The doctrine of the ideas, invented in the first period Doctrine after the foundation of the Academy, is maintained during the time of middle Platonism, but the same stress is no longer laid on the independent existence of the ideas, and the relation between particular things and the ideas, first designated by the term $\mu \epsilon \tau \epsilon \gamma \epsilon \iota \nu$, becomes a mere similarity (μίμημα, μιμεῖσθαι, ὁμοίωμα, ὁμοιοῦν), which the view allows us also to form ideas by the observation of simi- of a mere larities in sensible objects. In several passages the ideas and knowledge appear as created by the philosopher, though the earlier conception of a vision of self-existing ideas is not yet wholly abandoned, and reappears in the myth of the Phaedrus accompanied by its logical interpretation, according to which the ideas become identified with general notions.

of ideas during Middle Platonism developes similarity between things and ideas.

It is fully in accordance with this later stage of the Ideas not doctrine, that ideas are no longer limited as in the Symposium and Phaedo to ethical and mathematical objects, but are equally supposed to exist for manufactured things. Thus a transformation of the primitive theory of ideas is already prepared though not yet carried out. While the ideal of the first Platonic stage was a state of subjective perfection and separation from the vulgar surroundings of common life, a passive contemplation of ideas, we see in middle Platonism an increasing confidence in the necessity of applying philosophy to life, tion of and also of investigating particulars. The search for philodefinitions was a Socratic inheritance, but the fondness sophy for classifications appears not earlier than in the Republic, to life. though it is prepared by the Phaedo.

limited to ethical or mathematical notions.

This direction taken by Plato had a great influence on Logical the development of his logic. So long as only definitions classifiare sought for, the supramundane independence of ideas cations can easily be maintained. But once on the way of lead to a

recognition of the subjective element in ideas.

systematic classification it is impossible not to observe the subjective character of subdivisions, and this leads to the conclusion that the existence of ideas is only possible in a soul: not necessarily the soul of the thinker, but a soul of an individual being. The objectivity of ideas resulting from an agreement between souls is different from the objectivity based on the feeling produced by passive contemplation. The first impression of a philosopher who notices the distance between an idea and the particulars is to exaggerate the objectivity and independence of the idea, and to assert emphatically its independence and incommensurability with the particulars, which seems to imply its existence outside individual conscious-The belief in its independence of particulars is ness. lasting, because it is true, and has been proved by Plato in the Phaedo and in all following works, remaining the cardinal truth of all later philosophy, ignored only by thinkers who were not sufficiently versed in the history of logic, like Comte and Mill.

Ideas independent of particulars but not outside individual consciousness.

Logical independence of ideas the foundation of science. But the existence of ideas otherwise than in some individual consciousness is an illusion, similar to that more familiar illusion which makes colours and sounds appear objective, though they have no existence outside of us. The illusion of objective idealism is, however, one of those illusions which are necessary steps in philosophical progress. It is only a metaphoric expression of the truth that ideas are logically independent of the individual, and this logical independence ($\partial \nu \dot{\alpha} \gamma \kappa \eta$) must be recognised as a foundation of objective knowledge and science.

Plato's objective idealism lasted a short time. Thus Plato at the beginning of his logic and during the middle period of his literary activity was idealist: he believed in the objective existence of the ideas outside particulars and outside the individual soul. This belief found its clearest expression, at the beginning, in the Symposium and in the Phaedo, combined with a vague uncertainty as to the relation between things and ideas.

During middle Platonism, so far as we can guess from Already the hints given in the Republic and Phaedrus, the same less conviction was maintained with a clearer definition of the certain relation between things and ideas as consisting in their similarity. But less emphatic stress was laid on the independence, and if due allowance is made for metaphorical language, the whole mythical part of the Phaedrus may well agree with a conception of ideas in the meaning they had for Kant.

in the Republic

We need not fear to deprive Kant of his originality if we come to the conclusion that Plato towards his later age understood the ideas in very much the same way as The truth is one, and once found cannot be Kant. There is no impossibility or even improbachanged. bility in supposing that a thinker like Plato, having no thought other aim in his life than thought, arrived at a correct and Kant notion of ideas after a long educational career. It would not accibe astonishing to find the contrary. And Kant cannot lose any substantial merit in consequence of this discovery, as the notion of ideas forms only one of the points of Kant's philosophy, while in many other points he progressed. as might naturally be expected, beyond Plato and other philosophers.

Coincidence between the later stage of Plato's dental.

There is one very striking analogy between Kant and Analogy Plato. Kant undertook a critical reform of his earlier between convictions after having reached the age of fifty, and the Kant and same was the case with Plato. It is not surprising that philosophers arrive late at the full maturity of their thoughts. Every more perfect being requires a longer development, and men's childhood lasts longer than the childhood of inferior animals. A philosopher in Plato's opinion must excel other men almost to the same extent as any man is superior to other animals. This is not an extraordinary pretension, if we bear in mind that for Plato the activity of a philosopher is by no means limited to abstract thought, but extends to all departments of human life; so that he would certainly have included in

362 ORIGIN AND GROWTH OF PLATO'S LOGIC

this class some of our contemporaries, not asking them to write philosophical dissertations in order to legitimate their pride in belonging to the ruling class of mankind, formed of more perfect beings than the average citizens even in an ideal state.

CHAPTER VII

REFORM OF PLATO'S LOGIC

WE have seen in the above exposition of middle Platon- Ideas ism a theory of knowledge according to which the ideas perceived were perceived by intuition, and constituted eternal models of everything in the phenomenal world. chief point was the independence of ideas, not involving, however, their separate existence. That no phenomenal appearance can fully correspond to a pure idea is a great ances. discovery of Plato, made by the consideration of mathematical as well as moral notions. Whether such ideas have any existence out of the human mind, or generally outside an individual consciousness, was a question not discussed, and perhaps not clearly formulated by Plato: when he speaks of the beauty of ideas outside Substanthe physical universe, he does it in such metaphorical tial exlanguage, that we cannot draw certain inferences from istence of his images. The true meaning of all these visions is the ideas not conviction that ideas are independent of material things, and that the existence and changes of physical objects must be ruled by immaterial and invisible ideas, often spoken of as objects of thought.

The relation between things and ideas—whether defined as a presence or immanence of ideas in the things, or as a similarity between things and ideas, or as an imitation of ideas by particulars—was the first question that occurred when once the existence of the ideas had been established. While a personal training was deemed Existence necessary in order to attain the vision of ideas, their of ideas

by intuition and independent of appear-

certain.

evident for the initiated.

Once their existence recognised their order and hierarchy deserve the attention of the philosopher.

existence needed no other proof than the personal experience of the initiated. This initiation by means of mathematical, astronomical, or musical studies, and subsequent discussion of political or educational problems, proved a sufficient aim for many years of teaching. at last a new problem became inevitable. Suppose we have arrived at the intuitive knowledge of many ideas, and are aware of the difference between an idea and a particular object of sensible experience, the next question to ask is about the order of ideas and their mutual rela-These can be well explained only through a distinction of similarities, leading to an universal classification of notions. Already in the Republic it was asked how many kinds of reasoning are possible (532 D: 76s o τρόπος της του διαλέγεσθαι δυνάμεως, και κατά ποια δη είδη διέστηκε), but the question was left unanswered. In the Phaedrus (266 B) the complete classification of ideas from the most general kinds down to the indivisible logical units was proclaimed as the chief aim of the dialectician.

Classificatory tendency appears at a later stage. This classificatory tendency is absent from earlier works, where specific problems were discussed, without any allusion to a contemplation of all time and all existence, which we find first in the *Republic* (486 A). But even in the *Republic* the classifications and divisions are limited to a few subjects, and no attempt is made to bring all the possible objects of knowledge under a certain number of heads. Nor is this fully carried out even in the *Phaedrus*, where the importance of such a logical method is so warmly insisted upon, and the power of building up general notions and dividing them is proclaimed divine.

The dialectical dialogues carry out the programme An attempt to realise this programme is made in the series of dialectical dialogues, among which the *Theaetetus* and *Parmenides* are the earliest, as we have seen from stylistic comparisons, which are confirmed by the examination of their logical contents. They share with the

later works of this group another important peculiarity, of the the historical method of comparing impartially and Phaedrus. judging according to their merits the theories of other philosophers. The primitive theory of ideas is no longer the object of such ecstatic admiration as in the Sumposium and Phaedrus. It is subjected to a critical examination in the Parmenides and almost ignored in the Theaetetus, so much so that many readers have believed this to be an early dialogue. This impression vanishes at once upon a close consideration of some philosophical terms familiarly used both in Theaetetus and Parmenides which had been elaborated during the period of middle To these belong the notions of dialectic Platonism. (Theaet. 161 E, Parm. 135 c), of substance (ovola, Theaet. 186 D. Parm. 135 A), power or faculty (δύναμις, Theaet. 158 E, 159 A, 185 C, Parm. 133 E, 135 C), the one (Theaet. 152 D, Parm. 137 c, &c.), Not-Being (Theaet. 185 c, Parm. 142 A), and the opposition of activity and passivity (Theaet. 157 A, 174 B, Parm. 138 B).

Both Theaetetus and Parmenides have further in Both common two important distinctions, which could not have been ignored in the Republic, nor in the Phaedrus, if the author had already become familiar with them. One of these is the well-defined notion of movement. including qualitative alteration as well as change of position in space. This meaning of kivnous, accepted by Aristotle, and many later philosophers, is a result of the ment. increasing importance of this notion for Plato, and would including necessarily have been alluded to in the Republic and Phaedrus in those passages in which klynous is used in its primitive signification of movement through space. It is a far-reaching generalisation to identify movement with qualitative alteration, because both are a manifestation of change. The comparison of corresponding passages shows that this unity was not yet noticed in the period of middle Platonism:

of ideas ignored in Theaetetus criticised in Parmenides. In both occur terms elaborated

during the

preceding

period.

Theaetetus and Parmenides contain a new notion of movechange of position as well as of quality.

The distinction of two kinds of movement, first introduced in the Theaetetus. stated to be a personal discovery of the Platonic

Socrates.

We see that in the Republic the distinctions introduced in the *Theaetetus* are not yet known. The use in the Republic of kingus in its metaphorical meaning as movement of the soul is transitional to the later generalisation, but does not yet imply it. In the Phaedrus κίνησις means movement through space, and this is very characteristic if we remember that in the later dialogues the distinction of two kinds of movement is represented as quite essential. This distinction is first made in the Theaetetus, and recurs as familiar in the Parmenides and Laws (where it is assumed as a matter of course that the first movement produced is a qualitative change) as well as later in the works of Aristotle. The distinction of two kinds of movement is introduced in the Theaetetus as a new theory, after another division had been incidentally referred to. It is stated expressly to be a personal discovery of the Platonic Socrates, which he is anxious to see accepted and to share with others the risk of an error (συμμέτεχε καὶ σύ). After its acceptance, it is repeated as logically necessary (181 D: avaykaĵov). The starting point of this theory was the recognition of movement as a principle of Being, justified in the Phaedrus, mentioned as known in the Theaetetus, and finally reconciled with the stability of Being in the Sophist. This discovery is It is one related to the increasing interest for physical science, of the which is manifest through Plato's later works, while it great is absent from his earlier writings. It need hardly be generaliobserved that here we have not to do with such an ephemeral distinction as between mlotis and sikaola in the Republic, but with one of the greatest generalisations of philosophy, continually discussed by later thinkers up to Trendelenburg and Lotze. It is one of Plato's wonderful anticipations of ideas which have been better explained only in modern times. The identification of Implies physical movement with qualitative change is a truth which could scarcely be fully realised before Kant, and tivity of yet it is taken for granted in the Theaetetus, Parmenides, and Laws of Plato.

Had the Theaetetus and Parmenides, being the two List of most critical works of Plato, no other new theory than categories the inclusion of qualitative change and physical move-first ment under one primary kind, with the subtle sub- attempted division of physical movement into a movement through in the space, and revolution on the same spot—this would alone Thege. be a strong reason for placing them after Republic and tetus. Phaedrus. But we find in these two dialogues another theory of cardinal importance, yet introduced quite as incidentally as the theory of movement. In the time of middle Platonism the favourite examples of ideal existence were moral or mathematical notions, the former being specially fit for allegorical representation as objects of enthusiastic vision. When the first enthusiasm was

sations of philosophy.

by Plato

Enumeration of highest kinds independent of esthetical considerations.

A very important step in philosophy. Its importance understood by Plato. over, it became very natural to attempt a general enumeration of highest kinds, independently of the esthetical feelings of awe and admiration which first led to the perception of such ideas. This problem of categories has remained ever since a permanent department of philosophy and has been cultivated from Aristotle onwards by all logicians. But the first table of categories in the history of logic is found in Plato's Theaetetus, repeated and enlarged in his Parmenides and Sophist. It is not wrapped in such emphatic language as the sovereignty of philosophers or the precept that to suffer wrongs is better than to inflict them. It is the historian's duty to show the incomparable importance of this first step in a new direction. There is reason to believe that Plato was conscious of this importance, though he did not insist on it, because he felt the incompleteness of his table of categories (tà κοινά). The enumeration in the Theaetetus is introduced at a culminating point of the dialogue, and followed by 'an unwonted outburst of admiration' (Campbell, Theaet. p. 160) of the pupil who discovered it: also by the significant observation that a long discussion has been avoided by this happy intuition, a result of good natural capacity (144 B) and a training in mathematics, music, and astronomy (145 A) according to the precepts laid down in the Republic. A careful comparison of similar passages in later dialogues and of Aristotle's account of the same problem shows very clearly that the first attempt at such an enumeration is that occurring in the Theaetetus, not, as has been sometimes supposed, that in the Parmenides. The list is increased by some notions in the Parmenides and Sophist:

περί αὐτῶν;--οὐσίαν σεως, καὶ περί γενέρον, έτι δὲ ἐν καὶ τὸν ὑποθη ὡς ὄντος καὶ ὡς όσα τούτοις επεται, διὰ εν εκαστον των άλλων. τίνος ποτέ τῶν τοῦ θανόμεθα ; -- ύπέρευ άκο- μοιότητα καὶ πληθος λουθείς, καὶ έστιν ά καὶ τὸ έν καὶ στάσιν έρωτῶ αὐτὰ ταῦτα.

Aristoteles Categor.

Metaphus. 1029 b Timaeus, produced by 129 E: τὰ είδη, οἶον the movements of the

The first place is given in all enumerations to sub-Differ. stance and Not-Being. The same and the other, and ences in similarity and dissimilarity, are also common to the three the three enumerations. One and the many form a third pair in lists. the Theaetetus and Parmenides, but are dropped in the Sophist. A fourth pair is movement and immobility, omitted in the Theaetetus, but appearing both in Parmenides and Sophist. The differences are not necessarily due to a change of views, but to the incompleteness of enumeration, also frequent in Aristotle, who often mentions only six Categories even in passages where it would seem that the enumeration might be complete.

These highest kinds, which denote what is common Among to many particulars, are different from the ideas admired categories in the Republic. There is no place among these common Truth, notions for Truth or Beauty, nor for the idea of Good. though these are mentioned as also perceivable by the soul alone (186 A). These are not entirely supplanted by the new ideas, but they no longer attract the philosopher's chief attention. The intuitive vision of transcendental ideas is exchanged for a discursive investigation

of a given universe. This may be explained by the natural evolution of Plato's activity in his Academy.

Beauty, the Good omitted.

The training recognised to be necessary in order to develope intuition had to be directed, and the variety of

Variety of actual experience had to be submitted to classification.

material appearances, at first despised as irrelevant, had to be considered and classified. The astronomical and mathematical studies recommended in the Republic tended to promote not only dialectical ability, but also some recognition of sensible experience, and of the reality underlying physical phenomena. If in earlier times the power of the soul over the body was chiefly seen in moral determinations, it now appeared that the body, though subordinate to the soul, is a useful instrument for the purpose of increasing even ideal knowledge by forming The moral ideas, being few in number, new ideas. afforded no sufficient scope for the dialectical tendency to distinguish and classify. The field of logical exercise was first extended to a classification of states and men; but even this did not satisfy that philosophical curiosity which is accustomed to consider all substance and all time, neglecting nothing, however small or insignificant it may appear to the vulgar mind.

Extension of the field of thought beyond the limits of moral ideas.

Reform of Plato's logic carried out in the Theae-tetus and Parme-nides.

Among such pursuits, which seem to have occupied the greatest part of Plato's time after the *Phaedrus*, the general problem of knowledge was reinvestigated, and this led to an important reform of earlier logical conceptions. Of this reform we have a record in two works which more than any preceding them may be termed critical, though at first sight they appear almost as inconclusive as the Socratic dialogues. These works, the *Theaetetus* and *Parmenides*, are of decisive importance for an appreciation of Plato's philosophy, and deserve our attention not only for their main subjects, but also for seemingly casual allusions to doctrines of the greatest gravity.

I. The Theaetetus.

(Relative affinity to the latest group, measured on the Laws as unity, = 0.32; see above, p. 177.)

The aim of this dialogue is a definition of knowledge, Definiwhich, however, is not given, in spite of several unsuccessful attempts made by Theaetetus. Among the definitions which are recognised to be insufficient is one which had been provisionally received in some previous dialogues: namely, that knowledge is true opinion founded on sufficient reasons. This had been proposed given. in the Meno (98 A) and tacitly admitted in Symposium (see above, p. 238) and Phaedo, whereas it is refuted in the Theaetetus (210 A):

tion of knowledge sought in the Theaetetus not

Phaedo 96 Β: πολλάκις έμαυτὸν ανω κάτω μετέβαλλον σκοπών . . . έκ μνήμης και δόξης λαβούσης τὸ ήρεμείν ката̀ ταῦτα γίγνεσθαι έπιστήμην.

Theaet. 210 A: οῦτε ἄρα αἴσθησις, ούτε δόξα αληθής ούτε μετ' άληθοῦς δόξης λόγος προσγιγνόμενος έπιστήμη αν είη.

In the Cratylus (426 A), Symposium (202 A), and Phaedo (76 B) had the meaning of a sufficient reason, while here it is more exactly analysed, and each of its three meanings is shown to be incapable of changing opinion into knowledge. What Plato's real conviction about knowledge was, is known from the Republic, and also from later between works: for him the difference between opinion and knowledge ultimately consisted in the difference of their objects. In this respect there is no change from the Phaedo to the Theaetetus: the activity of reason is an activity of the soul, not wanting the help of the senses and of the body:

opinion and knowledge consists in the objects to which they refer.

Phaedo 65 BC: ή ψυχὴ τῆς ἀληθείας άπτεται . . . έν τφ λογίζεσθαι . . . λογίζεται δέ γέ που τότε κάλλιστα, δταν δτι μάλιστα αὐτὴ καθ' αὑτὴν γίγνηται έωσα χαίρειν τὸ σωμα.

Theaet. 186 D: έν μέν ἄρα τοῖς Knowπαθήμασινούκ ένι έπιστήμη, έν δέ τῷ περὶ ἐκείνων συλλογισμῷ· οὐσίας γάρ και άληθείας ένταῦθα μέν, ώς ξοικε, δυνατὸν ἄΨασθαι.

ledge is acquired by the

soul's own The same term is repeatedly used in both dialogues (αὐτὴ καθ' αὐτήν Phaedo 65 c, 79 D, 83 A, Theaet. 186 A, activity. 187 A) to denote the soul's independence of the body. Also the distinction between attaining knowledge and possessing it is already prepared in the Phaedo.

> Phaedo 75 D: τὸ γὰρ εἰδέναι τοῦτ' ἐστίν, λαβόντα του ἐπιστήμην έχειν καὶ μὴ ἀπολωλεκέναι.

Theaet. 197 C: δρα δή καὶ ἐπιστήμην εί δυνατόν οΰτω κεκτημένον μὴ ἔχειν.

Unity of consciousness indicated in the Republic is here

more

clearly

expressed.

But it is only here that the unity of consciousness is insisted upon, as resulting from the variety of perceptions. It had been already observed in the Republic that each sense is used only to convey one kind of impression. This observation is here generalised and affirmed as certain:

Rep. 852 Ε: ἔσθ' ὅτφ ἄν ἄλλφ ἴδοις ἡ ὀφθαλμοῖς ;—οὐ δῆτα·—τί δέ ; ακούσαις άλλφ ή ωσίν; —οὐδαμως· —οὐκοῦν δικαίως ἄν ταῦτα τούτων φαίμεν έργα είναι; πάνυ γε.

Theaet. 185 A: â δι' ἐτέρας δυνάμεως αισθάνει, αδύνατον είναι δι' άλλης ταῦτ' αἰσθέσθαι, οἶον α δι' ἀκοῆς, δι' ἄψεως, ή ά δι' ἄψεως, δι' άκοῆς ;

477 C: λέγω όψιν καὶ ἀκοὴν

των δυνάμεων είναι, εὶ ἄρα μανθάνεις δ βούλομαι λέγειν τὸ είδος.

There is a certain progress in the formulation of this principle from the Republic to the Theaetetus. earlier work the term δύναμις as appliable to the senses was first introduced: here it is used without hesitation, and the observation that it is possible to see only by means of the eyes is supplemented by the general rule: it is impossible to perceive through one faculty the proper object of another sense faculty, as can be verified through the familiar example of sight and hearing.

Senses instruments of the soul.

The application of this law of specific energy of the senses, given in the Theaetetus, goes far beyond what we found in the Republic and Phaedo. Already in those earlier works the senses were defined as instruments used by the soul, and this is here maintained:

Phaedo 79 c: ή ψυχή, ὅταν τῷ σώματι προσχρηται είς τὸ σκοπείν τι ή διὰ τοῦ ὁρᾶν ή διὰ τοῦ ακούειν ή δι' άλλης τινός αισθήσεως -τοῦτο γάρ ἐστι τὸ διὰ τοῦ σώματος, τὸ δι' αἰσθήσεων σκοπείν τι-τότε . . . πλανᾶται.

Rep. 508 B: δμμα . . . ήλιοειδέστατον των περί τὰς αἰσθήσεις δργάνων.

Theaet. 184 c : σκόπει γάρ, ἀπόκρισις ποτέρα ὀρθοτέρα, όρωμεν, τοῦτο είναι όφθαλμούς, ή δι' οδ όρωμεν, καὶ ῷ ἀκούομεν, ὧτα, η δι' οδ ακούομεν; — δι' ων εκαστα αίσθανόμεθα, ξμοιγε δοκεί, μαλλον ή οίς.-Δεινόν γάρ που, εί πολλαί τινες έν ήμιν, ώσπερ έν δουρείοις ΐπποις, αἰσθήσεις ἐγκάθηνται, ἀλλὰ μή είς μίαν τινά ίδεαν, είτε ψυχήν είτε ο τι δεί καλείν, πάντα ταύτα

ξυντείνει, ή δια τούτων οίον οργάνων αίσθανόμεθα όσα αίσθητά.

But we find here a new conclusion, not thought of before. Concep-If all senses are but instruments, they must be the in-tion of struments used by one and the same thing, be it named soul or otherwise. In earlier works Plato used the term soul as free from every ambiguity. Here we see already a trace of doubts about the existence of the soul, against which he guards himself by the caution that it does not matter whether we call by the name soul or otherwise that substance which is the necessary recipient of all particular impressions. A further proof of the existence of this substance and its peculiar activity is given by of comthe argument that impressions of different senses are paring comparable among themselves, and no single sense could bring about these comparisons. If we think about two different perceptions of two different senses, this could not be done by means of one of the senses concerned (185 A : εξ τι περὶ ἀμφοτέρων διανοεί, οὐκ αν διά γε τοῦ έτέρου οργάνου, οὐδ' αὖ διὰ τοῦ ἐτέρου περὶ ἀμφοτέρων αἰσθάνοι' Plato proceeds to give well-chosen examples of Attributes thoughts, which are possible with reference to different per- of difceptions. He observes in the first place that all perceptions have in common existence (185 A), then that they differ from each other, and are identical each with itself (185 A), then that each of them is one, and both are two (185 B), categories. and finally that there may be similarity or dissimilarity between them (186 B: εἴτε ἀνομοίω εἴτε ὁμοίω ἀλλήλοιν).

developed.

impressions of different senses.

ferent perceptions form the list of

No special faculty for perceiving categories.

This enumeration of general notions which can be applied to a variety of concrete objects is not accidental, because it is repeated by Theaetetus nearly in the same order, and forms really the most ancient table of categories. Plato asks by what faculty the soul can perceive those general notions.

The answer that such general notions can be known

They are recognised by the soul alone; though this is a truth not easy to prove.

only immediately by the soul's own activity (185 D Ε: αὐτὴ δι' αύτης ή ψυχη τὰ κοινά μοι φαίνεται περὶ πάντων ἐπισκοπείν) is received as a truth which can be at once understood only by the better class of intellects, and would require a long proof, had not this been made superfluous by the natural capacity of Theaetetus (185 E). These general notions, here distinguished as the proper object of knowledge, are placed in close relation to the particulars observed by means of the senses, and this denotes a change in Plato's attitude towards physical phenomena. He no longer despises them as in the Phaedo and Republic: he recognises the difficulty of discovering the illusions of the senses (179 c: περὶ δὲ τὸ παρὸν ἐκάστω πάθος, ἐξ ὧν αἱ αἰσθήσεις καὶ αἱ κατὰ ταύτας δόξαι γύγνονται, χαλεπώτερον έλειν ώς οὐκ άληθεις). He has made a very special study of these appearances and has arrived at surprising intuitions of physical truth. Thus for instance he states clearly that colour does not belong to objects outside us nor even to our eyes (153 D). That light is a result of movement and affects different persons in a different way, and that it is a pure quality out of space, appears to be a truth attainable only by the methods of modern physics, and yet any reader can find it in the Theaetetus (153 E: μηδέ τιν' αὐτῷ χώραν ἀποτάξης). Another of the great discoveries of our own time is here anticipated, the explanation of heat as a mode of motion (153 a: τὸ

θερμόν τε καὶ πῦρ, δ δὴ καὶ τάλλα γεννῷ καὶ ἐπιτροπεύει, αὐτὸ γεννᾶται ἐκ φορᾶς καὶ τρίψεως τοῦτο δὲ κίνησις). This is certainly said with another meaning than it might

have for the modern reader. But it betrays the fact that

Illusions of the senses difficult to discover.

Colour and heat explained as resulting from motion.

Traces of physical

Plato had already begun those physical reflections which investiled him later to the theories expounded in the Timaeus. gations.

It seems that a thorough-going materialism had made Refutaits appearance within the Academy or outside it and tion of decided him to a full refutation. For the Theaetetus, no doubt, is meant above everything as a refutation of materialism and sensualism. The materialists are mentioned as very uneducated men, not initiated into the conmysteries of a refined philosophy (155 E). With these trasted are contrasted the subtler sensualists (156 A: κομψότεροι, ών μέλλω σοι τὰ μυστήρια λέγειν) who explain everything by movement and make everything relative, destroying thus all fixed notions, which are indispensable in laying the groundwork for a system of science. Plato seems to admit so much of their theory of the relativity of sensations as agrees with his own views. He argues that the reality of dreams for the dreamer is equal to the reality of waking for men awake (158 c D), and he leaves the difficulty for the time unsolved. The same might be said of illness (158 D) and madness (157 E), but only in so far as sensations are concerned, which have always a subjective character (154 A: ἡ σὺ διϊσχυρίσαιο αν ώς, οίον under σοί φαίνεται έκαστον χρώμα, τοιούτον καὶ κυνὶ καὶ ότωούν ζώω - μὰ Δί' οὐκ ἔγωγε). This proves that true knowledge cannot be sought in sensations.

Though the true nature of knowledge is not stated in Plato's clear words as the result of the inquiry, we can easily gather from certain allusions that knowledge was no longer conceived to be a mere intuition of pre-existing ideas, but a product of the mind's activity. Knowledge is to be found in that state of the soul, in which it considers being, or in its judgments (187 A: ἐπιστήμη . . . ἐν ἐκείνο τῷ ὀνόματι, ὅ τί ποτ' ἔχει ἡ ψυχή, ὅταν αὐτὴ καθ' αύτην πραγματεύηται περί τὰ ὄντα). Here knowledge is brought under the head of δόξα, not in the meaning of opinion, but of judgment (187 A: τοῦτο καλεῖται . . . δοξάζειν). This position is not contradicted in the

material-

with a subtler sensualism which had produced some physical theories accepted by Plato. Relativity of sensations different conditions.

> view of knowledge as a kind of judg-

Thought between affirmation and negation, according to the law of contradiction.

following discussion and may be accepted as Plato's true conviction. He explains thought as a conversaas moving tion of the soul with itself (189 E: τὸ δὲ διανοείσθαι ἀρ' όπερ εγώ καλείς: -τί καλών; -λόγον δυ αὐτὴ πρὸς αύτὴν ἡ Ψυγή διεξέρχεται περί ων αν σκοπή . . . αὐτή ἐαυτήν ἐρωτωσα καὶ ἀποκρινοπένη, καὶ φάσκουσα καὶ οὐ φάσκουσα), leading to a choice between affirmation and negation, wherein judgment consists (190 A: ὅταν δὲ ὁρίσασα, . . . τὸ αὐτὸ ἤδη φη καὶ μὴ διστάζη, δόξαν ταύτην τίθεμεν αὐτῆs). This duality of affirmation and negation begins to attract Plato's attention more than ever before. The beautiful and the good are not merely associated as in Republic and Phaedrus, but paired with their opposites (186 A): so also the four pairs of categories in the same passage, and other notions (186 Β: σκληρότητα καὶ μαλακότητα, 180 D: ἐστάναι . . . κινείσθαι, &c.). Thus he quotes as one of the objects of judgment the essence of the opposition of beings among each other (186 B: την οὐσίαν της ἐναντιότητος αὐτη ή ψυχη κρίνειν πειράται), and he insists on the impossibility of identity between opposite notions (190 Β: ἀναμιμνήσκου εί πώποτ' είπες πρός σεαυτόν ὅτι παντός μάλλον . . . τὸ έτερον Έτερόν έστι).

Opposition of contradictory ideas.

Judgment is a new unity differing from its elements.

The nature of judgment is further analysed and found to be essentially different from the notions of which it consists. While according to the earlier theory the sight or intuition of ideas was knowledge, it appears now from the example of letters and syllables that the judgment is not the sum of its components, but a new unity (203 Ε: χρην γὰρ ἴσως την συλλαβην τίθεσθαι μη τὰ στοιγεία, ἀλλ' ἐξ ἐκείνων ἔν τι γεγονὸς είδος, ιδέαν μίαν αὐτὸ αὐτοῦ έγου, έτερον τῶν στοιχείων, cf. 204 A). This conception is repeated with insistence several times (203 E, 204 A, 205 C, 205 D) in order to refute the supposition that the elements can be less knowable than the whole. He who pretends to know a whole without being able to account for its parts is declared not to speak seriously (206 B: ἐάν τις φη συλ-

Knowledge of a whole

λαβην μεν γιωστόν, ἄγιωστον δε πεφυκέναι στοιχείον, εκόντα presupή ἄκοντα παίζειν ήγησόμεθ' αὐτόν, cf. Crat. 426 A). postulate, to base the knowledge of everything upon the knowledge of its ultimate elements, agrees with what has been said in the *Phaedrus* on the same subject (270 D). and corresponds to a stage in which the chief interest attaches to those notions which are built upon the obser- ideas are vation of actual appearances. The question of analysing everything into its elements or kinds was superfluous in dealing with absolute ideas which were supposed to be simple in their perfection.

It corresponds also to the new classificatory tendency Three that hoyos is distinguished into its three kinds: speech kinds of (206 D), enumeration of parts (207 A), and definition (208 E). The three degrees are declared insufficient to guarantee knowledge, but it may be taken for granted that each of them is held indispensable for knowledge. Nobody knows who cannot explain in words the object of his knowledge, enumerate its parts, and give a definition of each of its This last point is stated here with greater elements. fulness than anywhere before. Definition should consist Definiin the indication of the specific difference which distin- tion by guishes a given object from all others (208 c: τὸ ἔχειν τι σημείον είπειν ῷ τῶν ἀπάντων διαφέρει τὸ ἐρωτηθέν, . . . cf. 175 c). We are warned to avoid circular definitions, which pretend to explain a notion by its synonym (147 B, 210 A), and the enumeration of examples is also declared to be an insufficient substitute for a definition. When ledge Theaetetus began by an enumeration of different kinds of science instead of giving a definition of science, Socrates detained him and appeared to imply at this stage of the dialogue that knowledge is based on definitions (146 E: τὸ δ' ἐπερωτηθὲν οὐ τοῦτο ἡν, τίνων ἡ ἐπιστήμη, οὐδὲ ὁπόσαι τινές · οὐ γάρ ἀριθμήσαι αὐτὰς βουλόμενοι ἡρόμεθα, ἀλλὰ γνώναι ἐπιστήμην αὐτὸ ὅ τί ποτ' ἐστίν, cf. Euthyph. 5 D. 6 E; Meno 72 A). Some models of definitions are given, as for instance 'clay is moistened earth' (147 c), or 'the

poses the knowledge of its elements. while absolute simple in their perfection.

indispensable for knowledge.

tion of a specific difference, equivalent to knowat the beginning of the dialogue.

Definitions common to knowledge and opinion.

sun is the brightest of the heavenly bodies which revolve about the earth ' (208 D). Though at the end of the dialogue the definition is supposed not to be a peculiarity of knowledge alone, there is no doubt that it has been admitted as an essential condition of knowledge, common to knowledge and true opinion (209 D: περί τὴν διαφορότητα άρα καὶ ή ὀρθὴ δόξα ὰν είη ἐκάστου πέρι). It is very surprising that among the possible meanings of horos enumerated, precisely that meaning which this word appears to have in connection with knowledge for Plato (=aἰτίa) is omitted, except in one passage in the familiar phrase δυθναί τε καὶ δέξασθαι λόγον (202 c) in which λόγος is identical with sufficient reason, as in similar passages of the Cratylus (426 A), Phaedo (76 B, 95 A), and Republic (531 E). Consistency is here, as already in earlier works, expressly stated to be a necessary condition of knowledge (154 Ε: βουλησόμεθα θεάσασθαι αὐτὰ πρὸς αὐτά, τί ποτ' **ἐστὶν & διανοούμεθα, πότερον ἡμῖν άλλήλοις ξυμφωνεῖ ἡ οὐδ'** όπωστιοῦν.-200 D: τί αν αὐτὸ μάλιστα εἰπόντες ήκιστ' αν ήμεν αὐτοι̂s ἐναντιωθείμεν;), and the fixity of notions is represented as a condition of consistency (183 A) against the Heraclitean theory of eternal change of everything.

Consistency condition of knowledge.

Heraclitus refuted while the investigation of Parmenides is adjourned.

Dramatic opposition of two yiews on Being. This theory had been declared in the Cratylus to be too difficult for refutation, and only here it is refuted, while the criticism of the opposite view of Parmenides is left for a future occasion under a similar pretext to that which in the Cratylus accounted for the postponement of the criticism of the Heraclitean doctrine, namely that the philosophy of Parmenides is too deep for a superficial digression, while it would lead away from the chief purpose of the present conversation, the definition of knowledge (184 A). We see here the same dramatic opposition of two conflicting views as to the whole of universal existence, which was represented later with such pathetic solemnity in the Sophist. Only here the conflicting views are not materialism and idealism as in the Sophist, but Heracliteanism and Eleaticism (180 D E).

This comprehensive survey of the great conflicts in Historical human thought could have been reached by Plato only stand-Thus point after a full elaboration of his own philosophy. speaks the head of a school, who has pupils from all parts of the Hellenic world, and observes in them the natural tendencies towards different aims.

What has been said in the Republic about the necessary training of a philosopher is here repeatedly mentioned with reference to Theaetetus, who has been prepared for the present inquiry by mathematical, musical, and astronomical studies (145 A, c), and also, according to the recommendation given in the Republic, by investigation into stereometry (148 B). His mind corresponds in every point to what has been required from a philosopher in the Republic: he learns everything as easily as oil spreads silently over a smooth surface (144 B), and besides this intellectual development he is courageous and gentle (144 A). This picture of the natural gifts of a future philosopher agrees perfectly with that given in the Republic. Republic, as also Plato's confidence in youth expressed through the person of Theodorus (146 B: τω γάρ ὄντι ή νεότης εἰς πῶν ἐπίδοσιν ἔχει). Thus in one important point the psychological rule of earlier logic is maintained: the highest level of knowledge can be reached only by exceptional natures, which have the privilege of being born rulers and teachers of men. For the ideal of the philosopher rises above the rest of mankind, and finds its own model in the ideal of divinity, to which the philosopher approaches as near as possible (176 A : διὸ καὶ πειρᾶσθαι χρη ἐνθένδε ἐκεῖσε φεύγειν ὅ τι τάχιστα. φυγὴ δὲ ὁμοίωσις θεῷ κατὰ τὸ δυνατόν ομοίωσις δε δίκαιον και όσιον μετά φρονήσεως The philosopher is represented as indifferent to the political affairs of his country (173 D), and no stress is laid on his duty to go down into the struggles of vulgar life, and to apply his higher knowledge to the necessities lation. of his countrymen.

of the Philosopher illustrated by the Theaetetus, so as to confirm the precepts laid down in the

Philosopher near the divinity. far from the actual political life, dedicated to abstract specu-

The philosopher is here conceived in that stage of

abstract speculation which was limited in the Republic

to a few years of his life. His mind expatiates over the whole heaven, and all manifold objects forming different wholes, without caring any longer for what is near at hand (173 Ε: ή διάνοια ταθτα πάντα ήγησαμένη σμικρά και ώς οὐδεν ἀτιμάσασα πανταχή φέρεται κατά Πίνδαρον, τά τε γας υπένερθε και τα ἐπίπεδα γεωμετρούσα, ούρανοῦ τε ὕπερ ἀστρονομοῦσα, καὶ πᾶσαν πάντη φύσιν διερευνωμένη των όντων έκάστου όλου, είς των έγγυς ούδεν αύτην συγκαθιείσα). Accustomed to look upon the whole earth, he despises the greatest landowner as insignificant (174 E), and he equally thinks little of human measures of time, because he knows that even this poor earth (176 A: τόνδε τὸν τόπον) has already a past of innumerable millions of years (175 A: πάππων καὶ προγόνων μυριάδες ἐκάστφ γεγόνασιν αναρίθμητοι, έν αίς πλούσιοι και πτωχοί και βασιλής και δούλοι βάρβαροί τε και "Ελληνες πολλάκις μυρίοι γεγόνασιν ότωοῦν). We see here an horizon of thought extending beyond even that of the Phaedrus. With his wonderful intuition, Plato credits the earth with an age which modern geology for the first time made probable, and leaves far behind him those primitive chronologies which counted only thousands of years since the appearance of the first man. It is strange that acute critics, who took quite seriously the number of twenty-five ancestors quoted here as an example of σμικρολογία, and counted with the greatest care the ancestors of various contemporaries of Plato in order to ascertain whom he might have meant, did not perceive that 'innumerable myriads of generations' evidently was not a rhetorical exaggeration, but a quite serious view of Plato about the antiquity of mankind, in agreement with the cycle of ten thousand years alluded to in the Republic and the myth of the Phaedrus, but entirely absent from the Phaedo and all earlier dialogues.

views.

Reason slowly The theoretical tendency is increasing here, and the differences between men still more clearly recognised than in the Republic. Few reach a full development of reason: true knowledge can be acquired only by long endeavours under the best guidance, while man and beast alike have sense perceptions from their birth upwards (186 c). The Increasimpartial pursuit of truth is here contrasted with eristic ing discussion, and this exhortation is curiously enough put into the mouth of Protagoras, against whom Plato fought earlier not quite impartially in the dialogue bearing his Here Protagoras recommends justice in every discussion, and explains for us some of Plato's own contradictions, avowing frankly that in polemical writings Protaevery one seeks the appearance of being right, while goras inconvicting his opponent of as many errors as possible (167 Ε : ἀδικεῖν δ' ἐστὶν ἐν τῶ τοιούτω, ὅταν τις μὴ γωρὶς μὲν ώς αγωνιζόμενος τας διατριβάς ποιηται, χωρίς δε διαλεγόμενος, καὶ ἐν μὲν τῷ παίζη τε καὶ σφάλλη καθ' ὅσον αν δύνηται, $\dot{\epsilon}_{V}$ δ $\dot{\epsilon}$ τω διαλέγεσθαι σπουδάζη). If we lead a discussion with the object of arriving at the truth and sion. deal fairly with our opponent, then he accuses only himself and hates his errors, whereby he is led to philosophy, with a complete change of his former nature (168 A).

That such a purely Platonic precept should be given An as an exhortation of Protagoras to the Platonic Socrates, appears to be an expiation of earlier polemics and an announcement of that purely objective historical standpoint which we see in the dialectical dialogues. Rhetoric as an art of persuasion is here mentioned with irony but without the bitterness of the Gorgias, and more in the indulgent mood of the Phaedrus. Plato recognises the power of Rhetoric to persuade without knowledge, and sees herein an argument for the great distance separating right opinion from knowledge (201 A: οὐ διδάσκοντες, άλλα δοξάζειν ποιούντες α αν βούλωνται).

This importance attached to a distinction between right opinion and knowledge might be better appreciated if we could guess with some certainty against whom the polemic is directed. Knowledge is emphatically affirmed losophy.

seriousness of philosophical purpose.

troduced as exhorting to impartial dialectical discus-

implied confession of earlier partiality. Recognition of rhetoric. as giving beliefs without knowledge.

Rhetoric still distinguished from phito be one of the highest aims in life (148 c: ἐπιστήμη . . . τῶν ἀκροτάτων), worthy to be explained (148 d: προθυμήθητι παντὶ τρόπφ τῶν τε ἄλλων πέρι καὶ ἐπιστήμης λαβεῖν λόγον τί ποτε τυγχάνει ὄν), and giving authority to those who possess it (170 A: ἔν γε τοῖς μεγίστοις κινδύνοις . . . ιῶσπερ πρὸς θεοὺς ἔχειν . . . σωτῆρας σφῷν προσδοκῶντας, οὐκ ἄλλφ τφ διαφέροντας ἡ τῷ εἰδέναι. Cf. 171 c, 183 b c).

Changes in the logical point of view not made explicitly. Earlier statements not revoked. But categories take the place of ideas.

Although the ultimate distinction between knowledge and right opinion is not given, it results at least that there is an essential difference between them, and this consists in the systematic unity of knowledge founded on one highest principle, as has been postulated in Phaedo and Republic. It is exceedingly significant that no use of the theory of ideas as known from those dialogues has been made in the whole inquiry, and that the transition from self-existing ideas to categories of reason is made without a formal revocation of earlier views. must be recognised that these views are not entirely contradictory, and that ideas of moral notions might continue to exist along with the categories of perceptions. Only in some special cases the conflict becomes evident, as for instance if we compare some passages of the Phaedo and Theaetetus referring to a problem which was one of the starting points of the theory of ideas and which again returns here as requiring a new explanation:

Phaedo 100 E: οὐδὲ σὰ ἄρ' ἄρ ἀποδέχοιο, εἶ τίς τινα φαίη ἔτερον ἐτέρου τῆ κεφαλῆ μείζω εἶναι, καὶ τὸν ἐλάττω τῷ αὐτῷ τούτῷ ἐλάττω, 101 Δ: ἀλλὰ διαμαρτύροιο ᾶν ὅτι σὰ μὲν οὐδὲν ἄλλο λέγεις ἢ ὅτι τὸ μεῖζον τὰν ἔτερον ἐτέρου οὐδενὶ ἄλλὸ μεῖζόν ἐστιν ἢ μεγ έθει . . . μή τίς σοι ἐναντίος λόγος ἀπαντήση, ἐὰν τῆ κεφαλῆ μείζον ἀτινα φῆς εἶναι καὶ ἐλάττω, πρῶτον μὲν τῷ αὐτῷ τὸ μεῖζον μεῖζον εἶναι καὶ τὸ ἔλαττον ἔναττον, ἔπειτα τῆ κεφαλῆ σμικρῷ οὔση τὸν μείζω μείζω μείζω εἶναι.

Τheast. 1540: σμικρον λαβέ παράδειγμα, καὶ πάντα εἴσει ἃ βούλομαι. ἀστραγάλους γάρ που εξ, ἃν μὲν τέτταρας σὐτοῖς προσενέγκης, πλείους φαμὲν εἶναι τῶν τεττάρων καὶ ἡμιολίους, ἐὰν δὲ δώδεκα, ἐλάττους καὶ ἡμίσεις.

155 A: άττα ποτ' έστὶ ταῦτα τὰ φάσματα ἐν ἡμῖν; ὧν πρῶτον . . . μηδέποτε μηδὲν ἀν μείζον μηδὲ ἔλαττον γενέσθαι μήτε ὄγκῷ μήτε ἀριθμῷ, ἔως ἴσον εἴη αὐτὸ ἐαυτῷ . . . δεύτερον δέ γε, ῷ μήτε προστίθοιτο μήτε ἀφαιροῖτο, τοῦτο μήτε αὐξά-

increased.

We see here 247 that in the earlier dialogue the difficulty is stated and left ironically to wiser men for solution. In the Theaetetus the statement of the difficulty is no longer particular as in the Phaedo, but is expressly generalised, and shown to be applicable to innumerable instances, out of which one had been selected as example.

Then also the form of the statement is much sharper Form in the later work, where the problem is reduced to three of the axioms (φάσματα), two of which are in contradiction with The axioms are here said to be in the soul. the third. whereby it becomes clear that we are no longer dealing with transcendental ideas, as in the Phaedo, but with sub-While in the Phaedo only the fixity of Importiective notions. notions is insisted upon, here we see activity as a condition of change, which corresponds to the increasing the soul interest in physical science, and to the constant applica-

247 H. Jackson ('Plato's later theory of ideas: iv.' Journ. of Philol. vol. xiii, pp. 267-268) infers from this passage of the Theaetetus that 'the intervention of the idea is wholly unnecessary for a change of relations,' while in the Phaedo this intervention was held to be necessary. But really in the Phaedo there was no question of change, and only fixity of relations was sought. The notion of change and movement belongs to a later stage, prepared in the Republic, beginning with the Phaedrus, and growing in the Theaetetus and Parmenides.

tion of the opposition between ποιεῖν and πάσχειν, common to the Theaetetus with the Phaedrus.

In connection with this we find in the Theaetetus

Speculations as to the possibility of error do not lead to definitive conclusions.

No solution possible until knowledge is defined.

a general investigation into the possible conditions of error, which does not lead to a definitive conclusion, but contains very subtle distinctions and deserves our closest attention. It appears first that errors are only possible when one perception is taken for another (193 BCD) under the influence of an imperfection of sense activity (194 B: περί ων ζομεν τε και αισθανόμεθα, εν αυτοίς τούτοις στρέφεται καὶ ἐλίττεται ἡ δόξα ψευδής καὶ ἀληθής γιγνομένη) combined with thought (195 C D: ηύρηκας δη ψευδή δόξαν, ὅτι οὕτε ἐν ταις αισθήσεσίν έστι προς άλλήλας ουτ' έν ταις διανοίαις, άλλ' ἐν τῆ συνάψει αἰσθήσεως πρὸς διάνοιαν). But then an instance is adduced of errors possible without the participation of the senses (196 A B), and the difficulty is left unsettled. It results that without a definition of knowledge no definition of error can be given (200 D) and knowledge remains undefined, though Socrates remembers that in the whole discussion it had been dealt with as already known (196 Ε : μυριάκις γαρ είρήκαμεν τὸ γιγνώσκομεν καὶ ού γιγνώσκομεν, καὶ ἐπιστάμεθα καὶ οὐκ ἐπιστάμεθα, ώς τι συνιέντες άλλήλων εν ώ έτι επιστήμην άγνοοῦμεν) because dialectical discussion would be impossible without a notion of knowledge (196 Ε: τίνα τρόπον διαλέξει τούτων ἀπεχόμενος: ---οὐδένα ών γε δς εἰμί).

Theaetetus not
a Socratic
dialogue.
The inconclusive
ending
marks
a new
departure.

These fundamental problems were not yet appreciated in their whole importance in the earlier works, and their appearance in the *Theaetetus* brings us back in one respect to the Socratic stage, namely in so far as no definitive conclusion is apparently reached. But the above significant logical contents involve subtle distinctions which would be looked for in vain in the Socratic dialogues. The similarity consists only in the circumstance that here as well as there a new development of thought was beginning. This new development beginning here—with the substitution of categories for ideas, of

the individual soul for the supercelestial space, of analysis and synthesis for poetical vision, of activity and passivity for immutable identity, of critical cautiousness for poetical eloquence—is a momentous step in the history of human thought and would have required another thinker than the author of the Republic and Phaedrus, were he not of such an immense intellectual power and had he not lived so long as to initiate a new philosophical movement after the age of fifty.

Thus considered, the question of the date of the Conse-Theaetetus acquires an exceptional importance, and no consideration of evidence will be wasted, if it helps to decide the question, whether we are right in placing this dialogue after the Republic and Phaedrus. Up to the present time some of the most competent scholars agree with Zeller in believing that the Theaetetus must have been written within the first ten years after the death of Socrates, or about the same time as the Euthydemus. We have seen that this position is contradicted by the style as well as by the logical theories of our dialogue. But in view of the paramount importance of the question and of the great authority of those who are supporting an early date for the Theaetetus we are obliged to consider in detail the arguments in support of this opinion, which has been unanimously sustained by the chief writers on Plato from Tennemann, Schleiermacher, Ast, Socher, Stallbaum, Hermann, Steinhart, Susemihl up to the last editions of Zeller's Philosophie der Griechen (1889) and of Zeller in Ueberweg's Grundriss der Geschichte der Philosophie common (1894) besides many special dissertations.248 The most with many eminent supporter of an early date of the Theaetetus is

quent importance of the date of composition. which by Zeller and others is assumed to be very early.

²⁴⁸ Among these are conspicuous Natorp's Forschungen zur Geschichte des Erkenntnissproblems im Alterthum (Berlin 1884) and his paper on the Phaedrus (Philologus, 48er Band, pp. 428-449, 583-628, Göttingen 1889), wherein he looks upon the Theaetetus as preparatory to the theory of ideas. In favour of the opposite view we have, besides all those who have written on the style of Plato, also some authors who admitted a late date for the Theaetetus for other reasons, as for instance Munk (see note 89), Berkuski (Platons

previous critics. still upholds an early date. Zeller, and he has not yet been thoroughly refuted. Though polemic enters to no extent into the plan of the present investigation, it seems to be in this special case our duty to consider Zeller's arguments, and to prove that they are insufficient to establish his claim.

Allusion to an encampment near Corinth.

1. The first chronological indication is seen by Zeller in the allusion to an encampment near Corinth (Theaet. He refers it to the war which is known in 142 a). history as the Corinthian war and lasted about seven Even if we admit this reference as vears 394-387. possible-instead of accepting the very convincing arguments of Ueberweg, Teichmüller, Bergk, and Rohde, according to which the allusion refers to a battle of 368 B.C. mentioned by Xenophon (Hellen. vii, 1, 15) and other historians-Zeller's inference as to the identity of the tion of the date of composition and the presumed date of the conversation is not cogent. The more striking the campaign the more probable becomes a later allusion to it. All that is really proved is that the date of composition is subsequent to 392; there is no reason to identify both dates, as has frequently been done in the case of the Phaedo and Phaedrus. The association of ideas between Corinthian war and 'encampment near Corinth' is more immediate for us than for the first readers of Plato. But we see in the dialogue the mention of an encampment not of a battle. A soldier might have been wounded in some insignificant attack on his encampment, without having taken part in

Assumpidentity of the date of composition with the supposed date of the introductory dialogue

> Theätetos und dessen Stellung in der Reihe seiner Dialoge, Inaugural-dissertation, Jena 1878), H. Schmidt (Exegetischer Commentar zu Platos Theätet, Leipzig 1880), H. Jackson, E. Rohde, W. Christ ('Platonische Studien,' in vol. xvii. of Abhandlungen der philosophisch-philologischen Classe der königlich bayerischen Akademie der Wissenschaften), Teichmüller, Siebeck, Archer Hind (Introduction to the Timaeus, p. 21), M. Jezienicki (Ueber die Abfassungsseit der platonischen Dialoge Theaitet und Sophistes, Lemberg 1887). Zeller did not consider all the above authors and their arguments when he declared repeatedly the discussion as definitively settled (Archiv für Geschichte der Philosophie, vol. iv. p. 189, vol. v. p. 289, vol. viii. p. 124, and on many other occasions).

> an historical battle. If we take the mere fact of an en-

campment in which dysentery is reigning, we have no reason whatever to refer it to 392 rather than to 368 unless some independent testimony is forthcoming about an epidemic of dysentery occurring at one of these dates alone. In both cases a fight near Corinth took place. It has been argued that Theaetetus, who was a boy according to the dialogue at the time of Socrates' death, could not already be famous seven years later. Here, as in the Compari-Phaedrus, we have a prophecy put in the mouth of son Socrates realised at the time of writing. If in the with the Phaedrus the prophecy refers to the Panegyricus written 26 years later, the prophecy about Theaetetus might well have been realised in a length of time almost equal. Zeller believes that the mention must refer to a recent fact. Anybody Notion of The notion of recent facts is often abused. might speak to-day of the Russo-Turkish war as recent a recent if compared with the conquest of Constantinople by the fact. There is no reason to believe that for Plato Turks. current events ceased to be recent sooner than for us. at a time when he spoke of twenty-five generations as a ridiculously small period.

Phaedrus prophecy.

2. If historians are right in saying that Iphicrates in this very Corinthian war introduced the peculiar force of light-armed infantry known as πελτασταί, the allusion to them on the part of Socrates (165 D) certainly involves an anachronism. But if the use of peltasts began at that Theretime, there is no reason to think that it ceased twenty tetus wit years later. It would be more reasonable to argue from Protaa similar mention of peltasts in the Protagoras (350 A) that the Protagoras cannot have been written earlier than 393; and any one who compares the Protagoras with the Theaetetus will find such differences of style, of method, of literary perfection, and of philosophical theory, that it is impossible to ascribe both to the same period. But the truth is that, whatever may have been the device of Iphicrates, the word πελταστής occurs in several earlier writers, Euripides, Thucydides, Lysias, Xenophon, and

Mention of the Peltasts common to the goras and Laws.

is common to the Laws with Theaetetus and Protagoras, so that it has no chronological value whatever in Plato. To infer anything from it means almost as much as to refer any work in which a mention of potatoes occurs to the next time after the first introduction of this vegetable in Europe in 1584 A.D. It seems astonishing that Zeller should have followed Teichmüller in such inferences from an accidental mention of an object familiar to Greek readers before Plato began to write.

Twenty-five ancestors. Genealogy less interesting for Plato than for some modern historians of philosophy.

3. A third indication of the date of the Theaetetus is seen by Zeller in the allusion (175 A) to those who are proud of twenty-five ancestors, and of their descent from Heracles son of Amphitryon. This allusion has also been treated as a mark of date by Bergk and Rohde, but each assumes a different descendant of Heracles. And even if we take Plato to be referring to a contemporary, who is to decide whether among the twenty-five ancestors Amphitryon's father Alcaeus or his grandfather Perseus are to be counted or not? In any case Heracles need not be the twenty-fifth. The discussion whether Agesipolis (Zeller), Euagoras (Rohde), Dionysius of Syracuse (Teichmüller), Agesilaos (Bergk) or anybody else is meant by Plato is a curious example of the abuse of erudition leading to misunderstanding of the text on which the erudition is spent. Plato speaks of twenty-five generations as he does of ten thousand plethra of land, probably without any intentional allusion to any one in particular. The pride of counting Heracles among one's ancestors, and even a catalogue of twenty-five or more of them. cannot have been uncommon in Plato's time, if after so many centuries four historians are able to quote four different descendants of Heracles with twenty-five or more ancestors a-piece (175 A: σεμνυνομένων καὶ ἀναφερόντων is a plural that might be taken literally). But it is by no means certain that Plato was as skilled in genealogy as his modern interpreters. He regards the whole question as contemptible, a monstrously small way of reckoning

(σμικρολογία). Those acute critics who perceive in each round number quoted a statistical datum incur the danger of being accused of a σμικρολογία more blameworthy than that complained of by Plato.

- 4. A fourth argument of Zeller is more serious than The the preceding. He says that the critical character of the incon-Theaetetus does not agree with the positive constructive exposition of the Republic. Zeller means that such elementary inquiry into the foundations of knowledge was most probable in a time when Plato began the building of his philosophy. We quite agree with Zeller, but or second if we add that Plato in his exceptionally long and active beginning. life had time to build more than one philosophy, we are at liberty to place the Theaetetus at the opening of Plato's second voyage for the discovery of truth, after the Republic. In two passages we notice allusions which may with some Allusions probability be referred to Republic (177 Ε: παραδευγμάτων to έν τῷ ὄντι ἐστώτων, τοῦ μὲν θείου εὐδαιμονεστάτου, τοῦ δὲ Republic άθέου άθλιωτάτου, οὐχ ὁρώντες ὅτι οὕτως ἔχει, ὑπὸ ἡλιθιότητός τε καὶ ἐσγάτης ἀνοίας λαμθάνουσι . . . 175 C: σκέψιν αὐτῆς δικαιοσύνης τε καὶ ἀδικίας . . . βασιλείας πέρι καὶ άνθρωπίνης όλως εὐδαιμονίας καὶ άθλιότητος . . . ποίω τέ τινε έστον καὶ τίνα τρόπον ἀνθρώπου φύσει προσήκει το μέν κτήσασθαι αὐτοῖν, τὸ δὲ ἀποφυνεῖν), and to the Phaedrus (175 Ε: άρμονίαν λόγων λαβόντος όρθως ύμνησαι θεών τε καὶ ἀνθρώπων εὐδαιμόνων βίον)—while Zeller could not find in the whole Republic an equally probable allusion to the Theaetetus. If we compare the critical tendency of the Theaetetus with the critical and elementary character of the works belonging to the Socratic stage, we shall easily notice the difference between those youthful personal criticisms and the fundamental criticisms of the Theaetetus similar to those of the Parmenides and Sophist.
 - 5. Zeller finds an argument for the early date of the Zeller's Theaetetus in his belief that the Politicus is earlier than view of Symposium and Phaedo. But he has not furnished any early proof of this assumption, which contradicts everything we

clusive indicates new departure.

Phaedrus.

know about the development of Plato's style and his logical doctrines.

- 6. The relations between Plato, Antisthenes, and Euclides, which Zeller also invokes in favour of an early date of the *Theaetetus*, are too little known for any chronological inferences, and they could never prove anything about the date of composition, because Antisthenes is not named in the dialogue, and Euclides appears at the beginning without any mention which would allow inferences about his relations to Plato.
- Zeller's view that a late date for the Theae-tetus leaves no room for the dialogues which follow it.

 Which are these?

7. Zeller enumerates the dialogues which in his opinion followed the Theaetetus, and finds it improbable that they could have been written in the last twenty years of Plato's life. But he includes the Republic in this enumeration, on the ground that he holds the Republic to be later than the Philebus, and the Philebus than Parmenides and Theaetetus. We quite agree that the Parmenides and Philebus follow the Theaetetus, but we see no sufficient reason for placing the Republic after the Philebus. Zeller relies on some parallel passages which are too general to prove anything, and even rather confirm the priority of the Republic.249 Such parallels are rarely decisive, and have only then a certain value, if many concomitant variations point in the same direction. dialogues which, according to our exposition, precede the Theaetetus (Euthydemus, Gorgias, Cratylus, Symposium, Phaedo, Republic, Phaedrus) are in their total size (453 pp. ed. Did.) almost equal to the seven dialogues which we suppose to be later than the Theaetetus (Parmenides, Sophist, Politicus, Philebus, Timaeus, Critias, Laws, 457 pp. ed. Did.). If we are right in supposing that the seven earlier dialogues were written in the years 390-379, there is no difficulty whatever in admitting that the seven later works fall within the last twenty years of

Relation of size between dialogues earlier and later than the Theae-tetus.

²⁴⁰ This question has been recently dealt with by Jackson ('Plato's later theory of ideas VII. The supposed priority of the *Philebus* to the *Republic*,' in the *Journal of Philology* for 1697, N. 49, pp. 65–82).

Plato's life (367-347), or even within the time after his third voyage to Sicily (361 B.C.). If this were proved, then the mention of the superiority of oral teaching at the end of the Phaedrus would mean nothing less than Probable an interruption of about twelve years in Plato's literary labours. But of course such a conclusion requires more serious arguments than those on which Zeller founded his conviction about a very early date of the dialectical works. Here it is only put forth as a possibility which may be made probable by further investigations.

interruption in Plato's literary activity.

not convincing.

At all events, the above reasoning shows that Zeller's Zeller's arguments prove only that the Theaetetus is later than argumen-392 B.C., without any determination of the distance between this terminus a quo and the date of composition. All the allusions found out by Zeller with such acuteness and erudition, even if we admit the interpretation he gives them, would remain quite as natural twenty-five years after the Corinthian war as immediately afterwards. In such things we have not the right to look at Plato from the point of view of a newspaper editor, who wishes to give to his readers the most recent information. was free to choose from his large stores of experience at any time any example proper for an illustration of his views, without considering whether it occurred long ago or yesterday. No such immediate allusion as the διοικισμός of the Symposium has been found as yet in the Theaetetus. On the contrary we have several reasons to believe that the Theaetetus is a late dialogue, written by Plato after fifty and possibly after sixty. These reasons have been late date collected since Munk and Ueberweg by many investigators and can easily be supplemented by considerations Theaeof style and logical comparisons.

Prevailing reasons of the tetus.

We find in the Theaetetus clear allusions to Plato's Allusions school. The person of the younger Socrates, introduced to Plato's here, is also known from the Metaphysics of Aristotle school. (1036 b 25), where he is quoted in the manner in which Aristotle quotes oral reminiscences. This led Ueberweg to

392

The vounger Socrates and Aristotle. the conclusion that this younger Socrates belonged to the Academy at the same time with Aristotle, or after 367 B.C. If we consider that he does not take an active part in the conversation, it becomes probable that Plato introduced him as a witness out of some personal sympathy at the time when he already had known him for some time past. This argument is not decisive, because the younger Socrates may have belonged to the Academy a long time before Aristotle and still have continued in it afterwards. The Academy was not similar to our universities as to the limits of time fixed for the studies, and Plato's pupils probably remained in touch with him for life.

Allusions to travels.

But a more important observation has been made by Ueberweg as to the picture drawn of the philosopher, that it can best be explained if we refer it to Plato's experience in Syracuse, where he may have found many parasites ready for all kinds of slavish services to please the tyrant. It may also be argued that the insistence with which Theodorus of Cyrene is asked to take an active part in the discussion is most natural after Plato's visit to Cyrene.

Theodorus of Cyrene.

Teichmüller's argument from the dramatic form.

How far defensible.

Such allusions to external events are always open to doubts, and are here quoted without attaching to them any special importance. There is another chronological indication of a more serious character, noticed already by Schleiermacher and brought forward afresh with strong conviction by Teichmüller. This is the statement at the beginning of the dialogue that it has been written down in the dramatic form to avoid frequent repetitions of such formulas as καὶ ἐγὼ ἔφην, καὶ ἐγὼ εἶπον, συνέφη, οὐγ ὡμολόγει (143 c). Teichmüller infers from this passage that Plato began only with the Theaetetus to write his dialogues in a dramatic form. But the dramatic form is the primitive form for a dialogue, and needs no apology. The narrated form of a philosophical dialogue is a much more complicated mode, and was perhaps introduced into Greek literature by Plato. After trying its different variations, he returns to the dramatic form and apologises for the change. In point of fact the narrated form has been tried by Plato only in a few of his works, and almost in every case with some difference, as the following classification of the form of Plato's dialogues shows:

- 1. A continuous speech, including questions and answers. This is the character of the *Apology*, in which some passages refer to conversations held by the speaker (20 A), and others introduce an imagined conversation with the accuser (24 D E, 27 B C, &c.).
- 2. Dramatic dialogues in which Socrates acts as leader of a conversation. This is the most numerous class, including Euthyphro, Crito, Laches, Io, Meno, Gorgias, Cratylus, Philebus—and among the doubtful dialogues Alcibiades I. II., Hipparchus, Theages, Hippias maior and minor. A slight variation appears when the dramatic conversation includes long speeches of Socrates or others: Menezenus, Phaedrus.
- 3. In a narration in which Socrates gives an account of some earlier conversation, the chief part is a narrated dialogue. This is the form of the *Republic*, and besides only of *Lysis* and *Charmides* (among the spurious dialogues: *Erastae*). In this form the repetition of the formulas complained of at the beginning of the *Theaetetus* is most conspicuous.
- 4. After a dramatic introduction, in which Socrates appears as one of the persons of the dialogue, he begins to narrate an earlier conversation, and this narration follows up to the end. This form is found only in the *Protagoras*.
- 5. Different from the above is a narration interrupted by dramatic portions in which other persons speak with Socrates about his narration, and such a conversation forms the conclusion of the whole. This occurs only in the *Euthydemus*.
- 6. After a dramatic introduction another person than Socrates narrates a dialogue in which Socrates played the chief part. This is limited to the Symposium.
- 7. The above form is improved by dramatic interruptions in which some opinions are expressed by the hearer about the narrated dialogue. This occurs only in the *Phaedo*.
- 8. After a dramatic introduction follows a reading of a dramatic dialogue, excused by a censure of the narrated dialogues generally. This is the case of the *Theactetus* alone.
- 9. After a short narration designed to explain the circumstances of a conversation, follows the dialectical conversation without the interruptions complained of in the *Theaetetus*. This distinguishes the *Parmenides* from all other narrated dialogues, and makes it possible that this work was written after the *Theaetetus*, though in

Twelve different modes of dialogue in Plato. its general form it is a narrated dialogue, and even a narration of a narration, the dialogue being represented as first narrated by Pythodoros, then from him learned by Antiphon, and from Antiphon's narration repeated by the actual narrator. But formulas peculiar to the narrated form occur only on pp. 126 A-137 c, here being also often omitted, while they are altogether missed on pp. 187-166. Those occurring in the introduction are different from those condemned in the *Theaetetus* and from the use of other works: ἔφη φάναι, εἰπεῖν being chiefly used.

- 10. Dramatic conversations in which Socrates proposes a subject, which is then dealt with by another philosopher: Sophist, Politicus.
- 11. After a short dramatic conversation in which Socrates proposes a subject, follows a much longer speech by another person. This long speech may be interrupted by some words of recognition from Socrates (*Timaeus*) or not at all interrupted (*Critias*).
- 12. Dramatic dialogue in which Socrates no longer appears even as hearer: Laws.

It results from the above distinctions 250 that what Teichmüller calls the narrated dialogue includes seven kinds (No. 1, 3, 4, 5, 6, 7, 9), which represent different attempts towards a more perfect form. Only the Lysis, Charmides, and Republic take the form of a continuous The nearest mode to this is a narration with narration. dramatic introduction, as in the Protagoras. From the Protagoras the Euthydemus differs by dramatic interruptions and conclusion, the Symposium by the absence of Socrates in the Introduction, the Phaedo in addition to this by its dramatic interruptions. At last, in the second part of the Parmenides narration is abandoned altogether without any explanation, and the whole dialectical discussion follows dramatically.

Teichmüller's inference, if limited to the supposition that Plato did not return after the *Theaetetus* to the form criticised in this dialogue, appears very probable, and

²⁰⁰ An attempt at such a classification has already been made by Stein (Sieben Bücher sur Geschichte des Platonismus, Göttingen 1864), who divided all the works of Plato into five classes, in a somewhat different manner from the above. It is noteworthy that all the spurious dialogues have the form 2 or 3, while the ten other kinds of dialogues used by Plato have not been imitated.

Pure narration least common of all, and occurs in three works.

furnishes us with valuable chronological information, giving additional strength to other reasons, according to which the Theaetetus is later than the Phaedo and Republic. It is not contradicted by any well-established It is true, fact, that Plato in his later age used the dramatic form exclusively. All the dialogues known to be the latest are dramatic, and the narrated form of the Republic compared with the dramatic form of the Timaeus, its professed continuation, confirms again the supposition that Plato relinquished the narrated form in order to adopt the form. But it does not follow that he should never have used the dramatic form before he started with narrations, nor even in intervals between narrated dialogues. The small dialogues, as to which there is great probability that they were written early, are dramatic, and it is most natural for anybody who writes philosophical dialogues to begin with this form. Esthetical reasons, and the desire to give a greater poetical plasticity or historical probability to an imagined conversation, led later to the more difficult form of narration, which, after different variations, had to be finally abandoned in the Theaetetus and Parmenides. The inconvenience of parration could nowhere be felt more clearly than in the composition of the Republic, and Theaethus one of the most probable inferences from the explana- tetus after tion given in the Theaetetus is the priority of the Republic. This is further confirmed by a parallel passage in the Republic, where the dramatic form is condemned, after a long explanation of the difference between narration and dramatic representation (Rep. 392 D-396 c) on the ground that the dramatic form is less immediate and sincere than the narrative (396 c: ό μέν μοι δοκεί μέτριος ανήρ, ἐπειδαν αφίκηται ἐν τη διηγήσει επί λέξιν τινά ή πράξιν ανδρός αγαθού, έθελήσειν ώς αὐτὸς ῶν ἐκεῖνος ἀπαγγέλλειν και οὐκ αἰσχυνεῖσθαι επί τη τοιαύτη μιμήσει . . . B : διηγήσει γρήσεται οία ήμεις ολίγον πρότερον διήλθομεν . . . καὶ ἐσται αὐτοῦ ἡ λέξις μετέχουσα μεν αμφοτέρων, μιμήσεώς τε και της άλλης διηγήσεως, σμικρον δέ τι μέρος ἐν πολλῷ λόγφ τῆς μιμήσεως).

however. that all the latest dialogues are dramatic in

Republic.

Possible motive for the preface to Theae-tetus.

This recommendation of narrations is given in a narrated dialogue, and we know that Plato wrote afterwards dramatic dialogues, as, for instance, his Laws, Timaeus, Critias. If now we meet in the Theaetetus an apology for avoiding the form of a narrative when it might be expected, it appears very natural that this apology is later than the condemnation of the dramatic form enunciated in the This conclusion is the more justifiable, as Plato Republic. warns us that his condemnation of the dramatic form is not limited to tragedy and comedy (394 D). The above is only an indication, but seems to be more significant than the inferences drawn from the genealogy of various descendants from Heracles. The formulas objected to in the Theaetetus can occur only in a dialogue narrated by Socrates, and therefore the whole objection, if taken literally, refers solely to Lysis, Charmides, Protagoras, Euthydemus, and Republic. Besides the formulas expressly named other answers are used, and it would be an interesting investigation to find out in which of these five dialogues the expressions rejected in the Theaetetus are most frequent. There can be scarcely any doubt that the greatest number of them is to be found in the Republic.

The priority of the *Republic* to the *Theaetetus* is confirmed also by other allusions and comparisons already mentioned which may be here briefly recapitulated:

Notions familiar in Theae-tetus, but carefully explained in the Bepublic. Relation of both dislogues.

- 1. δύναμις is first explained in Rep. 477 c as a new notion. It is used currently as familiar in the Theaetetus: 158 E, 185 c, &c.
- 2. The eternal models of the happiest and unhappiest life $(176 \, \text{m})$ as well as the mention that the philosopher investigates the nature of justice $(175 \, \text{o})$ are best explained if the reader is supposed to be familiar with the *Republic*.
- 8. The short and matter-of-fact enumeration of mathematics, music, astronomy, geometry, and stereometry (145 A c, 148 B), as preparatory to philosophical problems, seems also to be a reminiscence of the *Republic*.
- 4. The poets are placed on the same footing with Protagoras in their error of denying permanent substance (152 E). This is best explainable after the *Republic*, as in the *Symposium* and even in the *Phaedo* (95 A) Homer was praised without irony.

- 5. The notion of movement as distinguished into change of quality and change of place, common to the Theaetetus with Parmenides and Laws, could not easily be ignored in Republic and Phaedrus if already familiar to Plato.
- 6. The idea of innumerable periods of ten thousand generations (Theaet. 175 A, cf. Legg. 676 B C, 677 D: μυριάκις μύρια έτη) implies an advance beyond the Republic and Phaedrus, where large periods of generations first appeared, and were specially justified. The long duration of life on the earth is here assumed as known to every educated man, and this was first explained in the Republic.
- 7. The logical standpoint goes very much beyond the theory of ideas as known from the Republic and Phaedrus. This results from our whole exposition.

Some of the above points apply equally to the priority of the Phaedrus, and there is besides one special point of comparison which places the Phaedrus before the Theaetetus, namely the calm recognition of rhetoric (201 A), which seems to imply what has been said on this subject in the Phaedrus. But the strongest reason why the Priority of Theaetetus must be looked upon as later than the Phaedrus Phaedrus lies in the affinities of both dialogues to different groups of other dialogues. The Theaetetus is in style and contents nearest to the Sophist and Politicus, which are proved to be very late. The Phaedrus shows Affinity of in style and contents the greatest affinity with the Phaedrus Republic, which is proved to be earlier than the Sophist. The poetical imagination displayed in the Phaedrus and Republic is radically different from the dialectical imagination of the Theaetetus and Sophist. The retirement of the philosopher from the world, which we see in the to the Theaetetus, remains throughout all later dialogues, and Sophist. also the complaint that life on earth is too imperfect for the realisation of a philosopher's dreams. This complaint, quite opposed to the optimism of the Republic and Phaedrus, betrays an interval not only of time but also of bitter experience between the poetical and the dialectical group.

We know in Plato's life, after the foundation of the Theas-Academy, only one great disenchantment which could tetus

to Theaetetus.

to the Republic, and of Theaetetus

The

probably subsequent to the second voyage to Sicily.

This agrees with other arguments.

justify that change of attitude on the part of the great thinker. This was his second voyage to Sicily in 367 B.C. which he undertook in the hope of realising his ideal schemes, and which ended unsuccessfully. It appears most probable that the new departure, beginning with the Theaetetus, coincides with his return from this voyage. This cannot be proved, but may be suggested as a plausible hypothesis, well adapted to explain many things otherwise unexplained. Those who believe that the battle near Corinth, mentioned at the beginning of the dialogue, must have been quite recent when Plato wrote the Theaetetus are then at liberty to accept Ueberweg's supposition that a battle in 368 B.C. is meant here, and they can seek additional evidence in inscriptions and literary monuments in order to prove that dysentery was reigning then in the encampment. The lovers of genealogies will have a greater choice to select from, and may find in some contemporary encomium, as Dümmler expects, a clear statement about twenty-five ancestors descending from Heracles, thus removing the improbable supposition that Plato himself counted somebody's ancestors.

Probable interval between Phaedrus and Theaetrus.

This would explain peculiar style of the Theastetus.

These are trifling advantages, compared with other con-If, as we suppose, the Phaedrus was written siderations. about 379 B.C., and the Theaetetus after 367, then the passage at the end of the Phaedrus, in which oral teaching is extolled over writing, would obtain a new and original interpretation: it was a farewell to literary activity for about twelve years. And also one strange peculiarity of the style of the Theaetetus is psychologically explained. The Theaetetus, having according to our calculations a slightly later style than the Phaedrus, is distinguished by the entire absence of very important or very frequent stylistic peculiarities. This is natural if that dialogue is written after a long interruption of literary activity. Plato was then to a certain extent free from acquired habits, and he did not at once fall into new idioms which might become very familiar in later works.

He used freely the richness of his old vocabulary and style, recurring less than usual to new formations and new idioms. Out of 500 peculiarities observed only four accidental words or locutions (11: μεμπτός, 208: ἐντεῦθεν ήδη, 399 : π ερὶ δή with genitive, 467 : γυμνασία) are new, being missed in earlier works. All other peculiarities of Absence later style occurring in the Theaetetus (58 accidental, of very 41 repeated, 31 important) have been also found in important dialogues which we have placed earlier. While the pecunumber of accidental, repeated, and important peculiarities is much greater than in the Phaedrus (130 against 112) there is not one very important peculiarity in the Theaetetus though seven are found in the Phaedrus. But none of these seven is missed in the Theaetetus, only their frequency is smaller, so that they are counted only as important or repeated in the Theaetetus, while they are more important in the Phaedrus (23, 231, 376, 377, 390, 412, 451).

liarities.

The difference between both dialogues is just what might be expected if we place the Phaedrus at the end of a period of extraordinarily intense literary activity, and the Theaetetus at the beginning of another period, after a long interruption. Nor is the time of twenty years from Amount 367-347 B.C. too short for the composition of the Theae- of text tetus and the seven dialogues which are left, as their total size is inferior to the total size of the nine dialogues preceding the Theaetetus (Protagoras—Phaedrus) written according to our view between 393-379 B.C. or in about fourteen years. Whether a writer like Plato writes more at forty than after sixty is a question that cannot be decided on general grounds, and we make a due allowance for the diminution of activity in old age, down to an average of only four lines (ed. Didot) every day if the last eight dialogues (Theaetetus-Laws) were written in about nineteen years.

written after the Theaetetus inferior to the preceding nine dialogues.

What is here proposed as a plausible hypothesis is The susceptible of proof by further investigation of style. At interval between Phaedrus and Theae-tetus might be confirmed by further research.

The

later

Theaetetus is

certainly

than the

Republic,

Phaedrus.

and Symposium.

present the stylistic difference between Phaedrus and Theaetetus is only just sufficient to confirm the later date of the second. But if we remember that thirty years ago the style of the Theaetetus so far as it could then be ascertained appeared as early as that of the Protagoras, and that Campbell resisted the temptation to trust that appearance and judged the Theaetetus to be later than the Phaedrus, which has been fully confirmed by later research—then we are entitled to hope that also our present supposition, that the Theaetetus is about twelve years later than the Phaedrus, may be confirmed by further research. It may also be contradicted, but one thing results as certain from the whole above investigation: the Theaetetus is certainly later than the Republic, Phaedrus, Phaedo, and Symposium. 251 This relation will be still better confirmed if we study the next dialogue, the Parmenides, which in many respects shows a greater affinity with the Theaetetus than its acknowledged continuation, the Sophist.

II. The Parmenides.

(Relative affinity with the latest group, measured on the Laws as unity, = 0.34; see above, p. 177.)

Authenticity doubted but without cause. Among the greater works of Plato none has raised so many suspicions as to its authenticity as the *Parmenides*, since Socher (1820) had the courage to confess that he felt unable to share the traditional admiration for the antinomies forming its second part. Many doubts expressed by Ueberweg and Schaarschmidt have been removed by the subsequent studies on Plato's style. This dialogue presents such numerous Platonic peculiarities, despite its abstract contents, as never occur in spurious

²⁵¹ The relation between *Theaet*. and *Symp*. can also be judged from a comparison of what in both dialogues is said about intellectual pregnancy, which is first introduced in the *Symposium* (206 B), and here supplemented by the notion of intellectual midwifery (*Theaet*. 148 B-149 B).

works. Whatever may be thought of the philosophical Grounds value of antinomies, we find them here presented with great skill, and the conclusions are not more puzzling than those found in a similar treatment of philosophical problems by modern thinkers. The great originality of form and contents can raise suspicion only in critics who removed are unaware of Plato's originality in other works. Parmenides is not like other dialogues, but the Phaedrus sequent and the Timaeus also differ widely from the Phaedo and research. Symposium.

urged by Ueberweg Schaarschmidt The by sub-

It has been thought that Plato could not have invented such objections to his own theory as those with which he credits Parmenides in this dialogue. Thus Teichmüller and Siebeck 252 have been led to the supposition that Plato wrote the Parmenides against Aristotle, and that the second part is intended to refute the objections raised in the first part against the theory of ideas. Even if we admit that the Aristoteles of the dialogue is The introduced here with reference to the philosopher Aristotle, Parmethere are serious difficulties in the way of crediting him nides not with the objections expressed by Parmenides. Aristotle came to the Academy in 367 B.C. at the age of seventeen, Arisand in view of the extent of the six dialogues which are totle. later the Parmenides cannot have been written long after this. We have seen in the Theaetetus how Plato proceeds when he seriously wishes to refute an objection, and according to this standard we cannot accept the second part of the Parmenides as a refutation of objections raised in the first part. It leads, like the Theaetetus, beyond the primitive theory of ideas to a system of categories, among which unity and variety are discussed by a peculiar method, and shown to supplement each

are used with absolute generality.

explain existence altogether, and that therefore we have to seek everywhere the one and the many, as is done The terms in the subsequent dialectical dialogues. It has been asked whether the one means the Platonic idea, or God. or anything else. This question is out of place here. The whole discussion is kept in the most general terms, and may apply to many particular cases. We notice the same tendency as in the Theaetetus to substitute abstract notions for the primitive conception of the ideas, and we need not deprive Plato of the merit of having discovered his objections for himself, the more so as these objections do not necessarily refer to his own earlier views, but to certain special determinations of these views, which may be ascribed to his pupils.

Plato himself discovered the objections: whether to his own theory, or that of some follower.

In no earlier dialogue had the different conceptions of the relation between ideas and the particulars been stated with such clearness. It remains uncertain whether these different conceptions are Plato's own, because his theory of ideas so far as it was expressed in earlier dialogues admitted different interpretations. It might be supposed that these interpretations had been attempted by some of his pupils and that he wrote the Parmenides with the purpose of showing the difficulty of such very concrete and special interpretations. The chief point which had been always insisted upon with sufficient clearness, the essential difference between idea and particulars, remains untouched by all objections, and for the first time we find it clearly stated that an idea may vary according to the conception of the conceiving mind.

The Τρίτος Ενθρωπος argument.

The chief objection, known as the 'third man,' consists in the representation of an infinite number of identical ideas (132 A: αὐτὸ τὸ μέγα καὶ τάλλα τὰ μεγάλα. έὰν ώσαύτως τῆ ψυχῆ ἐπὶ πάντα ἴδης . . . ἔν τι αὖ που μέγα φανείται, φ ταθτα πάντα ανάγκη μεγάλα φαίνεσθαι. άλλο άρα είδος μεγέθους αναφανήσεται, παρ' αὐτό τε τὸ μέγεθος γεγουός και τα μετέχουτα αὐτοῦ και ἐπὶ τούτοις αὖ πασιν έτερον, ο ταύτα πάντα μεγάλα έσται και οὐκέτι δή εν

ἕκαστόν σοι τῶν εἰδῶν ἔσται, ἀλλ' ἄπειρα τὸ πλήθος). This objection is by no means peculiar to the Parmenides. Not It had occurred in the Theaetetus (200 B: ἡ πάλιν αὖ μοι peculiar έρείτε ὅτι τῶν ἐπιστημῶν καὶ ἀνεπιστημοσυνῶν εἰσὶν αὖ έπιστημαι . . . καὶ οὕτω δὴ ἀναγκασθήσεσθε εἰς ταὐτὸν περιτρέγειν μυριάκις οὐδὲν πλέον ποιοῦντες) applied to knowledge, and in the Republic (597 BC) to the idea of There Plato indicated the logical necessity of stopping in this infinite progress. A certain analogy to this is found also in the Timaeus (31 A) where the question is raised, whether besides our world there is not an infinity of worlds containing it, and this is denied.

to the Parmenides.

This argument has been attributed to Polyxenos whom Plato met in Syracuse, and is here for the first time answered by the supposition that each idea might be a thought and Ideas as exist only in our soul (132 B: μη των είδων έκαστον η τού- notions. των νόημα, καὶ οὐδαμοῦ αὐτῷ προσήκη ἐγγίγνεσθαι ἄλλοθι ἡ in the explanation is not contradicted by what follows. Parmenides says that if each idea is thought of as unity (132 c: είδος έσται τοῦτο τὸ νοούμενον εν είναι, ἀεὶ ον τὸ αὐτὸ ἐπὶ πᾶσιν) the primitive theory of μέθεξις could not be maintained (132 c: εἰ τἆλλα φὴς τῶν εἰδῶν μετέχειν . . . οὐκ ἔγει λόγον). Then Socrates proposes, not as a different solution, but only as an additional explanation, a view of the ideas as models of natural kinds, to which the Ideas as particulars are similar (132 D: τὰ μὲν εἴδη ταῦτα ὥσπερ models. παραδείγματα έστάναι εν τῆ φύσει, τὰ δὲ ἄλλα τούτοις ἐοικέναι καὶ είναι όμοιώματα καὶ ή μέθεξις αῦτη τοῖς ἄλλοις γίγνεσθαι των είδων οὐκ ἄλλη τις ἡ εἰκασθήναι αὐτοῖς). This view is consistent with the psychological character of ideas as notions, and the further objections refer to είδη αὐτὰ καθ' αὐτὰ (133 A), not to general notions.

The one and the many, to which the antinomies of the second part refer, are also notions, not ideas existing outside All the human mind. This is perfectly consistent with what has been said in the Theaetetus about the activity of the soul. It is one of the aspects of later Platonism: the soul as the

centres in the soul.

ἐμπεσών διαφθαρώ).

source of movement acquires an increasing importance

and considers its own notions as objects of knowledge. In the Parmenides the link is given which makes it possible to use the terminology of ideas for general kinds or notions. One of the objections of Parmenides against the universal application of transcendental ideas is at once admitted by Socrates and gives the explanation of the subsequent discussion. The idea in its former shape had to be perfect, and at that earlier stage Plato cared only for the knowledge of what could attain perfection. his desire of knowledge extends to everything existing. and there are things imperfect by their very nature (130 c: θρίξ καὶ πηλὸς καὶ ρύπος ἡ ἄλλο ὅ τι ἀτιμότατόν τε καὶ φαυλότατου) of which we conceive notions, but not transcendental ideas, under the penalty of falling into an abyss of absurdity (130 D: δείσας μή ποτε είς τιν' ἄβυθον φλυαρίαν

Rising from particulars to more general kinds,

of knowledge to imperfect things.

Extension

human notions are susceptible of improvement up to the ideal standard of the divinity. Thus perfect ideas appear to be out of the reach of human reason (135 A: πολλή ἀνάγκη αὐτὰ είναι τῆ ἀνθρωπίνη φύσει ἄγνωστα). Relativity If anybody denies their existence, it is difficult to prove and fixity. his error: it requires an exceptional intelligence to show that each thing has its own substance (135 A B: ἀνδρὸς πάνυ μεν ευφυούς του δυνησομένου μαθείν ώς έστι γένος τι έκάστου καὶ οὐσία αὐτὴ καθ' αὐτήν, ἔτι δὲ θαυμαστοτέρου τοῦ εύρήσοντος καὶ ἄλλον δυνησομένου διδάξαι ταῦτα πάντα iκανώς διευκρινησάμενου). What Parmenides says, that without fixed ideas neither dialectic nor philosophy is possible, refers to the general kinds of Being as they have been presented in the Theaetetus, and does not necessarily imply their separate existence. He then recommends dialectical exercise as the best way of advancing knowledge, and proceeds to give a sample of such an exercise. which is here called a laborious pastime (137 B: πραγ-

ματειώδη παιδιάν παίζειν), convenient only in a limited

Dialectical exercise after a

circle of friends and pupils (137 A: αὐτοί ἐσμεν), not new before a larger public (136 D: ἀπρεπή γάρ τὰ τοιαῦτα model. πολλών ἐναντίον λέγειν ἀγνοοῦσι γὰρ οἱ πολλοὶ ὅτι ἄνευ ταύτης της δια πάντων διεξόδου τε καὶ πλάνης άδύνατον έντυγόντα τῷ ἀληθεῖ νοῦν ἔγειν).

The method is supplementary to the method which had been proposed in the Phaedo. There it was the philosopher's aim to explain each hypothesis by another up to the highest hypothesis which might be confidently accepted. Here Parmenides wants us to follow out the consequences Disjuncof each hypothesis affirmed or denied, and its relation to the tive inwhole of our knowledge (136 B: ἐνὶ λόγφ, περὶ ὅτου ἄν ἀεὶ ference. ύποθη ώς όντος και ώς οὐκ όντος και ότιοῦν ἄλλο πάθος πάσγουτος, δεί σκοπείν τὰ ξυμβαίνοντα πρὸς αύτὸ καὶ πρὸς ἐν ἔκαστον των άλλων, ὅ τι ἀν προέλη, καὶ πρὸς πλείω καὶ πρὸς ξύμπαντα ώσαύτως · καὶ τάλλα αὖ πρὸς αῦτά τε καὶ πρὸς ἄλλο ο τι αν προαιρή αεί, εάν τε ώς ον ύποθή ο ύπετίθεσο, έάν τε ώς μη όν, εί μέλλεις τελέως γυμνασάμενος κυρίως διόψεσθαι τὸ ἀληθές). This method implies the recog- Mutual nition of a mutual relation and interdependence of relation all things that exist, and we need not expect in the of all following large sample of antinomies about the one and existing the many a full realisation of the proposed problem.

The idea of relation occupied Plato's mind with increasing fascination, as is shown not only in the antinomies of the Parmenides, but also in the surprising conception according to which our notions are in the first instance Remoterelated only among themselves, and could be out of relation ness of with more perfect notions or ideas of the Divinity. example chosen to illustrate this relativity is the relation between a slave and his master. This relation is a relation of two men, says Parmenides, and not of the ideas of slavery and mastership (133 E). Although this view is here introduced as an objection to transcendental ideas generally, it agrees very well with the tendency of the dialectical dialogues which follow, in which we shall find frequently a complaint about the relativity of human

things.

The the perfect idea. Platonic and Kantian antinomies.

knowledge. The distinction between a subjective notion and its objective counterpart is nowhere so clearly stated as here; this is not the only feature in which the Parmenides approaches Kant's Kritik. Also the discovery that abstract notions, if applied without restriction, lead to antinomies of reason, is common to Plato and Kant, although they have treated the subject differently. These antinomies are the further consequence of the dualistic tendency already visible in the Theaetetus and increasing in the Laws, where even the unity of soul throughout the universe is denied, since evil cannot be ascribed to God.

Know-

ledge more clearly conceived.

Universality of the philosopher and his high training.

On the other side we find here a partial answer to the question 'what is knowledge?' which was raised in the Theaetetus and left unanswered. Knowledge is a system of notions from the highest down to the lowest, brought into manifold mutual relations. Only uneducated people look upon logical exercise as idle talk (135 D). Such exercise leads us from the visible world to the ideas which are an object of reason (135 E: ἀνάσθην, ὅτι οὐκ εἴας ἐν τοῖς όρωμένοις οὐδὲ περὶ ταῦτα τὴν πλάνην ἐπισκοπεῖν, ἀλλὰ περὶ ἐκείνα & μάλιστά τις ἃν λόγφ λάβοι καὶ εἴδη ἃν ἡγήσαιτο sîvai). The true philosopher neglects nothing, however insignificant it may appear, if it has a bearing upon his general theories, and is not influenced by the unscientific opinions of the many (130 E: νέος γὰρ εἶ ἔτι, καὶ οὖπω σου αντείληπται φιλοσοφία, ώς έτι αντιλή ψεται κατ' έμην δόξαν, ότε οὐδὲν αὐτῶν ἀτιμάσεις · νῦν δὲ ἔτι πρὸς ἀνθρώπων ἀποβλέπεις δόξας διὰ τὴν ἡλικίαν). This attitude is preserved also in the Sophist and Politicus, in which the dialectical pastime is continued.

We have seen in the preceding works the theory that the highest standard of knowledge is attainable only through the highest intellectual training. training proposed in the Republic was in mathematical, astronomical, and musical studies as preparatory to Dialectic. Dialectic was there only the knowledge of

the highest idea of Good. In the Phaedrus it was defined as the art of analysis and synthesis of concepts, and this programme was probably followed out in many particulars in the oral teaching of Plato. The result Beginning was an essential change of the former views about ideas. The occupation with particulars of nature brought the concept of movement into prominence, and movement was in some way brought into the fixed and unalterable world of the ideas as we know them from the Phaedo and Symposium. This movement consisted first in the in heuniversal mutual relations among ideas, and then in the coming. progress of each idea, according to the individual perfection of the thinker. Plato's love of ideal perfection is not on the decrease, and the ideas of the perfect Being or God remain as perfect as they were seen in the space above heaven of the Phaedrus. But they are not out of all of the relation to a living consciousness, and each of those thinker. unities has infinite approximations in the minds of the whole hierarchy of beings, and in the variety of appear-No doubt the philosopher is able to bring his ideas to divine perfection, but only through dialectical exercise. In agreement with the importance acquired by general concepts, we find in the Parmenides some new notions. Besides δύναμις (133 E, 135 C), κίνησις Newterms (138 B), ἀλλοίωσις, φορά (138 C, 162 D E), μη ου (142 A) and and other categories used already before, we meet here notions. for the first time τὸ συμβεβηκός as a logical term (128 c). στέρεσθαι (157 c, 159 E), τὸ ἐξαίφνης (156 D), which are clear as general notions but scarcely fit for representation as transcendental ideas.

of movement among ideas: increased interest Evolution of ideas according to the perfection

If our interpretation of the logical meaning of the Parmenides is right, it becomes exceptionally important to determine the place of this work among Plato's dialogues, as it begins together with the Theaetetus a new philosophy of Plato.

That the Parmenides is not an early dialogue, results Parmefrom many hints. What is here repeatedly said of nides not early: as appears from the way in which youth is regarded. youth (130 E, 135 D, 137 B), that young men are inconsequent, that one must learn while young, and that youth is pleasing and compliant, is only explainable if the author was comparatively speaking an old man when writing. If we consider that the limits of youth were wider with the Greeks than with us, that youth must be already at some distance to be thus treated, and that we find in the Laws and in the other works of Plato's old age similar remarks on youth, we are justified in admitting that Plato must have passed middle life when he wrote the Parmenides.

Another general argument in favour of a late date is

the characterisation of Socrates as a young man, receiv-

ing instruction from Parmenides. There is nothing dis-

paraging for Socrates in this position, as Schaarschmidt

Socrates represented as very young and subordinated to another master.

Plato's

ness of

his own

superi-

ority.

thought. He is here clearly admired by Parmenides and Zeno, and his philosophical aptitude is extolled. In all preceding dialogues we have seen Socrates as the ideal teacher, only in the Symposium subordinated to the ideal Diotima, but even there supposed to be the true author of all that he attributes to her. If now we meet for the first time a Socrates who is truly subordinated to another Master, and if we know that in all remaining works of Plato, except the Philebus, Socrates is only a hearer, it becomes very natural to suppose that the Parmenides was written at a time when the living picture of Plato's Master was fading away in a distant past, under the influence of a consciousness of his own superiority. That

The conception of ideas as patterns has been anticipated:

It has been thought that the view of paradeigmatic ideas or eternal models (132 D: παραδείγματα ἐν τἢ φύσει, cf. Theaet. 176 E) appears here for the first time, but this cannot be maintained in view of the fact that we had already in the tenth book of the Republic paradeigmatic ideas, and that such are also implied in the allegory of the

Socrates appears here as a young man, is a consequence of the plan of the dialogue, in which a theory formerly attributed to Socrates had to be corrected and abandoned. Cave. The only view which is really expressed for the ideas as first time is the identification of the ideas with notions in the soul. This view, which we shall see recurring in later works, cannot belong to an early time in Plato's life, at least in connection with a criticism of self-existing ideas.

notions appear for the first time.

The meeting of Parmenides with Socrates, whether historic or not, is mentioned besides this dialogue also in the Theaetetus and Sophist. If we compare 253 both mentions, it is obvious that the Sophist refers to our dialogue, while in the Theaetetus the mention is more general:

Other allusions to the meeting of Socrates with Parmenides.

Theaet. 188 E: τοὺς ἄλλους, οἱ έν έστὸς λέγουσι τὸ πᾶν . . . ἦττον αλσχύνομαι ή ένα όντα Παρμενίδην . . . συμπροσέμιξα γάρ δή τῷ ἀνδρὶ πάνυ νέος πάνυ πρεσβύτη, καί μοι έφάνη βάθος τι έχειν παντάπασι γενναίον. 184 Α: φοβούμαι οὖν μή ούτε τὰ λεγόμενα ξυνιῶμεν, τί τε διανοούμενος είπε πολύ πλέον λειπώμεθα . . .

Soph. 217 C: πότερον είωθας ηδιον αὐτὸς ἐπὶ σαυτοῦ μακρῷ λόγῳ διεξιέναι . . . ή δι' ερωτήσεων, οδόν ποτε καὶ Παρμενίδη χρωμένο καὶ διεξιόντι λόγους παγκάλους παρεγενόμην έγω νέος ών, έκείνου μάλα δή τότε όντος πρεσβύτου; - τῶ μὲν αλύπως τε καὶ εὐηνίως προσδιαλεγομένω ράον ούτω, τὸ πρὸς ἄλλον.

We see that Plato in the Theaetetus mentions in general terms his admiration for Parmenides, and an interview which might be historical without necessarily implying a special reference to the dialogue, while in the Sophist an allusion is made to the short generally affirmative answers which characterise both the Parmenides and Sophist, not the Theaetetus. These three dialogues contain very frequent mentions of Parmenides, who is besides quoted only in the Symposium (178 B, 195 c) on an insignificant matter and without great esteem. In the Theaetetus the examination of the philosophy of Parmenides is declined and adjourned; in the Parmenides the

255 This comparison has been specially insisted upon by P. Natorp in his review of O. Apelt's Beiträge zur Geschichte der Philosophie, Leipzig 1891, in the Philosophische Monatshefte, vol. xxx. pp. 63-70, but in connection with a very early date of the Theaetetus. Natorp's own argumentation gains in strength if the Theaetetus immediately preceded the Parmenides.

Eleaticism for the first time seriously confronted. philosopher is introduced as criticising earlier Platonism and explaining the consequences of his own hypothesis in a manner which might lead the hearer to some doubts; in the Sophist he is criticised by the anonymous guest from Elea, introduced as a friend of Parmenides and Zeno. If these three dialogues, in which the influence of the Eleatic philosophy is first noticed, are written after a sojourn of Plato in Sicily, then it might appear probable that on this voyage he came into closer relations with the Eleatics, just as in the period of middle Platonism the influence of Pythagoras' school is noticeable. So long as we have no more detailed testimonies about these voyages, we must limit our inferences to the observation that Plato at a later stage of his life conceived a special interest in the Eleatic philosophy, either in consequence of personal acquaintance with the representatives of this school abroad, or perhaps under the influence of his own pupils in the Academy, some of whom might have arrived from Italy.

Possible occasions for this.

Categories more differentiated. An important argument for the priority of the *Theaetetus* to the *Parmenides* is the different manner in which the categories and the subdivision of klungs into àllowers and popá appear, being in the earlier dialogue distinctly meant as something new, while in the later both theories are supposed to be known.

Remoteness of the imaginary dialogue. Both the *Theaetetus* and *Parmenides* are distinguished from other dialogues by the introductory information calculated to make on the reader the impression of things of a remote time: in the *Theaetetus* this is done by the fiction of a written account repeatedly corrected; in the *Parmenides* the source appears more distant, as the dialogue has been first narrated by Pythodorus to Antiphon, and by Antiphon to Kephalos, who narrates it to the reader.

Stylistic relation to the Some reason for placing the *Theaetetus* before the *Parmenides* is given by stylistic comparisons. The total stylistic affinity of the *Parmenides* with the latest

group (equivalent to 243 accidental peculiarities) exceeds Theaeonly slightly that of the Theaetetus (equivalent to 233 accidental peculiarities), and this alone would not yet justify a conclusion, were there not a great difference of size between the two dialogues, the Theaetetus being one of the largest (53 pp. ed. Did.), and the Parmenides one of the shorter (31 pp. ed. Did.) dialogues. Under these circumstances the priority of the Theaetetus appears to be very probable, so much more as the Parmenides has a much greater number of peculiarities of later style which are absent from the Theaetetus, than vice versa, as can be seen from the following comparison:

shows that the longer dialogue is earlier...

Peculiarities of later style not occurring in works earlier than the Republic and found:

in Theaet., not in Parm., accidental: 218, 337, 348, 395, 404, 336, 190, 335, 341, 324, 11, 208, 399; repeated: 192, 227; important: 247, 12, 452.

in Parm., not in Theaet., accidental: 486, 487, 488, 189, 216, 224, 331, 485, 470, 492, 483, 490, 478, 323, 476, 25, 28, 225, 322, 458, 459, 461, 462, 464, 466; repeated: 481, 477, 489, 332, 480, 475, 24, 468, 26, 460, 468, 465; important: 479, 318, 27; very important: 14, 15.

This relation of style between Parmenides and Theaetetus was less evident as long as smaller numbers of peculiarities were compared. Thus, according to Campbell's table, the Parmenides appeared to have less affinity with the latest group than nearly all Socratic dialogues, and C. Ritter was led even to doubt the authenticity, because he found fewer peculiarities of later style than he expected in a work which betrayed by some very characteristic marks its late origin. Now we have just enough stylistic evidence to confirm the place assigned to the Parmenides between Theaetetus and Sophist, and further stylistic investigations may very possibly increase such evidence in this case, as they have done in the case of the Theaetetus. Both Parmenides and Theaetetus are stylistically more difficult to class than most

Probability
of an
interval
after
Republic
and
Phaedrus.

other works of Plato. The supposition that both followed after a longer or shorter interval of literary inactivity accounts best for this circumstance. An author who returns to literary labours after an interval does not reach at once a certain fixity of expression and is less likely to introduce many new peculiarities of a permanent character. Thus, however original may be his style in such works, they will contain fewer peculiarities recurring later than the following dialogues, and this produces a diminution of the stylistic affinity with the latest group. The close relation between *Theaetetus* and *Parmenides* as critical dialogues has been illustrated by Campbell through a number of analogies ('On the place of the *Parmenides*,' pp. 6-7, see note 145) which are the more striking as the subject of both dialogues is not identical.

Supposed allusion to Aristotle difficult to verify. The younger Socrates.

There is no definitive indication which could help to fix the date of the Parmenides with exactness, except the supposed allusion to the philosopher Aristotle contained in the mention as a person of the dialogue of another Aristotle, one of the thirty tyrants. This allusion is plausible, and has been brought into relation with Aristotle's criticism of the Platonic ideas. It acquires some additional plausibility if compared with the introduction of the younger Socrates in the Theaetetus. these conjectures require some independent testimonies before they can be accepted as certain. If we accepted them, then the Parmenides would have been written after 367 B.C., and shortly after the Theaetetus. Without rejecting this hypothesis, it remains still possible that both dialogues were composed earlier, but not before the Phaedrus, and not in the next time after the Republic, as the elaboration of the new point of view required a certain length of time. The nearest approach to this new point of view was the recommendation of analysis and synthesis given in the Phaedrus.

The Phaedrus affords a point of transition towards the new dialectic.

Plato's critical philosophy.

To resume the results of the above inquiry on the Theaetetus and Parmenides, we see in these two works the trace of a new logical departure, which does not quite amount to a brusque negation of earlier views, but changes While Plato in the works of his the aims of science. middle lifetime had a conception of truth eternally fixed, which can be perceived by a well-trained mind exactly as it is he became later aware of the subjectivity of knowledge, thetic enof its existence in an ascending scale of souls up to divine deavour. perfection. The ideal was thus further removed from the Ideas present life, while losing nothing in its perfection. aim of science is now not the immediate contemplation of truth eternally pre-existent, but the perfecting of our own ideas so as to form a system built on the mutual correlation of all particulars. The particulars of sensible experience are no longer rejected as useless or perturbing, but they have to be brought into relation with the general stock of knowledge. In the physical world movement is acknowledged as the chief factor, and the origin of movement attributed to the soul. The causes of error are investigated with greater accuracy and found chiefly in the imperfection of our perceptions. The notions are paired with their opposites, and the preference for dichotomy is manifest, but is not suffered to stiffen into a conventional rule.

Plato remains in this period faithful to his custom of fixing in a literary form only certain aspects of his thoughts, obliging us to supplement by inferences what he omits to mention. Neither the Theaetetus nor the Parmenides are systematic accounts of any part of the doctrine which probably was imparted to Plato's pupils according to the precepts of the Phaedrus. The centre of gravity of the The Platonic system has been changed without recapitulating change all the details it carried with it, and the dialogues written

Beginning of a reform in dialectic. Remoteness of the ideal. Syncorrelated with one another and with particular things. The soul as source of movement acknowledged as chief factor. Preference for dichotomy.

explicit. Plato's dialogues are still works of art.

after the change continue to be works of art rather than expositions of doctrine. They are only ideal samples of conversations held in the Academy, and the artistic purpose of harmonious proportion is quite as evident in these conversations on abstract subjects as in the more poetical Symposium. In these works, as in the preceding, from the Symposium onwards, we have didactic conversations between pupil and master, not as in earlier works like the Gorgias, discussions between men of opposed convictions. The pupil is led by an ascending way so that at each

Their protreptic and educational

character.

The ideal recedes. and becomes more divine. but is approached continually.

turning point he believes himself to reach the summit. when a new horizon is opened, leading higher, and at the end the infinite ideal of knowledge remains still high above the highest summits hitherto described. protreptic character is maintained in the critical dialogues no less than in the constructive works. In the Republic the idea of the Good remained beyond the reach of Adeimantos and Glaucon; in the Phaedrus the ideal rhetoric appeared as a powerful ideal beyond the understanding and ability of the greatest orators of the time: in the Theaetetus knowledge appeared at a height much above all human opinions, even those which guess the truth correctly. In the Parmenides the objects of knowledge are shown not to correspond to poetic metaphors, and to be attainable only by a difficult exercise of In all these cases the rising soul of a lover reason. of philosophy is the chief object of literary exposition. The contents of philosophy are mentioned occasionally and never exhaustively. The distance between the philosopher and vulgar humanity is increasing while the philosopher's constant aim is to approach his ideal of the divinity.

The occasional glimpses of theory show us a great wealth of intellectual life, and a consciousness of some cardinal conditions of truth. The chief results arrived at by Plato at this stage appear to be: the subjectivity of sensations, the unity of consciousness in the act of judgment, the plurality and mutual relation of the highest kinds of Being, the universal analogy between great and small things which must be considered all with equal care in order to increase our knowledge. The method proposed leads to a general system of science, some aspects of which are developed in the three following dialectical dialogues.

CHAPTER VIII

NEW THEORY OF SCIENCE

As the Socratic stage was followed by positive ethical exposition, so the second critical stage was followed by positive logical and metaphysical teaching.

WE have seen Plato begin his literary career with small critical dialogues, culminating in Protagoras, Meno, and Euthydemus, and progressing from this first critical stage to the positive exposition of some of his moral, political, and educational theories in the Gorgias and later works up to the Phaedrus. In like manner the second critical stage, manifest in the Theaetetus and Parmenides, was followed by some dialogues full of positive metaphysical and logical theories, skilfully treated with regard to questions of purely formal importance. This indirect manner of exposition is prominent in the three dialectical dialogues which follow the Parmenides, namely the Sophist, Politicus, Here, as in the preceding works, we do and Philebus. not find a systematic exposition of doctrine, but occasional glimpses which betray studies very remote from those of middle Platonism, and show us a part of that 'longer way' alluded to in the Republic as leading to the knowledge of truth.

I. The Sophist.

The aim is formally, to define the Sophist; really to expound Plato's views on

In this dialogue the definition of the Sophist is only a pretext for the exposition of Plato's views on scientific method, on the origin of error, and on the nature of true Being. These views are presented in a form which leaves no doubt as to the author's own convictions and his judgments about other philosophers. The historical method of comparing existing theories and contradictions is here maintained, as in the *Theaetetus* and *Parmenides*,

but with greater maturity of treatment. In this respect, scientific as well as in the manner of the didactic proceeding accompanied with frequent quotations of results obtained before, and with recapitulations after each progress of the argument, the Sophist approaches more nearly to the writings of Aristotle than any earlier dialogue of Plato. The dialogical form is still preserved, but the answers to the for the most part only confirm opinions expressed in the manner question, so that they could easily be omitted.

While in the Parmenides it was still assumed as natural and necessary that a dialectical exposition must be given in the form of a conversation (137 B: τίς οὖν μοὶ ἀποκρινεῖται; ἡ ὁ νεώτατος;), we see in the Sophist for the first time a clear admission that philosophical teach- Coning may be given in the form of a continuous lecture tinuous (217 C: πότερον είωθας ήδιον αὐτὸς ἐπὶ σαυτοῦ μακρῷ λόγω διεξιέναι λέγων τοῦτο, δ αν ἐνδείξασθαί τω βουληθής, ή δι' έρωτήσεων, οίον ποτε καὶ Παρμενίδη γρωμένω . . . παρεγενόμην). If we take into account that this form of continuous lecture prevails in the Timaeus and Critias and some parts of the Laws, which are acknowledged to be late works, it becomes evident that the Sophist is in this respect intermediate between Parmenides and Timaeus. This inference is strengthened by the observation that in an admittedly early work, the Prota- Not as goras, lecturing is condemned and dialogical discussion in Protarequired (Prot. 334 D: ἐγὼ τυγχάνω ἐπιλήσμων τις ὢν goras. ανθρωπος, καὶ ἐάν τίς μοι μακρὰ λέγη, ἐπιλανθάνομαι περὶ ού αν η ο λόγος . . . σύντεμνέ μοι τας αποκρίσεις και βραγυτέρας ποίει, εί μέλλω σοι έπεσθαι).

Thus we see how Plato advanced from the form of philosophical conversations to that form of a philosophical lecture or dissertation which has been adopted Logical by his pupil Aristotle and by the majority of later philo-signifisophers. This fact is not without logical importance. In conversation at least two persons are wanted to elaborate the truth. This implies a stage of personal

method. Use of historical comparisons. Approach of Aristotle.

exposition admitted as possible

of the change.

uncertainty or at least the absence of a recognised authority. The thinker who has arrived at the highest degree of certainty needs only receptive hearers to whom he may communicate his knowledge, and looks upon discussion as useless and tiresome. The earliest works of Plato were discussions; even later, despite the increasing authority of Socrates, the persons represented as partners in his conversation still enjoyed the freedom of expressing other views. In the Theaetetus Socrates is represented as desiring to discuss freely philosophical difficulties with Theodoros rather than with a young man who dares not go against his authority. It is only in the Parmenides that discussion (πολυπραγμονείν) is declared useless. This is a logical mode of regarding the matter and amounts to this: whoever is in possession of truth can impart it to others without expecting an advance of knowledge from the conflict of opinions. Or, truth is the result of the activity of one soul, not of the co-operation of many. In all the six latest dialogues Plato remained faithful to this principle, which he adopted definitively in the Parmenides. There is no discussion in the Sophist and Politicus, nor in the Philebus and the Laws. In the Timaeus and Critias even the dialogical form is extinct. Plato appears to have abandoned conversational equality between investigating friends, he prefers now a didactic authority of one Master of wisdom.

Form of dialogue gradually relinquished.

Consciousness of method. The consciousness of method is also increasing. The art of reasoning, postulated already in the Phaedo (90 B: ή περὶ τοὺς λόγους τέχνη), is now a reality and bears the name of a logical method (Soph. 227 A: τῶν λόγων μέθοδος), which remained in the highest esteem among all later philosophers. Many translators of Plato refrained from the identification of μέθοδος with the modern term method, as if they were afraid to credit an ancient Greek philosopher with a consciousness of regulated proceeding which seems to be a privilege of recent science. Thus, for instance, Schleiermacher renders μέθοδος by

'das erklärende Verfahren,' Deuschle by 'der Gang Meaning der Untersuchung,' Müller by 'der Fortgang unserer of métodos Erörterung.' This is really a wrong cautiousness, and Jowett and Campbell were perfectly right in translating μέθοδος here by 'method.' In earlier dialogues, as Phaedo (79 E, 97 B) and Republic (435 D, 510 B C, 531 C, 533 B C, 596 A), this word had not yet a fixed meaning and was equivalent to 'argument,' 'study,' or 'way of reasoning.' In the Phaedrus μέθοδος (269 D, 270 D) is used in the same primitive meaning of 'way of reasoning.' In the Theaetetus (183 c) it means 'hypothesis' or 'theory.' But in the Sophist there appears for the first time a 'logical method,' essentially different in form and contents from the διαλεκτική μέθοδος of the Republic (533 c), which meant no more than the study of dialectic, or vision of the idea of Good. Here the 'logical method' means what up to the present time is known as the method of classification. or scientific method generally.

definite.

This method neglects nothing however insignificant it Disinmay appear to be, and seeks truth quite independently of terestedall practical applications or advantages (227 A: τη των ness of λόγων μεθόδφ σπογγιστικής ή φαρμακοποσίας οὐδὲν ήττον οὐδέ τι μᾶλλον τυγγάνει μέλον, εἰ τὸ μὲν σμικρά, τὸ δὲ μεγάλα ήμᾶς ἀφελεῖ καθαῖρου). Its aim is pure knowledge, which depends upon the distinction of natural affinities and similitudes between different things, without any prejudice in favour of one subject or another (227 B). Of this disinterested impartiality of pure science Plato gives curious examples which show his tendency to free himself from every authority or reigning opinion. The art of human war, he says, belongs to the general kind of hunting, no less surely than the art of vermin-destroying, despite the greater vanity of man-killers (227 B, cf. Theaet. 174 D).

science.

The philosopher finds out the true similarities and Similarity differences which allow an exact definition of each kind of beings as belonging to a more general class (235 c: πάντως ούτε ούτος ούτε άλλο γένος ούδεν μή ποτε εκφυγόν

and difference impartially

surveyed. without trusting appearances or following arbitrary lines.

notions

too much

neglected.

επεύξηται την των ούτω δυναμένων μετιέναι καθ' έκαστά τε καὶ ἐπὶ πάντα μέθοδον). The greatest care must be taken about apparent similarities (231 A: τον δε ἀσφαλή δεί πάντων μάλιστα περί τὰς όμοιότητας ἀεὶ ποιείσθαι τὴν φυλακήν · όλισθηρότατον γάρ τὸ γένος). The temptation to mix all things and to make the great appear as small and the like as unlike is the sign of a man who is only beginning to approach the problem of being, and delights in contradictions (259 D: τὸ δὲ ταὐτὸν ἔτερον ἀποφαίνειν άμη γέ πη και τὸ θάτερον ταὐτὸν και τὸ μέγα σμικρὸν και τὸ δμοιον ανόμοιον, καλ γαίρειν ούτω ταναντία αελ προφέροντα έν τοις λόγοις, ούτε τις έλεγχος ούτος άληθινός άρτι τε τών Definition οντων τινος εφαπτομένου δήλος νεογενής ων). Many notions of primary as to which apparently there is no disagreement among disputants are insufficiently defined, and ought to be investigated again, however clear and simple they appear at first sight (242 c: τὰ δοκοῦντα νῦν ἐναργῶς ἔγειν ἐπισκέψασθαι πρώτον, μή πη τεταραγμένοι μεν ώμεν περί ταῦτα, ραδίως δ' αλλήλοις όμολογωμεν ώς εὐκρινώς έχοντες). The true logician follows his opponents on their own ground and refutes them according to their own principles (259 C D: γαλεπον αμα καὶ καλον . . . τοις λεγομένοις οίον τ' είναι καθ' έκαστον έλέγχοντ' έπακολουθείν, όταν τέ τις έτερον δυ πη ταύτον είναι φη και δταν ταύτον ον έτερον, ἐκείνη καὶ κατ' ἐκεῖνο ὁ φησι τούτων πεπονθέναι πότερον). seeks the truth first for himself and then for those who are able to partake of such investigations (264 Ε: ἐπιδεί-

Scientific truth the philosopher's single nim. Generali-

sation and division proceeding from the simple to the complex.

This aim is reached by the subdivision of notions into indivisible ultimate kinds (229 D: καλ τοῦτο σκεπτέον, εἰ άτομον ήδη έστὶ παν, ή τινα έγον διαίρεσιν άξίαν ἐπωνυμίας), and by a training which consists in a consecutive selection of examples, beginning with those which present less difficulty and rising progressively to the most difficult problems (218 c: ὅσα δ' αὖ τῶν μεγάλων δεῖ διαπονεῖσθαι καλώς, περί των τοιούτων δέδοκται πάσι και πάλαι το πρό-

ξομεν μάλιστα μεν ήμιν αυτοίς, έπειτα δε και τοίς εγγυτάτω

γένει της τοιαύτης μεθόδου πεφυκόσιν).

τερον εν σμικροίς και ράοσιν αὐτὰ δείν μελετάν, πρίν εν αὐτοίς τοι̂ς μεγίστοις). This notion of logical exercise is here new, and did not occur in any earlier work of Plato. When Parmenides recommended dialectical exercise, he Dialectook as subject of this 'play' at once the highest notions of the one and the many; also the illustration of the nature of justice in the Republic through the idea of the state was not a vulgar example. Now we see that any insignificant object is admitted to be a convenient model for logical exercise (218 D: βούλει δήτα περί τινος των φαύλων μετιόντες πειραθώμεν παράδειγμα αὐτὸ θέσθαι τοῦ Here we are at a considerable distance from the time when observation of stars appeared to be a useless and even pernicious occupation if not immediately connected with a knowledge of the general laws of astronomy. Now not only stars, but all animals and plants come within the range of observation and investigation. When Plato in the Republic described the philosopher as desiring intensely every kind of knowledge, he had not yet drawn all the consequences from this universal desire, and he despised many kinds of knowledge which in the Sophist are gravely included in the system of science. Newly discovered kinds are named by means of new words, with the observation that we ought not to pay too much attention to the existing names, which are often understood in different ways by different men (218 c: δεί άεὶ παντὸς πέρι τὸ πραγμα αὐτὸ μάλλον διὰ λόγων ή τοὔνομα μόνον συνομολογήσασθαι χωρίς λύγου).

Dialectic is no longer, as in the Republic, the knowledge of the Good, but the science of division of notions, as in the Phaedrus. This important coincidence between the Phaedrus and the Sophist (253 C D: ἐπιστήμης . . . ἴσως της μεγίστης . . . των έλευθέρων . . . το κατά γένη διαιρείσθαι και μήτε ταὐτὸν ον είδος έτερον ἡγήσασθαι μήτε έτερον ον ταὐτὸν . . . τῆς διαλεκτικῆς Φήσομεν ἐπιστήμης είναι) is difficult to account for by those who place the Phaedrus before the Republic. In earlier dialogues dialectic was

tical exercise to be first no besu obvious examples. No object of knowledge to be despised.

logician is not to be misled by common language. Division of concepts a link between the Phaedrus and the Sophist.

But the process is here more elaborately described. merely the art of asking and answering questions (Crat. 390 c), as it was for Xenophon. Now the dialectician follows each idea through its manifold appearances, and distinguishes within each notion many differences, uniting again one notion with many others into one higher kind (253 D: μίαν ἰδέαν διὰ πολλῶν, ἐνὸς ἐκάστου κειμένου χωρίς, πάντη διατεταμένην ἱκανῶς διαισθάνεται, καὶ πολλὰς ἐτέρας ἀλλήλων ὑπὸ μιᾶς ἔξωθεν περιεχομένας, καὶ μίαν αὖ δι' ὅλων πολλῶν ἐν ἐνὶ ξυνημμένην, καὶ πολλὰς χωρίς πάντη διωρισμένας...). The ideas here mentioned can evidently only be notions of the human mind, never the self-existent ideas of a space above heaven.

Communion of ideas not transcendental.

The aim of dialectical operations is precisely to learn the relation between ideas (253 Ε: τοῦτο δ' ἔστιν, ή τε κοινωνείν εκαστα δύναται καί όπη μή, διακρίνειν κατά γένος ἐπίστασθαι). Many definitions of notions are given, and we are asked to determine the specific difference which distinguishes each notion from others of the same kind (232 A). Here again, as in the Theaetetus, Plato insists upon the difference between an enumeration of examples and the definition of the class to which these objects belong (240 A: τὸ διὰ πάντων τούτων, ἃ πολλὰ εἰπων ἡξίωσας ένὶ προσειπείν ὀνόματι, φθεγξάμενος εἴδωλον ἐπὶ πᾶσιν ώς ἐν ου). We have here the teacher who warns his pupils repeatedly against familiar logical errors. His own definitions are not always serious, as, for instance, when he calls the sophist a paid hunter after wealth and youth (223 B), a merchant in the goods of the soul (224 c, cf. Prot. 313 c), a retailer of the same sort of wares (224 D), a manufacturer of the learned wares he sells (224 E), a money-maker of the eristic kind (226 A), a purger of souls who clears away notions obstructive to knowledge (231 E), a magician and imitator of true being (235 A), and a dissembler who in private and in short speeches compels the person who is conversing with him to contradict himself (268 c). This is intended to show the various relations of notions apparently very distant from each

Propaedeutic through playful definitions. other, and can only be taken as a sample of dialectical exercise.

There are definitions of other notions to which a serious importance seems to have been attached, and one of these generalises a view already enunciated in the Symposium:

Symp. 205 Β: ποίησίς ἐστίν τι πολύ · ή γάρ τοι έκ τοῦ μὴ ὅντος εἰς τὸ δυ ἰόντι ότφοῦν αἰτία πασά έστι ποίησις, ώστε καὶ αἱ ὑπὸ πάσαις ταῖς τέχναις έργασίαι ποιήσεις είσὶ καὶ οί τούτων δημιουργοί πάντες ποιηταί.

Soph. 265 Β: ποιητικήν πάσαν more than έφαμεν είναι δύναμιν, ή τις αν αιτία γίγνηται τοῖς μή πρότερον οὖσιν ὖστερον γίγνεσθαι.

219 Β: . . . πᾶν ὅπερ ᾶν μὴ πρότερόν τις δν υστερον είς οὐσίαν άγη, τὸν μὲν ἄγοντα ποιείν, τὸ δὲ ἀγόμενον ποιείσθαί πού φαμεν.

Others more serious. ' Making ' includes poetry.

This definition of creation as the power of bringing into Being anything not existing before presents in both dialogues a characteristic difference resulting from the increasing importance attributed to the personal agent. In the Symposium Plato spoke of an impersonal cause of new existence and named it for the purpose of his argument 'poetry,' thus extending the notion of poetry to all kinds of making. In the Sophist the formulation is sharper, and the opposition between the agent and the object of activity is introduced, with the use of the favourite term δύναμις, familiar since the Republic.

More important is the definition of true Being as any- Definition thing that has the power of activity or passivity, to act or of Being to undergo an influence from anything else, be it even only once (247 D: λέγω δή τὸ καὶ ὁποιανοῦν κεκτημένον δύναμιν είτ' είς το ποιείν έτερον ότιοῦν πεφυκός είτ' είς το παθείν καλ σμικρότατον ύπο του φαυλοτάτου, καν εί μόνον είσάπαξ, πᾶν τοῦτο ὄντως είναι · τίθεμαι γὰρ ὅρον ὁρίζειν τὰ ουτα, ώς έστιν οὐκ ἄλλο τι πλην δύναμις). This is here proposed after the complaint that none among the earlier philosophers has given a definition of Being, and that many would be unable to do it (247 D). Thus we must accept it as Plato's own view at the time of writing the Sophist. This definition does not correspond to the

in reply to the Materialists: as capability of acting or being acted on. Dynamic notion of existence.

Not, like the old ideas, unalterably fixed primitive ideas, which according to the Symposium remain unaffected by the changes occurring in the world. If we compare it with the definition of the soul as the first cause of movement, it becomes very probable that Plato attributed true Being to souls more than to anything else, and this is confirmed by the following argumentation in which the author states clearly that the soul acts in acquiring knowledge, while the substance of things undergoes the influence of the soul's activity (248 D: τὴν ψυχὴν γυγνώσκευν, τὴν δ' οὐσίαν γυγνώσκεσθαι . . . Ε: τὴν οὐσίαν δὴ . . γυγνωσκομένην ὑπὸ τῆς γνώσεως, καθ' ὅσον γυγνώσκεται, κατὰ τοσοῦτον κινεῖσθαι διὰ τὸ πάσχειν, δ δή φαμεν οὐκ ἂν γενέσθαι περὶ τὸ ἠρεμοῦν).

Knowledge an activity.

Ideas are no longer true Being.

If this view is maintained, the objects of knowledge are here not unchanging and unaffected ideas, but our own notions, which undergo some changes under the influence of our intellectual activity. This agrees well with the view put forth in the Parmenides, and we may accept it as Plato's conviction with the restrictions which are made by himself in connection with this passage. He says that true Being must have movement, life, soul, and reason (248 E: ως άληθως κίνησιν καὶ ζωήν καὶ ψυχήν καὶ φρόνησιν η ραδίως πεισθησόμεθα τω παντελώς δυτι μή παρείναι, μηδε ζην αὐτό μηδε φρονείν, άλλα σεμνόν και άγιον, νοῦν οὐκ ἔχον, ἀκίνητον ἐστὸς είναι;). Students of the Sophist who read this dialogue with the prejudice that true Being can never mean anything for Plato besides the ideas, have drawn the curious inference from this passage that Plato credits here the ideas with life and a soulwhy not with a body also? Such ideas, if still named ideas, could evidently be nothing else than individual beings, very similar to human persons.

The Soul is now seen to be the truest Being.

Any unprejudiced reader who remembers what is said in the *Phaedrus* about the soul as origin of movement, and in the *Laws* about the stars as bodies of individual gods (967 A-E), must infer from this passage that here true Being means no longer ideas but souls, including human souls. This view is well prepared by the theory of unity of consciousness in the Theaetetus and by the contradictions shown in the Parmenides as resulting from self-existing ideas. Only the circumstance that the dialectical dialogues, being more difficult, were less read, could lead to the reigning conception of Platonism as a mere theory of ideas. We have seen that the ideas appeared first in the Symposium and were maintained only in three other dialogues (Phaedo, Republic, Phaedrus), undergoing a change from immanence to transcendence, and becoming at last ideal models of things, which apart from their copies retain their own existence. After the Parmenides we have no reason to identify true Being with ideas in this sense. We shall see in later works of Plato that he more and more dedicated himself to the investigation of notions of his own soul and of the particulars of experience. He says unmistakably that reason and life are possible only in a soul (249 A: νοῦν μὲν ἔγειν, ζωὴν δὲ μή, φῶμεν; -καὶ πῶς; -άλλὰ ταῦτα μὲν ἀμφότερα ένοντ' αὐτῷ λέγομεν, οὐ μὴν ἐν ψυχῆ γε φήσομεν αὐτὸ ἔγειν αὐτά; - καὶ τίν' αν ἔτερον ἔχοι τρόπον; - άλλα δῆτα νοῦν μὲν καὶ ζωὴν καὶ ψυγήν, ἀκίνητον μέντοι τὸ παράπαν, ἔμψυγον ου, έστάναι; - πάντα έμοιγε άλογα ταθτ' είναι φαίνεται. -- καὶ τὸ κινούμενον δη καὶ κίνησιν συγχωρητέον ώς ὄντα).

We see here movement recognised as true Being. the Phaedrus and Laws the cause of movement is the soul. Here equally in the whole passage the soul is identified with true Being. The only difficulty of interpretation Plurality might be seen in the ambiguity of the term 'soul,' as it is of souls not always the individual soul. But we have seen that in the Phaedrus the individual soul was meant, as results from the avowed purpose of the exposition there given. Equally in the Laws the priority of soul has a practical application to the individual life of each citizen, and unity of soul in the universe is even denied. Thus we must admit as Plato's view a plurality of souls, and this agrees with the myth of the Timaeus. In the Timaeus these

Thus the theory of ideas has been modified: first passing from immanence to transcendence. then becoming models of things. Now they notions inherent in a soul.

acting and being acted upon.

souls are said to be created by one universal creator. But this is a mythical allegory which means only the substantial similarity of all souls. Whatever Plato's opinion about the relation of the individual human soul to the Divinity could have been, so much is clear from the above comparisons, that he credited the individual soul with true existence, the power of acting and being acted upon. The movement of the objects of knowledge is limited by Plato in so far as without the fixity of notions knowledge appeared impossible (249 c: τὸ κατὰ ταὐτὰ καὶ ώσαύτως καὶ περί τὸ αὐτὸ δοκεί σοι χωρίς στάσεως γενέσθαι ποτ' αν ; οὐδαμῶς • Τί δ'; ἄνευ τούτων νοῦν καθορᾶς ὄντα ἡ γενόμενον ầν καὶ ὁπουοῦν; — ἥκιστα). The object of philosophy is the divine substance of Being, which is not attainable to vulgar minds (254 A: ὁ φιλόσοφος, τῆ τοῦ ὄντος ἀεὶ διὰ λογισμών προσκείμενος ιδέα, διά τὸ λαμπρὸν αὖ τῆς χώρας οὐδαμῶς εὐπετής ὀφθήναι τὰ γὰρ τής των πολλών ψυχής δμματα καρτερείν πρὸς τὸ θείον ἀφορώντα ἀδύνατα).

Existence implies unity and totality.

A certain

fixity or stability

required

of know-

still

But this does not mean that we have to imagine this substance as the idea of Good in the Republic. The notion of Being extends to all individual things (237 D: καὶ τοῦτο ἡμῖν που φανερόν, ὡς καὶ τὸ τὶ τοῦτο ἡῆμα ἐπ' ὄντι λέγομεν ἐκάστοτε · μόνον γὰρ αὐτὸ λέγειν, ὅσπερ γυμνὸν καὶ ἀπηρημωμένον ἀπὸ τῶν ὄντων ἀπάντων, ἀδύνατον) which constitute unities of thought (237 D: ἀνάγκη τόν τι λέγοντα ἔν γέ τι λέγειν), each of them an existing whole (245 D: οὔτε οὐσίαν οὔτε γένεσιν ὡς οὖσαν δεῖ προσαγορεύειν τὸ ἐν ἡ τὸ ὅλον ἐν τοῖς οὖσι μὴ τιθέντα).

The communion of kinds. The theory of the mutual relation (κοινωνία) of notions among each other is proposed after the refutation of two contradictory suppositions. That all notions cannot be predicated of each other (252 D: πάντα ἀλλήλοις ἐῶμεν δύναμιν ἔχειν ἐπικοινωνίας; ... τοῦτό γέ που ταῖς μεγίσταις ἀνάγκαις ἀδύνατον) is seen from the impossibility of joining in one judgment contradictory ideas, as, for instance, immobility and movement. On the other hand, if each idea stands apart from all others (251 E: μηδενὶ μηδὲν

μηδεμίαν δύναμιν ἔχειν κοινωνίας εἰς μηδέν), all reasoning becomes impossible. It remains only to admit that some notions agree and others not; a special investigation is needed to find which is the case in each instance (253 A). This is illustrated by the example of letters, which form syllables and words only in certain combinations, determined by the science of grammar. Similarly the combinations of ideas are the object of dialectic. But Plato warns us against the illusions of thought which can be produced by the charm of skilful eloquence (234 c).

Only
certain
combinations
possible.

The recognition of the power of a perverse rhetoric goes so far that it implies a certain opposition between pure thought and acquired experience, conceding to the latter the power of correcting the illusions of thought. Such a view is far removed from the triumphant idealism of the Republic and Phaedrus, and cannot be interpreted otherwise than by an increasing esteem of outward experience, which is common to the Sophist and the Laws:

Increasing recognition of the value of experience.

Soph. 284 D: τοὺς πολλοὺς τῶν τότε ἀκουόντων ἄρ' οὐκ ἀνάγκη, χρόνου τε ἐπελθόντος αὐτοῖς ἰκανοῦ καὶ προϊούσης ἡλικίας, τοῖς τε οὔσι προσπίπτοντας ἐγγύθεν καὶ διὰ παθημάτων ἀναγκαζομένους ἐναργῶς ἐφάπτεσθαι τῶν ἄντων, μεταβάλλειν τὰς τότε γενομένας δόξας, ὅστε σμικρὰ μὲν φαίνεσθαι τὰ μεγάλα, χαλεπὰ δὲ τὰ ῥάδια, καὶ πάντα πάντη ἀνατετράφθαι τὰ ἐν τοῖς λόγοις φαντάσματα ὑπὸ τῶν ἐν ταῖς πράξεσιν ἔργων παραγενομένων.

Legg. 769 D: τοιούτον τοῦ νομοθέτου βούλημα · πρῶτον μὲν γράψαι τοὺς νόμους πρὸς τὴν ἀκρίβειαν κατὰ δύναμιν ἱκανῶς · ἔπειτα προϊόντος τοῦ χρόνου καὶ τῶν δοξάντων ἔργφ πειρώμενον · · · πάμπολλα ἀνάγκη παραλείπεσθαι τοιαῦτα, ὰ δεῖ τινὰ Ευνεπόμενον ἐπανορθοῦν · · · ·

888 Δ: νέος εί · προϊών δέ σε δ χρόνος ποιήσει πολλά δυ νῦν δοξάζεις μεταβαλόντα ἐπὶ τἀναντία τίθεσθαι · περίμεινον οὖν εἰς τότε κριτής περὶ τῶν μεγίστων γίγνεσθαι.

It was a natural consequence of the extension of detailed investigations that Plato began to think more highly of experience than he did at the time when he was still inebriated with his discovery of absolute ideas. For the same reason it is impossible to explain the above passage without the admission that the writer is an aged man. He knows that truth is reached through bitter

experience, and that experience can prevent the pain to which youth without a guide is often exposed (234 E: ήμεις σε οίδε πάντες πειρασόμεθα και νυν πειρώμεθα ώς έγγυτατα άνευ των παθημάτων προσάγειν).

This concession to practical experience, which led to the substitution of a second best state for the ideal Republic, did not change the fundamental postulate of earlier Platonic logic, namely the fixity of ideas, without which knowledge and reason would become impossible (249 C: πρός γε τοῦτον παντὶ λόγφ μαχετέον, δς αν ἐπιστήμην η φρόνησιν η νούν ἀφανίζων ἰσγυρίζηται περί τινος ὁπηούν). The ideas exist in the soul and are quite as invisible and intangible as the soul in which they abide (247 AB). There are certain highest kinds (254 D: μέγιστα τῶν γενῶν), which Plato enumerates as Being, rest, motion, identity, and difference (ου, στάσις, κίνησις, ταὐτόν, θάτερου, 254 D E). The idea of difference explains the notion of Not-Being

The highest kinds, or categories.

Not-Being. alwavs relative.

Not-Being is difference. Preparation in previous dialogues

for this

concep-

which presented such difficulties to Plato's predecessors Being and (237 c-238 D). Being is absolute or relative (255 c: oluai σε συγγωρείν των όντων τὰ μὲν αὐτὰ καθ' αὑτά, τὰ δὲ πρὸς ἄλληλα ἀεὶ λέγεσθαι), while Not-Being is always relative. Not-Being It is impossible to affirm that something contradictory to Being exists (257 B, 258 E). But Not-Being means only different Being, and denotes the relation of notions which do not agree with each other (256 D). Of each thing an infinity of negations can be predicated, because we can compare with each Being all different Beings which are not what the chosen Being is (256 Ε: περὶ ἕκαστον ἄρα των είδων πολύ μέν έστι τὸ ὄν, ἄπειρον δὲ πλήθει τὸ μὴ ὄν . . . 257 Α: καὶ τὸ ὄν . . . ὅσα πέρ ἐστι τὰ ἄλλα, κατὰ τοσαθτα οθκ έστιν · ἐκείνα γὰρ οθκ ον εν μὲν αθτό ἐστιν, άπέραντα δὲ τὸν ἀριθμὸν τάλλα οὐκ ἔστιν αὖ). This logical solution of the riddle which caused so much difficulty to Parmenides has been prepared already by the mention of a perception of opposites in the Theaetetus (186 B), and by the antinomies of the Parmenides. Such antinomies would have no meaning after a definition of Not-Being as

different Being, and after the transition from a meta-tion of physical idea of Not-Being to the logical conception of Other-Other-Being.

Being.

imperfect views could not be later than the

The term Not-Being had been used already in the These Republic (478 c), where, as in the Parmenides, it was declared impossible to be a subject of thought or opinion. Such a declaration coming after the inquiry of the Sophist would be unaccountable, and has never been accounted for by those who believe the Republic to be later than Sophist. the Sophist. For the explanation of Not-Being in the Sophist is not a passing fancy like the creation of an object of ignorance in the Republic. It is an important step in the history of Philosophy, and brings Not-Being from the region of metaphysical speculation into the dry light of formal logic. It is a consequence of the recog- First clear nition of Relation as a chief factor of knowledge, without which error in pure thought is inconceivable (237 A: τετόλμηκεν ό λόγος οὖτος ὑποθέσθαι τὸ μὴ δν είναι • ψεῦδος γαρ οὐκ αν άλλως ἐγίγνετο ὄν).

conception of Relation as a condition of thought. possibility of errors.

If the ideas were always perceived as they are, the participation of concrete things in them would allow of a Consedetermination free from error. But as the relations of quent ideas between each other are not evident to our intuition. we commit errors by supposing relations which are not. The question of error was left unsettled in the Cratulus (429 D), and in the Theaetetus (187 D, cf. 200 D). It is only here that Plato explains error as a judgment about Not-Being, while in all earlier works the possibility of thinking or judging Not-Being was denied in agreement with Plato's philosophical predecessors. Not-Being is recognised as a notion in one line with Being (260 B: 70 μευ δη μη δυ ημίν ευ τι των άλλων γένος δυ ανεφάνη, κατά πάντα τὰ ὄντα διεσπαρμένου), from which it differs by its relativity.

While the elements of earlier Platonic logic were single Judgment ideas, the importance of judgment is here asserted as a a first first element of knowledge. Judgment is analysed into element

of knowledge. Subject and predicate.

The terms here first accurately defined. its essential parts, and for the first time Plato establishes the distinction between the subject and predicate of a proposition (261 E). He divides the signs used in language into ονόματα and ρήματα and states expressly that ρήμα means the sign of an action (262 A: τὸ ἐπὶ ταῖς πράξεσιν ον δήλωμα ρημά που λέγομεν). This is a new term, because in earlier dialogues δημα, even if used along with ὄνομα, meant a phrase or expression. Thus, for instance, in the Protagoras (341 E, 343 B) the term phua is used for savings of Simonides and Pittacos. In the same meaning of a saying or phrase δημα is often used (Prot. 342 E, Crat. 399 B, 421 B, E, Rep. 336 A, 463 E, 498 E, 562 C, Phaedr. 269 B. Theaet. 190 C, Legg. 660 A, 669 C, 839 B, 840 C), also in such expressions as ρημα καὶ λόγον (Rep. 473 E), ονόματα καὶ ρήματα (Apol. 17 B, Crat. 425 A, Symp. 198 B, 221 E, Rep. 601 A, Theaet. 168 B, 184 C, 206 D), ρημα καὶ δόγμα (Rep. 464 A, Soph. 265 c, Legg. 797 c). In other cases bnua means a single word (Rep. 462 c, Theaet. 165 A, 183 B, Soph. 237 D, Tim. 49 E, Legg. 627 D, 656 C, 669 E, 783 c, 800 d, 906 c) or textual expression (Euthyd. 305 A, Gorg. 450 E, 489 B, Phaed. 102 B, Rep. 340 D, Phaedr. 228 D, 271 C, Theaet. 166 D, 190 C, Soph. 257 B). It is quite another thing in the above passage of the Sophist in which ὄνομα and ῥημα have each an unmistakable technical meaning, as subject and predicate, clearly introduced for the first time. The term ρημα is used in this meaning of predicate also in some later instances (Polit. 303 c, Legg. 838 B). If we compare Cratylus and Sophist on the connection between ὄνομα, ῥημα, and λόγος, it might at first sight appear that the later dialogue repeats only a definition given in the earlier:

The Cratylus compared.

Crat. 425 A: ἐκ τῶν ὀνομάτων καὶ ἡημάτων μέγα ήβη τι καὶ καλὸν καὶ δλον συστήσομεν . . . τὸν λόγον τῆ ὀνομαστικῆ ἡ ἡητορικῆ ἡ ἤτις ἐστὶν ἡ τέχνη.

481 B : εί έστι μή δρθώς διανέμειν τὰ δνόματα . . . είη αν καὶ ρήματα Soph. 262 A: εξ δνομάτων μόνων συνεχώς λεγομένων οὐκ ἔστι πυτὲ λόγος, οὐδ' αὖ ρημάτων χωρὶς δνομάτων λεχθέντων.

Ο : οὐδεμίαν γὰρ οῦτε οῦτως οῦτ' ἐκείνως πρᾶξιν οὐδ' ἀπραξίαν οὐδὲ οὐσίαν ὄντος οὐδὲ μὴ ὅντος δηλοῖ τὰ

ταὐτὸν τοῦτο ποιείν. εἰ δὲ ῥήματα καὶ ονόματα έστιν ουτω τιθέναι, ανάγκη καὶ λόγους λόγοι γάρ που . . . ή τούτων ξύνθεσίς έστιν.

φωνηθέντα, πρίν ἄν τις τοῖς ὀνόμασι τὰ δήματα κεράση · τότε δ' ήρμοσέ τε καὶ λόγος εγένετο εὐθὺς ή πρώτη συμπλοκή, σχεδόν τῶν λόγων δ πρῶτος καὶ σμικρότατος.

Many translators understood phua in the above passage of the Cratylus as 'verb' or 'predicate,' but if we compare other passages of the same dialogue it becomes evident that here also ρημα means 'phrase.' Plato deals with a succession of increasing units, beginning with a single letter, progressing to a syllable, a word, a phrase, and a speech. The parallelism of δνομαστική and δνομα, δητορική and ρημα confirms this, and λόγος means here not a sentence but a speech, or language generally; also in the second passage the progress from a wrong distribution of words to a wrong distribution of phrases is a plausible induction, while it would be unjustifiable to apply to the Cratylus a definition given only in the Sophist, and received first by the pupil as requiring nearer explanation (262 A: ταῦτ' οὐκ ἔμαθον, C: πῶs ἄρ' ὧδε λέγεις;). Even if we had not many other reasons to admit the priority of the Cratylus to the Sophist, this comparison would show that the distinction of subject and predicate, made in the Sophist, must be later than the opposition of words and phrases, which in the Cratylus is already familiar at a time when the need of a theory of predication was not yet felt.

A judgment, says Plato here, refers to things present, past, or future, and connects a predicate with a subject (262 D : δηλοί γάρ ήδη που τότε περί τῶν ὄντων ἡ γιγνομένων η γεγονότων η μελλόντων, καὶ οὐκ ὀνομάζει μόνον, άλλά τι καὶ περαίνει, συμπλέκων τὰ ρήματα τοις ονόμασι). This connection is not, as some logicians even now suppose, limited to an identity of subject and predicate, but presents not imply a great variety of aspects (251 A: λέγομεν ἄνθρωπον δή που πόλλ' άττα ἐπονομάζοντες, τά τε χρώματα ἐπιφέροντες αὐτώ και τὰ σχήματα και μεγέθη και κακίας και άρετάς, ἐν οίς πασι καὶ ἐτέροις μυρίοις οὐ μόνον ἄνθρωπον αὐτὸν είναι φαμέν, ἀλλὰ

Predication does identity: variety of predicates.

καὶ ἀγαθὸν καὶ ἔτερα ἄπειρα). This is misunderstood by those who are unable to grasp the relation between the one and the many, and believe that each judgment implies an identity (251 B: ὅθεν . . . τοῖς τε νέοις καὶ τῶν γερόντων τοίε όψιμαθέσι θοίνην παρεσκευάκαμεν εύθύς γάρ άντιλαβέσθαι παυτί πρόγειρον ώς άδύνατον τά τε πολλά έν καί τὸ 🕯 πολλά είναι, και δή που χαίρουσιν οὐκ ἐῶντες ἀγαθὸν λέγειν ἄνθρωπον, άλλα το μεν άγαθον άγαθόν, τον δε ἄνθρωπον ἄνθρωπον). What is here explained about the nature of the sentence applies also to the unspoken judgment (263 Ε : διάνοια καὶ λόγος ταὐτόν πλην ὁ μὲν ἐντὸς της ψυχης προς αυτην διάλογος άνευ φωνης γιγνόμενος τουτ' αὐτὸ ἡμῖν ἐπωνομάσθη, διάνοια . . . τὸ δέ γ' ἀπ' ἐκείνης δεύμα δια τού στόματος ίον μετά φθόγγου κέκληται λόγος). The negative judgment is not contradictory to its positive counterpart, and the negation means only a difference, leaving open an infinity of possibilities (257 B: οὐκ ἄρ', ἐναντίον ὅταν ἀπόφασις λέγηται σημαίνειν, συγγωρησόμεθα, τοσοῦτον δὲ μόνον, ὅτι τῶν ἄλλων τι μηνύει τὸ μή καὶ τὸ ου προτιθέμενα των επιόντων ονομάτων, μαλλον δε των πραγμάτων περί άττ' αν κέηται τὰ ἐπιφθεγγόμενα υστερον τῆς ἀποφάσεως ὀνόματα). Wrong judgments are refuted by showing the contradictions they imply (230 B). Such refutations are extolled as being not only of logical but also of moral importance (230 D: τον έλεγχον λεκτέον ώς άρα μεγίστη καὶ κυριωτάτη τῶν καθάρσεών ἐστι, καὶ τὸν άνελεγκτον αὖ νομιστέον, . . . τὰ μέγιστα ἀκάθαρτον ὅντα, dπαίδευτόν τε καὶ αἰσχρον γεγονέναι).

Negation not contradiction.

Refutation an instrument of moral training.

Importance of the new theory.

Plato presents his theory of negation and of predication as a truth which alone can account for the existence of error, and could only be denied under the penalty of being involved in constant contradictions (241 E). Ignorance, named here an ugliness of the soul (228 A), is always involuntary (228 c: ψυχήν γε ἴσμεν ἄκουσαν πᾶσαν πᾶν ἀγνοοῦσαν), being worst if he who is ignorant is under the illusion that he knows (229 c: ἀγνοίας . . . μέγα καὶ

γαλεπον άφωρισμένον είδος . . . το μη κατειδότα τι δοκείν είδεναι . . . τούτω μόνω της άγνοίας άμαθία τούνομα).

The most impressive passage of the Sophist (242 c- Conflict 251 A) represents the metaphysical and logical conflict between materialism and idealism, wherein Plato chooses a middle solution, thus confirming his criticism in the Parmenides of the primitive theory of ideas. The improved materialism here represented has, with some plausibility, been attributed by Siebeck 254 to Aristotle; the idealism here represented bears some relation to Plato's own views as expressed in Phaedo, Republic, and Plato's Phaedrus. The third or middle view proposed is the true existence of souls, not of animated ideas as some critics thought. Here, exactly as in the tenth book of the Republic and the Phaedrus, Plato, at the end of an argument on another notion, suddenly introduces the soul as corresponding best to the general notion first explained. There it was the notion of a self-moving principle—here it is the notion of true Being (248 E: τὸ παντελώς ὄν) which, besides movement, as postulated in the Phaedrus, must Dynamic have reason, and if reason, necessarily life (249 A: νοῦν μὲν ἔχειν, ζωὴν δὲ μή, φῶμεν; καὶ πῶs;). But reason and life are found only in a soul (249 A: ταῦτα μὲν ἀμφότερα ένόντ' αὐτῷ (τῷ παντελῶς ὄντι) λέγομεν, οὐ μὴν ἐν ψυχῆ γε with Soul. φήσομεν αὐτὸ ἔγειν αὐτά ;—καὶ τίν' αν ἔτερον ἔγοι τρόπον).

It results that the soul or souls correspond best to the idea of true existence, though Plato at the end does not insist on this conclusion, because his aim was only to show that both materialists and idealists have a too narrow conception of Being (246 A): earlier philosophers have taken it lightly, and spoke of quality and quantity of Being without a definition of their starting point (242 c: tions. εὐκόλως μοι δοκεί Παρμενίδης ήμιν διειλέχθαι και πας δστις πώποτε έπὶ κρίσιν ώρμησε τοῦ τὰ δυτα διορίσασθαι πόσα

between materialism and idealism.

mediating

aspect of Being identifies Being

Narrowness of earlier concep-

²⁸⁴ H. Siebeck, 'Platon als Kritiker aristotelischer Ansichten: III. Der Sophista,' in Zeitschrift für Philosophie und philosophische Kritik, Band 108, pp. 1-18, Leipzig 1896.

Being becomes the chief object of research, not the Idea of Good. τε καὶ ποιά ἐστιν). They invent fables as if they were speaking to children (242 c: μῦθόν τινα ἔκαστος φαίνεταί μοι διηγεῖσθαι παισὶν ὡς οὖσιν ἡμῖν) instead of analysing the chief concept of philosophy, the idea of Being. This substitution of Being as the ultimate aim of Dialectic instead of the earlier hegemony of the Good is one of the signs of the change which occurred in Plato's thoughts, from absolute ideas to the ideas of the human mind. At the same time the bold review of philosophical doctrines betrays a Master in metaphysics who could be nobody else than Plato alone, so that all doubts as to the authenticity of the Sophist must be dismissed.

Those who up to quite recent times ascribed the Sophist to another writer 255 had not considered the close

200 Ernst Appel (' Zur Echtheitsfrage des Dialogs Sophistes,' in vol. v. pp. 55-60 of the Archiv für Geschichte der Philosophie) and Huit (in vol. xviii. pp. 48-69, 169-188 of the Annales de philosophie chrétienne, Paris 1888) have added nothing to Schaarschmidt's arguments, which have been abundantly refuted by R. Pilger (Ueber die Athetese des platonischen Sophistes, Berlin 1871) and many others. Huit adds only a very strange objection (p. 175): he believes that the historical character of the Sophist is unplatonic, and that Plato never reviews his predecessors. This needs no refutation for anybody who knows the Theaetetus, the Phaedrus, or the Phaedo. Fouillée (La Philosophie de Platon, Paris 1888) was right in saying (p. xii. Préface) that to deny the authenticity of the Sophist and Politicus 'il faut être myope intellectuellement.' The logical importance of the Sophist has been recognised among other authors by: Bertini (Nuova interpretazione delle idee Platoniche, Torino 1876, p. 23 sqq.), Achelis ('Kritische Darstellung der platonischen Ideenlehre,' pp. 90-103 in vol. 79 of the Zeitschrift für Philosophie und philosophische Kritik, Halle 1881), Benn (The Greck philosophers, London 1882), Peipers (Ontologia Platonica, Lipsiae 1883, pp. 319-346), Lukas (Die Methode der Eintheilung bei Platon, Halle 1888), Apelt (Beiträge sur Geschichte der griechischen Philosophic, Leipzig 1891, pp. 67-99, also pp. 529-540 of vol. 145 of Neue Jahrbücher für Philologie und Pädagogik). Very peculiar are the views of Wolff (Die Platonische Dialektik, Halle 1875), who thinks that Plato ignored 'den Unterschied zwischen Gattung und Art.' and Uphues (Das Wesen des Denkens bei Plato, Landsberg 1881), who credits Plato with such opinions as: 'das Denken ist eine Verbindung der die Vorstellungen verbindenden Wörter zu Sätzen,' and resumes his opinion on Plato's logic thus: 'das Verständniss des Satzes wird uns nicht durch ihn selbst sondern durch ein Anderes gegeben; als Quelle unserer Erkenntniss der Wahrheit kann nicht der Satz sondern muss eben dies Andere gelten. Dieses Andere ist die

stylistic relations between the Sophist and the Laws. Stylistic The strangest of all objections to the authenticity of the relations. Sophist rests on a very low estimate of Plato's sincerity. It has been said that Plato would not have criticised Criticism his own theories as the author of the Sophist criticises of the the Platonic ideas. Such critics seem to measure Plato's cruder ambition according to the standard of a vulgar school- theory of master. The dialogical form of Plato's works left him ideas. a great liberty for introducing new theories, attributing them to new speakers. In the Laws many political theories of the Republic are abandoned, and thus also the Parmenides and Sophist take leave of the theory of ideas as expounded in the Phaedo or Phaedrus.

tion of the Parmenides and a fulfilment of a part of the Sophist programme there proposed. There are at least two subsepassages in which the Parmenides is alluded to in the quent later dialogue: at the beginning (217 c), where the form Parmeof the dialectical discussion of the Parmenides is mentioned in an unmistakable manner, and at a further stage, where an equally clear allusion is made to the contents of the antinomies (244 c: τῷ ταύτην τὴν ὑπόθεσιν ὑποθεμένο (τὸ ἐν είναι), πρὸς τὸ νῦν ἐρωτηθέν, καὶ πρὸς ἄλλο δὲ ὁτιοῦν, οὐ πάντων βάστον ἀποκρίνασθαι: cf. 245 Ε: καὶ ἄλλα μυρία άπεράντους ἀπορίας εκαστον είληφος φανείται τω το ον είτε δύο τινὰ εἴτε ἐν μόνον εἶναι λέγοντι 256). What Zeller Zeller's says in order to invert the relation and to place the Parme- parallels nides after the Sophist is by no means convincing. After unconthe determination of negation in the Sophist a great part vincing. of the antinomies of the Parmenides would be superfluous.

The Sophist appears to be in every respect a continua- The to the

christliche Trinitätslehre.' This touching simplicity is equalled only by Pfleiderer, who sees in the Sophist 'die Ehrenrettung des richtigverstandenen Nichtseins ' (p. 847).

as can be seen from what is said in the Parmenides about Not-Being (Parm. 142 A: τῷ μὴ ὅντι οὐδ' ὄνομα οὐδὲ λόγος

236 This passage, in which True Being appears neither as only one, nor as Two opposite, seems also to imply a plurality of Beings, or souls, as the ultimate solution of the metaphysical problem.

οὐδέ τις ἐπιστήμη οὐδὲ αἴσθησις οὐδὲ δόξα: cf. 164 B). Zeller quotes several parallel passages of both dialogues which either prove nothing about the chronological order or even confirm the priority of the *Parmenides*:

Parm. 128 E-129 c: the particulars are said to participate in ideas and even in opposite ideas, and Socrates adds: εἰ δ ἔστιν ἐν αὐτὸ τοῦτο πολλὰ ἀποδείξει, καὶ αὖ τὰ πολλὰ δὴ ἔν, τοῦτο ἤδη θαυμάσομαι.... εἰ μὲν αὐτὰ τὰ γένη τε καὶ εἴδη ἐν αὐτοῖς ἀποφαίνοι τὰναντία.

Soph. 251 A-c: the multiplicity of predicates referring to one subject is denied only by persons ὑπὸ πενίας τῆς περὶ Φρόνησιν κτήσεως τὰ τοιαῦτα τεθανμακόσι...

253 D: the dialectician distinguishes ideas and their relations.

In the above two passages the Eleatic stranger takes for granted what Socrates in the *Parmenides* represents as a great and unsettled difficulty. If any chronological inference is allowed from such general coincidences, the later date of the *Sophist* is the most probable conclusion. Other passages compared by Zeller are quite as inconclusive:

Parm. 188 C: οἶμαι ἄν καὶ σὲ καὶ ἄλλον, ὅστις αὐτήν τινα καθ' αὐτήν ἐκάστου οὐσίαν τίθεται εἶναι, ὁμολογήσαι ἄν πρῶτον μὲν μηθεμίαν αὐτῶν εἶναι ἐν ἡμῖν. πῶς γὰρ ἄν αὐτή καθ' αὐτήν ἔτι εἵη; ... ὅσαι τῶν ἰδεῶν πρὸς ἀλλήλας εἰσὶν αἵ εἰσιν, αὐταὶ πρὸς αὐτὰς τὴν οὐσίαν ἔχουσιν, ἀλλ' οὐ πρὸς τὰ παρ' ἡμῖν ὁμοιώματα.

Parm. 148 A: οὐσίας φαμὲν μετέχειν τὸ ἔν, διὸ ἔστιν . . . καὶ διὰ ταῦτα δὴ τὸ ἔν δν πολλὰ ἐφάνη. . . αὐτὸ τὸ ἔν, δ δὴ φαμεν οὐσίας μετέχειν, ἐὰν αὐτὸ τῆ διανοία μόνον καθ' αὐτὸ λάβωμεν ἄνευ τούτου οῦ φαμὲν μετέχειν, ἄρά γε ἔν μόνον φανήσεται ἢ καὶ πολλὰ τὸ αὐτὸ τοῦτο; - ἔν, οἶμαι ἔγωγε . . . Β: ἄλλο τι ἔτερον μὲν ἀνάγκη τὴν οὐσίαν αὐτοῦ εἶναι, ἔτερον δὲ αὐτό; εἴπερ μὴ οὐσία τὸ ἄν, ἀλλ' ὡς ἔν οὐσίας μετέσχεν . . . εἰ ἔτερον μὲν ἡ οὐσία, ἔτερον δὲ

Soph. 255 D: οἶμαί σε συγχωρεῖν τῶν ὅντων τὰ μὲν αὐτὰ καθ' αὐτά, τὰ δὲ πρὸς ἄλληλα ἀεὶ λέγεσθαι... τὸ δ' ἔτερον ἀεὶ πρὸς ἔτερον... εἴπερ θάτερον ἀμφοῖν μετεῖχε τοῖν εἰδοῖν ὡσπερ τὸ ὅν, ἢν ἄν ποτέ τι καὶ τῶν ἐτέρων ἔτερον οὐ πρὸς ἔτερον νῦν δὲ ἀτεχνῶς ἡμῖν ὅ τί περ ἀν ἔτερον ἢ, συμβέβηκεν ἐξ ἀνάγκης ἐτέρου τοῦτο ὅ πέρ ἐστιν εἶναι.

Soph. 244 B: ἔν πού φατε μόνον εἶναι; —φαμὲν γάρ—δν καλεῖτέ τι; —ναί—πότερον ὅπερ ἔν, ἐπὶ τῷ αὐτῷ προσχρώμενοι ὁυοῖν ὁνόμασιν, ἡ πῶς;—the answer to this question is stated to be difficult, with a very probable reference to the Parmenides, in which precisely the same question led to contradictory conclusions. The theory of communion of kinds as set forth in the Sophist may be regarded as an attempt to solve

τὸ ἔν, οῦτε τῷ ἐν τὸ ἐν τῆς οὐσίας ετερον ούτε τῷ οὐσία είναι ἡ οὐσία τοῦ ένὸς ἄλλο, ἀλλὰ τῷ έτέρῳ τε καὶ άλλφ έτερα άλλήλων.

the riddles of the Parmenides, and to progress beyond the rigid Eleatic unity of Being.

The above comparisons speak rather against Zeller's conclusions, though the chronological value of these passages is much less evident than the above quoted references to the Parmenides in the Sophist (217 c, The general contents of both dialogues are The list best explained by the priority of the Parmenides. The of cate-Parmenides prepares the ground for the theories of the gories Sophist, and is as we have seen intermediate between Theaetetus and Sophist in its list of categories as well as in its antinomies. This is confirmed also by numerous mature. stylistic observations. The vocabulary of the Sophist, Vocabudespite the difference of contents, shows such a surpris- lary. ing number of coincidences with Timaeus, Critias, and Laws, as no earlier dialogue except the Phaedrus. We have already seen what reasons account for the exceptional style of the Phaedrus, and there are many stylistic peculiarities in which the Sophist is much nearer to the Laws than the Phaedrus and Parmenides. To these Histus belongs first of all the avoidance of hiatus, which cannot avoided. be accidental, and is common to the Sophist with the five latest works. Other important peculiarities absent from the Other Parmenides, Theaetetus, Phaedrus and all earlier dialogues pecuappear for the first time in the Sophist and remain in the liarities style of all the latest works of Plato: the prevalence of καθάπερ over ὥσπερ, the very great frequency of τοίνυν, πâs, ξύμπαs, and the scarcity of μέντοι. Besides these important peculiarities, others of less importance appear for the first time in the Sophist and are common to this dialogue with the latest works of Plato: τω δύο, τάχα ἴσως, τοιγαρούν, μών ούν, μών ού, inversion of λέγεις, ξυνάπας are found repeatedly in our dialogue, and the number of accidental peculiarities of later style is much greater than in the Parmenides; thus the stylistic affinity of the

in the Sophist

of later style.

Sophist with the group of the Laws amounts to 468 units of affinity against only 243 of the Parmenides.

Zeller is singular in placing the Sophist before the Republic. Important confirmation of the later date by Hirzel and Bruns. R. Hirzel on Dialogue in Literature.

This is quite sufficient to render the later date of the Sophist as probable as anything can be in Platonic chronology, and it has been recognised since Campbell by all investigators of Plato's style, as well as by many other critics, as for instance Jowett, Tocco, Teichmüller, on independent internal grounds. Against all this evidence Zeller continues to place the Sophist before the Republic and the Symposium. This is chiefly due to the circumstance that he is evidently unaware of the existence of so many investigations on the style of Plato, and that he has not given a special attention to Plato's logical theories. On the other side the late date of the Sophist has been recently confirmed in a most decisive manner by two different lines of inquiry, which enabled two authors, who knew nothing of Campbell, to find out that in two different ways the Sophist and Politicus belong to the same group as the Timaeus and Critias. These confirmations acquire an increased importance through the fact that they touch upon our problem from a standpoint not yet applied specially to Plato. R. Hirzel 257 dedicated two volumes to a general investigation of the form of literary dialogue from Plato to the present time. This he did with remarkable acuteness, at least so far as Plato is concerned, and he made it still more evident than Ueberweg and Campbell had done that the form of the dialogue in the Sophist and the dialectical dialogues corresponds necessarily to a later stage of literary activity than that evinced in the Republic and Phaedrus. view of the special attention paid by Hirzel to the dialogical form in the literature of all ages and nations, we are bound to accept his testimony as a valuable confirmation of the results obtained by comparison of style and logical theories. Hirzel observes that the change in the

²⁵⁷ R. Hirzel, Der Dialog, ein literarhistorischer Versuch, 2 vols. Leipzig 1895.

form of the dialogue consists in many peculiarities, by which the dialectical dialogues are distinguished from earlier more poetical works. The characterisation of Less persons and of the place of conversation is less elaborate, marked and the leader of the conversation becomes the impersonal representative of abstract reason, not only without personal character but even without name in the Sophist, Politicus, and Laws. There is nothing in these dialogues Scene to remind us that they are represented as held in Attica indefinite. or even Greece: they could be imagined anywhere in the universe. Throughout these works we move in a spiritual atmosphere apart from the material world (vol. i. p. 252: Farb und gestaltlos liegt die Welt um uns, Platons Dichtergeist entzündet kein sinnliches Leben mehr in ihr. wir befinden uns in einer Geisteratmosphäre, die erhaben ist über Zeit und Raum). The connection of several Dialogues dialogues into one larger whole is also indicated by Hirzel connected as a peculiarity of Plato's latest manner, and he agrees in series. with Christ in the supposition that the term trilogy and tetralogy had been used for Platonic dialogues before it tetralogy came into use for dramatic poetry. The progress from logy. single dialogues to trilogies or tetralogies appears to Hirzel a psychological evolution similar to that which is noticeable in epic and dramatic poetry. Plato saw after the Republic the difficulty of representing very complex systematic expositions in a single dialogue, and he was also led to simplify introductory matters by the connection of dialogues in series.

These observations of Hirzel, made in a work of more general aims and not limited to Plato, deserve the most serious attention of all who still have any doubts as to the authenticity and late date of the Sophist and Politicus. They were unexpectedly confirmed in a most satisfactory manner by another author, who also referred to Plato only in connection with an investigation into another general aspect of literary composition. Ivo Bruns wrote

terisation.

'Trilogy'

the decline of
characterisation.

Greek literature, from Thucydides down to Demosthenes. This work deals also at some length with Plato as a great artist in skilful personal characterisation. Bruns found this art no longer present in the Platonic trilogies, namely in the Sophist, Politicus, Timaeus, and Critias. While in the Republic, Phaedrus, Theaetetus, and in earlier dialogues a careful characterisation of each speaker is given, and the philosophical conversation comes as if by accident, Bruns observes that in the Sophist and later dialogues the speakers are not characterised individually, except that they are spoken of as competent and well prepared for philosophical conversation. This, says Bruns, is a sign that Plato, when he wrote the dialectical works, had retired from life to the School (p. 272: der Unterschied scheint gering, ist aber in Wirklichkeit ein tiefgreifender: er bedeutet den Schrift des platonischen Dialogs von dem Leben in die Schule; er bedeutet das Aufgeben des künstlerischen Princips, mit dem der frühere platonische Dialog untrennbar verbunden ist). This is called by Bruns a new style, essentially different from the 'realistic' style of the Republic and earlier works, in which each conversation was accidental and ended naturally after a single problem had been exhausted. In the trilogies the subject of the conversation is not accidental, but well planned, and this produces the systematic connection of several works into larger wholes. The Sophist and Timaeus are only apparent continuations of earlier dialogues: really each of them begins a new trilogy, and their connection with a dialogue of the old

retired from life to the School.

Plato had

Less of realism, more of system: hence connected series.

This connection begins with the Sophist.

Neither *Republic* nor style is only employed to avoid an introductory exposition

of the circumstances in which the dialogue was started. Neither in writing the *Theaetetus* had the *Sophist* been

planned, nor in writing the Republic had Plato already

formed the plan of the Timaeus; but with the Sophist

²⁰⁸ Ivo Bruns, Das literarische Porträt der Griechen im fünften und vierten Jahrhundert vor Christi Geburt, Berlin 1896.

and Timaeus begins the plan of two trilogies. difference between the trilogies and the dialogues of the tetus old style which are supposed to be introductory to the trilogies consists, as Bruns very judiciously observes, in the great authority given to the new leaders of philosophical conversation. The stranger of Elea, who leads the dialogue in the Sophist and Politicus, is expressly recommended at the beginning of the dialogue as a remarkable philosopher (Soph. 216 A: ξένον ἄγομεν . . ἐξ 'Ελέας, έταιρου δε των άμφι Παρμενίδην και Ζήνωνα, μάλα δε άνδρα φιλόσοφον . . . C: δοκεί θεὸς μὲν . . . οὐδαμῶς είναι, θείος μήν . . . 217 Β: διακηκοέναι γέ φησιν ίκανως καὶ οὐκ άμνημονείν). Similar is also what is said in the Timaeus authority. and Critias about the special authority and preparation of the speakers. We see in all these dialogues perfect teachers, accustomed to repeat their lessons, and well prepared for what they are to say, and hearers equally prepared to receive the instruction. What Bruns says about the psychological motives of this change in Plato's later style coincides with the similar observations of Ueberweg, Campbell, and also of Hirzel, though Bruns seems not to be aware of this coincidence, or, at least, does not quote his predecessors.

His testimony, coming thus quite independently, in-Bruns' creases our confidence as to the absolute certainty of our conclusions about the date of the Sophist. This dialogue belongs evidently to Plato's old age, and is much later than the Republic and Phaedrus; it may even have been written after the third voyage to Sicily. In style and Sophist contents there is a progress beyond the Theaetetus belongs which prevents us from seeing in the Sophist an immediate already continuation of the former. The external relation between Theaetetus and Sophist is no sign of a continuity of composition, just as, in despite of a similar connection, the Timaeus is much later than the Republic.

The Theaecontemplated other dialogues to follow. The leader of the conversation is invested with far more

> testimony evidently independent. The to Plato's old age.

II. The Politicus.

Continuation of the Sophist.

The Politicus is a genuine continuation of the Sophist much more than the Sophist can be esteemed as a continuation of the Theaetetus. Here we have a close and mutual connection: in the Sophist (217 A) the Politicus is announced, and in the Politicus the Sophist is expressly quoted (257 A, 266 D, 284 B, 286 B). This close literary connection of the two companion

dialogues corresponds to the near relation of their con-The scientific method is here equally tents and method. praised as leading to truth against every prejudice, and neglecting nothing, however insignificant it may appear (266 D: τη τοιάδε μεθόδω των λόγων ούτε σεμνοτέρου μάλλον έμέλησεν ή μή, τόν τε σμικρότερον οὐδὲν ήτίμακε πρὸ τοῦ μείζονος, ἀεὶ δὲ καθ' αύτην περαίνει τάληθέστατον). method consists here, as in the Sophist, in the classification of particulars according to their natural kinds (286 D: ό λόγος παραγγέλλει πολύ μάλιστα καὶ πρώτον τὴν μέθοδον αὐτὴν τιμᾶν τοῦ κατ' εἴδη δυνατὸν εἶναι διαιρεῖν). of logical exercise is to become better prepared for more difficult problems, and the impatient pupils are warned that the way may be long or short according to the subject (286 E: λόγον, ἄν τε παμμήκης λεχθείς τὸν ἀκούσαντα εύρετικώτερον άπεργάζηται, τοῦτον σπουδάζειν καὶ τῷ μήκει μηδὲν ἀγανακτεῖν, Defence of αν τ' αν βραχύτερος, ώσαύτως). It seems that the form of the Sophist had been criticised as too lengthy, and as winding arguments around the subject with which it deals. Plato answers here that such critics ought to have shown how the same results could have been reached by a shorter way, and whether the shorter way would have been equally useful for the purpose of developing dialectical power (287 A). This is clearly a polemic reference, and if in a contemporary writing we could discover some censure of the Sophist of Plato, the relation between this writing and the Politicus would be established beyond every doubt. Unluckily, no

such writing seems to be known—at least, Teichmüller and Dümmler, who believe themselves to have found so many other 'literary feuds,' have made no use of this interesting passage.

The ideal of logical training occupies Plato's mind Illustrawith increasing fascination, and he insists on its im-tion from portance at every step. He quotes manifold instances of the way in which higher aims are furthered by elementary exercise. One who learns reading, and is asked of what letters a word consists, does not aim only at answering that particular question, but at becoming more proficient in grammar (285 c). Thus also the investigation of the nature of the statesman is only a lesson in dialectic For the aim of life is to become Know. (285 D, cf. Soph. 227 B). better and wiser by means of science and justice (293 D). ledge of True and well-founded opinions on these things are divine, and to be seen only in divine souls (309 c: τὴν τῶν καλῶν καὶ δικαίων πέρι καὶ ἀγαθῶν καὶ τῶν τούτοις ἐναντίων ὄντως οὖσαν ἀληθη δόξαν μετὰ βεβαιώσεως, ὁπόταν ἐν ψυγαῖς έγγίγνηται, θείαν φημί εν δαιμονίφ γίγνεσθαι γένει). greatest happiness is knowledge (272 B), and Plato invents here a new word never used before him to signify the treasury of human knowledge (272 c: συναγυρμός φρονήσεως) as an ideal totality of individual endeavours, eternally increasing and transmitted from generation to generation. Such a conception he could not have had when he wrote the Socratic dialogues, and it is really difficult to understand how so many distinguished Platonists could believe in an early date of the Politicus. The use of δύναμις mark of alone in this passage is a sufficient sign that the Politicus lateness. is written after the Republic, and many other signs are here available for the determination of this relation between the two dialogues. Here even the notion of desire is subtilised to such a height that it is applied to logical training (272 D: τὰς ἐπιθυμίας περί τε ἐπιστημῶν καὶ τῆς τῶν λόγων γρείας). The chief instrument of this training is the same here as at an earlier stage, the power

learning to read.

truth and justice is the ultimate aim. Comprehensiveness of knowledge as now conceived. Maturity of this conception a

to ask and answer questions (286 A: δεῖ μελετᾶν λόγον έκάστου δυνατον είναι δούναι καὶ δέξασθαι, cf. Phaedo 76 B, Crat. 426 A, &c.).

Simidifference again.

The notion of similarity and difference retains the imlarity and portance which it acquired in the Parmenides. dialectician is asked first to find out all the differences in a group of things, and then to discern all common peculiarities which unite them into various logical units (285 B).

Scientific construction

Each science is built up by a skilful selection of appropriate elements, and the right union of similar particulars into one, while useless observations and notions are rejected (308 C: πασα ἐπιστήμη πανταχοῦ τὰ μὲν μοχθηρὰ εἰς δύναμιν άποβάλλει, τὰ δ' ἐπιτήδεια καὶ χρηστὰ ἔλαβεν, ἐκ τούτων δὲ

Reality only attained by reason. μίαν τινὰ δύναμιν καὶ ίδέαν δημιουργεί, cf. Crat. 438 E). For this an exact definition of each notion is required, based on reasoning not on sense perception (277 c: γραφής δε και συμπάσης χειρουργίας λέξει και λόγφ δηλοῦν παν ζώον μαλλον πρέπει τοις δυναμένοις έπεσθαι). Νο figure or drawing can correspond to the true substance of

καὶ όμοίων καὶ ἀνομοίων ὄντων, πάντα είς εν αὐτὰ ξυνάγουσα,

things, which is conceived only by pure reason (286 A: τοις δ' αὐ μεγίστοις οὐσι καὶ τιμιωτάτοις οὐκ ἔστιν εἴδωλον οὐδὲν πρὸς τοὺς ἀνθρώπους εἰργασμένον ἐναργῶς, οὖ δειχθέντος την του πυνθανομένου ψυχην ο βουλόμενος αποπληρώσαι, προς των αισθήσεων τινα προσαρμόττων, ίκανως πληρώσει). This relation of truth to reason is here insisted upon (286 Α: τὰ γὰρ ἀσώματα, κάλλιστα ὅντα καὶ μέγιστα, λόγω μόνον, άλλω δε οὐδενὶ σαφώς δείκνυται, cf. Phaedo 65 D).

The ideas must be understood independently of the use of

language and without attaching any exceptional import-

ance to words (261 Ε: καν διαφυλάξης τὸ μη σπουδάζειν

έπὶ τοις ονόμασι, πλουσιώτερος είς τὸ γήρας αναφανήσει

True conceptions independent of SATISA and of language.

φρονήσεως, cf. Crat. 439 A). The greatest differences of opinion, which divide men into opposite camps, refer to moral convictions, and the philosopher appears here possessed with that Platonic absolutism which in a later age produced the Christian

Platonic absolutism.

Inquisition. Such an intolerance is a distinct peculiarity the source of Plato's later years, and distinguishes the Laws from of later the Republic, forming at the same time a link between the Politicus and the Laws. That ethical questions divide men more than purely theoretical discussion was assumed already in the Socratic dialogues, but here it is asserted with much greater strength:

Christian Inquisition.

Euthyphro 7 C: περὶ τίνος δὲ δή διενεχθέντες και έπι τίνα κρίσιν ού δυνάμενοι άφικέσθαι έχθροί γε αν αλλήλοις είμεν και δργιζοίμεθα; . . . σκόπει εἰ τάδε ἐστὶ τό τε δίκαιον καὶ τὸ ἄδικον καὶ καλὸν καὶ αίσχρὸν καὶ ἀγαθὸν καὶ κακόν.

Crito 49 D: οίδα . . . ὅτι ὀλίγοις τισί ταῦτα καὶ δοκεῖ καὶ δόξει · οἶς οὖν οῧτω δέδοκται καὶ οἶς μή, τούτοις ούκ έστι κοινή βουλή, άλλα ανάγκη τούτους άλλήλων καταφρονείν, όρωντας τὰ ἀλλήλων βουλεύματα.

Polit. 308 Ε: ή βασιλική . . . τούς μη δυναμένους κοινωνείν ήθους ανδρείου καὶ σώφρονος όσα τε άλλα έστὶ τείνοντα πρὸς ἀρετήν, ἀλλ' εἰς άθεότητα καὶ ὕβριν καὶ άδικίαν ὑπὸ κακής βία φύσεως απωθουμένους, θανάτοις τε ἐκβάλλει καὶ Φυγαῖς καὶ ταῖς μεγίσταις κολάζουσα ἀτιμίαις. Cf. Legg. 909 A: where those who disagree with the lawgiver on religious matters are condemned to death.

Thus we see that Plato admitted the impossibility of proof in moral questions, otherwise he had no reason to propose the penalty of death for moral dissenters, and specially for atheism. He recognised here a power of individual nature, resisting the charm even of the highest philosophical rhetoric, which produces conviction only in purely theoretical matters of science, not in practical tendencies of life.

The unity of universal science, already affirmed in the Division Sophist (257 c), is here taken for granted, and a division of uniof the whole is attempted into theoretical and practical, or pure and applied science (258 Ε: ταύτη τοίνυν συμπάσας ἐπιστήμας διαίρει, τὴν μὲν πρακτικὴν προσειπών, τὴν δὲ μόνον γνωστικήν - έστω σοι ταῦθ' ὡς μιᾶς ἐπιστήμης τῆς ὅλης είδη δύο). Pure science is again divided into critical and epitactic, of which the former teaches what is, and the and latter what ought to be (260 B: κρίσει δε καὶ ἐπιτάξει epitactic. διαφέρετον άλλήλοιν τούτω τὸ γένεε; συμπάσης της γνωστικής τὸ μὲν ἐπιτακτικὸν μέρος, τὸ δὲ κριτικὸν . . .). Το the

versal science into pure and applied.

epitactic sciences belong not only ethics and politics but

Even casual observations here take a scientific form.

Productions classified.

Rules of classification. Dichotomy preferred, but natural units always to be preserved. also all practical pursuits which require helpers to execute the leader's instructions, as, for instance, the art of architecture. The further subdivisions are only playful, and cannot be taken seriously as a permanent contribution to the classification of sciences.²⁵⁹ Also other samples of classification given at some length in the Politicus, as, for instance, the classification of living beings (262-267), have no permanent value, and offer only an opportunity for the application of logical rules. For instance, Plato criticises the division of men into Hellenes and Barbarians (262 D), and compares it with a division of all numbers into ten thousand and other numbers than ten thousand. For the purpose of showing his independence of every prejudice he finds a similarity between swine and men, so much that both kinds of animals are distinguished only by the number of their feet, man being a gregarious tame hornless animal walking on earth by the power of two divided feet, while the swine use twice that number, thus appearing to have even an advantage over men (266 c). Such a fanciful definition is meant as a protest against the undeserved exaltation of vulgar mankind over other animals. Also the subdivision of productions and possessions (279 D) is mainly an example by which the rules of classification are illustrated. These rules were then first expressed by Plato, and appeared to his mind as very important logical laws. The subdivisions ought to be nearly equal to each other, and form natural units, not artificial parts (262 AB: μὴ σμικρὸν μόριον ἐν πρὸς μεγάλα καὶ πολλά ἀφαιρώμεν, μηδὲ εἴδους χωρίς ἀλλά τὸ μέρος ἄμα είδος εχέτω . . . διὰ μέσων δε ἀσφαλέστερον ιέναι τέμνοντας). Ideas, as here conceived, are to be found by classification of notions, or are ideal notions in the same meaning as

²³⁹ The various classifications of the *Politicus* have been specially represented by Lukas (*Methode der Einthéilung*), and also recently by C. Ritter (*Platos Politicus: Beiträge zu seiner Erklärung*, Programm des Gymnasiums zu Ellwangen 1896).

the ideas were for Leibniz or Kant. Any attentive reader of the dialectical dialogues will at once observe that in this and similar passages eldos and idéa are identical in meaning, and that they cannot mean transcendental beings, but natural kinds or ideas in the same sense as the term is used in modern philosophy, that is, perfect and universal notions of the human or any higher mind. A notion as first formed might be imperfect and subjective. As soon as by dialectical thought it attains perfection and objectivity, it deserves the name of an idea. Objectivity is not separate existence outside any mind, but uniform existence in all possible souls.

The separate existence of ideas outside any mind is Objeca poetical absurdity which could subsist only for a very tivity at limited time in the imagination of a thinker like Plato, first misand which has never been expressly affirmed in clear underwords by him-because the poetical metaphors of the Phaedrus, Republic, Phaedo and Symposium cannot be taken as literal expressions of abstract truth. They only supply an indication that Plato, when he first discovered the objectivity of notions, hesitated how to explain this objectivity and felt some inclination to a worship of ideas in an ideal world, whence they could influence our im- The experfect minds. This conception may have been developed aggeration by his pupils to such extremes that he undertook to demonstrate its absurdity in the Parmenides. Since that time he continues to use the terms elos and idéa, but no undelonger suggests the separate existence of abstractions, ceived as this would contradict the increasing importance him. attached to the priority of soul in the universe.

The ideas can only exist in a soul, as has been clearly said in the Sophist: they are notions, but not every notion is an idea. The idea is a notion of a perfect soul, free The idea from error, and we must carefully distinguish among is a notion our own notions the ideas from other imperfect notions. This is the only consistent interpretation of later Platonic logic, and might be confirmed by a long enumeration of

of Plato's followers may have

of a perfect soul. C. Ritter's examination of Dassages in the Politicus. showsthat none of them imply the current ' doctrine of ideas.'

view.

This throws the burden of proof on those who maintain the older

> cation become useless if we understand 'ideas' to mean anything else than this. One of these rules compares the division of an idea with the cutting into parts of a sacrificial animal, and recommends dichotomy as the best way of division, leaving open the recourse to a partition in three or more parts only when for some reason dichotomy is impossible (287 c: κατά μέλη τοίνυν αὐτὰς οίον ίερεῖον

the passages in the six latest dialogues where ellos, idéa, γένος, μέρος, μόριον, τμημα, φύσις, δύναμις occur. full enumeration, however, with a sufficient interpretation of each passage, exceeds the limits of the present But C. Ritter in his very interesting programme on the Politicus 259 enumerates the corresponding passages of this dialogue and arrives at the conclusion that not one of these passages confirms the 'herkömmliche, durch Aristoteles eingeführte Auffassung der platonischen This is also Campbell's opinion in his Introductions to the Sophist and Politicus. Here it will be sufficient to re-assert as the result of a careful reading of the six last works of Plato the conviction that the philosopher at this stage of his thought no longer admitted the conception of ideas as existing outside every soul. If anybody sustains the opposite view, he must always recur to the very improbable hypothesis that the second part of the Parmenides is a refutation of the objections raised in the first part, and to the serious blunder of interpreting παντελώς ὄν in the Sophist (249 A) as ideas, possessing each of them soul, life, movement, and reason. Even this absurdity is insufficient to prove the separate existence of ideas in later Platonism: we challenge our readers and critics to point out in works written after the Parmenides a single passage supporting the assumption that ideas exist outside every soul, or contradicting our view that ideas are perfect notions of a perfect Being. natural kinds of particular things in agreement with the thoughts and aims of their Creator. All the rules given for the finding of ideas by classifi-

Logical division compared to the breaking up of a

διαιρώμεθα, ἐπειδὴ δίχα ἀδυνατοῦμεν. δεῖ γὰρ εἰς τὸν ἐγγύτατα ὅ τι μάλιστα τέμνειν ἀριθμὸν ἀεί). In these divisions the parts should be always natural kinds (263 A: yévos αμα καὶ μέρος ευρίσκειν . . . 262 Ε: μαλλον κατ' εἴδη καὶ δίχα . . . 285 Α: κατ' εἴδη συνειθίσθαι σκοπεῖν διαιρουμένους . . . 285 Β: διαφοράς όπόσαιπερ εν είδεσι κείνται 262 B : τὸ μέρος ἄμα είδος ἐγέτω, &c.). Constantly ellos and ibéa are used in the same meaning as yévos, coinciding with the conception of parts of a class of objects. This process of classification enables us to find the principles or elements of Being, unknown to those who cannot recognise the essential identity of things apparently different, but really belonging to the same class (278 c D).

differently

In order to attain a greater dialectical power, it is necessary to recur to exercise on familiar examples and to observe the analogies between such examples and the from highest metaphysical problems (277 D: γαλεπὸν μὴ παραδείγμασι χρώμενον ίκανῶς ἐνδείκνυσθαι τι τῶν μειζόνων. κινδυνεύει γαρ ημών έκαστος οίον όναρ είδως απαντα πάντ' αὖ πάλιν ὥσπερ ὕπαρ ἀγνοεῖν). Sometimes we believe ourselves to have seen things distinctly in dreams, while we are unable to describe them after we are awake. Thus untrained people often are unable to distinguish notions which on other occasions they had distinguished. We are best led to the knowledge of truth by the skilful selection of convenient examples which bring us gradually nearer to the aim of our inquiry. Plato applies this rule Example immediately by giving an example of the use of example of (277 D: παραδείγματος καὶ τὸ παράδειγμα αὐτὸ δεδέηκεν example. . . . 278 E). Children when they learn reading recognise a letter more easily in short than in long and difficult They will learn with the greatest facility if they are first shown short and easy syllables, as examples of the use of letters which recur in long and difficult syllables. Then they will without effort develope their faculty of recognising the same letter wherever they see

Complexity of nature and of Life compared with the variety of words and phrases.

it, be it in a short or long syllable, as they will notice that each letter remains identical in all the combinations it enters into with other letters, so that it is sufficient to know well the small number of existing letters in order to be able to read the most difficult words and phrases in their innumerable combinations (277 E-278 c). Though Plato had already in his earlier works made use of examples and recommended them (Phaedr. 262 c: Ψιλώς πως λέγομεν, οὐκ ἔχοντες ίκανὰ παραδεύγματα, cf. Soph. 218 D: περί τινος των φαύλων μετίοντες πειραθώμεν παράδειγμα αὐτὸ θέσθαι τοῦ μείζονος), he had never given such direct attention to the theory of analogy as he has done here.

The use of an example has the purpose of inducing a pupil to recognise an idea in a less familiar application, by comparing it with a familiar instance of the same idea (278 c: τοῦτο . . ίκανῶς συνειλήφαμεν, ὅτι παραδείγματός γ' έστι τότε γένεσις, όπόταν ον ταὐτον έν έτέρφ διεσπασμένφ δοξαζόμενον όρθως καὶ συναχθεν περὶ εκάτερον ώς συνάμφω μίαν άληθη δόξαν ἀποτελή). It is very characteristic that this practice is here represented as leading in the first place to true opinion, not to absolute knowledge, which cannot rest on mere analogy. use of examples in the Politicus is very frequent: thus for instance the long explanation of the art of weaving is an example which is given only for the purpose of explaining the political art (287 B). The politician is also compared to a physician who prescribes drugs according to the state of the patient and changes them when he finds it convenient. Thus also the true politician will change the laws if new experience requires it (295 c-296 A. Cf. Legg. 769 D).

The weaver compared with the politician. Example of the physician.

The political opportunism here proposed agrees well with the Laws, and is very different from the absolutism of the Republic, and for this reason alone it would be impossible to admit that the Republic could have been written between the Politicus and Laws, as Zeller supposes. A very remarkable example is given to illustrate from an

Opportunism as in the T.cans. Illustration

the incompetence of the majority in political affairs. Supposing that the rules of medicine and navigation were entrusted not to physicians and seamen, but to a majority of citizens, the consequences of this arrangement would certainly be disastrous for all. Not less disastrous are the consequences of the political power of a blind majority (298-299, 300 Ε: ωμολογημένον ήμιν κείται μηδέν πλήθος μηδ' ήντινοῦν δυνατὸν είναι λαβεῖν τέχνην).

In the Politicus even more than in the Sophist, the idea of method acquires a prevailing power over the mind of Plato. At every step reflections on thought arise, thus giving to everything a logical aspect, and showing a tendency to an impartial consideration of all the conditions of each branch of knowledge. For instance we find here a digression on the difference between absolute and relative measure (283 Ε: διττάς . . οὐσίας καὶ κρίσεις τοῦ μεγάλου καὶ τοῦ σμικροῦ θετέον . . . τὴν μὲν πρὸς μέτριον. ἄλληλα...την δ' αὖ πρὸς τὸ μέτριον). We judge about quantities by comparing them either with each other or with an absolute standard of what ought to be, in thought or action (283 E). The absolute standard named τὸ μέτριον is the principle of every art and also of politics and morality (284 A). This absolute standard (284 E: πρὸς τὸ μέτριον καὶ τὸ πρέπον καὶ τὸν καιρὸν καὶ τὸ δέον καὶ πάνθ' όπόσα είς τὸ μέσον ἀπφκίσθη τῶν ἐσχάτων) is equally distant from two extremes and is here indicated as an important new discovery (284 D: δεήσει τοῦ νῦν λεχθέντος προς την περί αυτό τάκριβες άπόδειξιν . . . ήγητέον όμοίως τας τέγνας πάσας είναι και μείζον τι αμα και έλαττον μετρείσθαι μή πρὸς ἄλληλα μόνον ἀλλὰ καὶ πρὸς τὴν τοῦ μετρίου γένεσιν). Only those who are not accustomed to dialectical distinction are unable to see the difference between absolute and relative measure (285 A). theory, later applied by Aristotle in his Ethics, is here repeated several times with great insistence, and is evidently felt to be expressed for the first time (285 c: ψυλάττωμεν δὲ μόνον, ὅτι δύο γένη ἐξεύρηται τῆς μετρητικῆς). It corre-

imagined rule of the majority in medicine and navigation.

Increasing prevalence of the idea of method. Measure. absolute and relative: τὸ

To be compared with Aristotle's μεσότης.

sponds very well to the new conception of ideas and could not easily apply to the primitive transcendental ideas, which were out of relation with particular extremes.

Causes and conditions. Another logical distinction, which had been already prepared in the *Phaedo*, is here developed as it were casually in the progress of the inquiry:

altıa and Euvaltıa.

Phaedo 99 A: αἴτια τὰ τοιαῦτα (the physical conditions) καλείν λίαν ἄτοπον · εἰ δέ τις λέγοι ὅτι άνευ τοῦ τὰ τοιαῦτα έχειν, καὶ όστα και νεύρα και όσα άλλα έχω, οὐκ ἄν οἶός τ' ἦν ποιεῖν τὰ δόξαντά μοι, άληθη αν λέγοι ώς μέντοι διά ταθτα ποιώ άποιώ καὶ ταθτα νώ πράττων, άλλ' οὐ τῆ τοῦ βελτίστου αίρέσει, πολλή καὶ μακρά δαθυμία αν είη τοῦ λόγου. Β: τὸ γὰρ μὴ διελέσθαι οδόν τ' είναι ὅτι ἄλλο μέν τί έστι τὸ αἴτιον τῶ ὄντι, ἄλλο δὲ έκεινο άνευ οδ τὸ αἴτιον οὐκ άν ποτ' εῖη αῖτιον · δ δή μοι φαίνονται ψηλαφώντες οἱ πολλοὶ ώσπερ ἐν σκότει, άλλοτρίφ δνόματι προσχρώμενοι, ώς αίτιον αὐτὸ προσαγορεύειν.

Polit. 281 c: the production of the weaver's tools is designated συναιτία of the art of weaving. This term has been used only once before, according to Ast, in Gorg. 519 Β: οὐκ αἰτίων ὄντων τῶν κακών άλλ' ἴσως συναιτίων. use of the word is similar to that in Aeschylos and Isocrates. A more technical use of the same term is found Polit. 281 p: δύο τέχνας οῦσας περὶ πάντα τὰ δρώμενα, . . τὴν μὲν τῆς γενέσεως οὖσαν Ευναίτιον, την δ' αὐτην αἰτίαν . . . δσαι . . . δργανα παρασκευάζουσιν . . . ταύτας μέν ξυναιτίους, τάς δέ αὐτὸ τὸ πρᾶγμα ἀπεργαζομένας αἰτίας . . .

cf. 287 Β: ξυναιτίων καὶ τῶν αἰτίων.

287 D: ὅσαι γὰρ σμικρὸν ἣ μέγα τι δημιουργοῦσι κατὰ πόλιν ὄργανον, θετέον ἀπάσας ταύτας ὡς οὕσας συναιτίους. ἄνευ γὰρ το ὑτων οὐκ ἄν ποτε γένοιτο πόλις οὐδὲ πολιτική, τούτων δ' αὄ βασιλικῆς ἔργον τέχνης οὐδέν που θήσομεν.

Cf. Tim. 46 D: δοξάζεται ὑπὸ τῶν πλείστων οὐ ξυναίτια ἀλλ' αἴτια εἶναι τῶν πάντων (namely material causes as compared with final causes). In the same meaning 76 D: τὸ . . . δέρμα, τοῖς μὲν ξυναιτίοις τούτοις δημιουργηθέν, τῆ δὲ αἰτιωτάτη διανοία τῶν ἔπειτα ἐσομένων ἔνεκα εἰργασμένον.

Final and efficient causes.

We see that the distinction between final and efficient cause, which remained the same from the *Phaedo* to the *Timaeus*, acquired its proper terminology only in the *Politicus*. What in the *Phaedo* is called 'ἐκεῖνο ἄνευ οὖ τὸ αἴτιον οὖκ ἄν ποτ' εἴη αἴτιον ' becomes in the *Politicus* ξυναίτιον and is again designated by this term in the *Timaeus*. The special application of the term in the

Politicus changes nothing in its general meaning, and the word Euvaltion is a peculiarity of later style, limited to Politicus, Timaeus, Laws in its technical use, while it is used only once in an earlier dialogue in the earlier meaning, taken from tragic poetry. It will be difficult for Fresh the believers in the Megaric period to explain why Plato proof should use in the Phaedo a lengthy circumlocution if he had already introduced a short and convenient term with the same meaning. For us it is quite clear that Phaedo. ξυναίτιον as a metaphysical term was not yet in Platonic use when he wrote the Phaedo, as can be seen by the comparison of the above passages. Another interesting reference to earlier theories is here found in the familiar mention of the soul as the first principle of movement, which could scarcely be understood in the form in which it occurs here, if the demonstration of the Phaedrus were Demonnot presupposed (269 Ε: αὐτὸ δὲ ἐαυτὸ στρέφειν ἀεὶ σχεδὸν stration οὐδενὶ δυνατον πλην τῷ τῶν κινουμένων αὖ πάντων of the ἡγουμένφ). In connection with the cyclic revolutions of Phaedrus the heaven Plato speaks here again of immense periods of time, which he never had mentioned nor imagined Illimit. before the Republic. The universe is supposed to be able subject to periodical revolutions which last millions of periods years 260 (270 A: ἀνάπαλιν πορεύεσθαι πολλάς περιόδων μυριάδας).

of the priority of the

also presupposed. of time.

schmidt

If we look at the logical character of the Politicus Biting and at the biting humour displayed in this dialogue as humour in few other works of Plato, it appears incredible that of the critics were found who doubted the authenticity of this dialogue. What Socher (1820) and Suckow (1855) said in favour of such doubts has been repeatedly refuted by Grote, Campbell and Jowett. But Schaarschmidt's plea Objections for the spuriousness of the Politicus seems not yet to of Schaar-

200 The meaning of meplodos is not quite certain; Campbell translates 'days,' but in view of the similar passages of Theaetetus and Phaedrus and of the astronomical studies which appear to have occupied Plato in his later years, it is quite as probable that he meant years, each year being the smallest period in which the heaven returns to the same relative position.

to the authenticity of this dialogue easily refuted. have been specially considered, though nearly all competent authorities recognise the authenticity of this dialogue as established beyond every doubt. It may not be superfluous to consider these arguments, as Schaarschmidt, living still, has not found it necessary to revoke them in the course of thirty years, and as he has followers among quite recent historians of philosophy.²⁶¹ Schaarschmidt thinks that such tedious divisions of notions as are found in the Politicus are unworthy of Plato. If we remember that divisions of notions have been recommended in the Phaedrus, and very much used in the Republic, there is no reason whatever to doubt that Plato at a later period of his literary activity gave a special attention to this logical exercise. What Schaarschmidt says about the use of example and analogy as contrary to Plato's custom is equally contradicted by the Phaedrus (262 c D), where examples are as strongly recommended as in the Politicus. The myth of the Politicus, like the myth of the Phaedrus, is used to help the progress of the philosophical argument, and Schaarschmidt has no right on this account to doubt the authenticity of the Politicus if he admits, as he does, the authenticity of the The difference between the myth in the Phaedrus.Politicus (271 D-274 E) and a short mention of the same legend in the Laws (713 CDE) has further excited Schaarschmidt's suspicion. But Plato never attempted a painful identity of myths, and anybody can see how freely his imagination worked in the different versions of the eschatological myths.

Schaarschmidt contradicts himself, because he holds

⁸⁶¹ W. Windelband, Geschichte der alten Philosophie, 2° Aufl. München 1894, p. 114, says: 'es ist nicht wahrscheinlich, dass der Philosoph neben der Republik denselben Gegenstand in einem andern Werke behandelt heben sollte, zumal da das letztere in wichtigen Punkten erheblich andere Lehren aufstellt.' In France Huit ('Etudes zur le politique attribué Platon,' in Séances et travaux de l'Académie des sciences morales et politiques, vol. 128, p. 569; vol. 129, p. 169, Paris 1887) popularised Schaarschmidt's views. On the relation between Rep. and Polit. see Nusser's article, in Philologus for 1894, vol. liii. pp. 13-37.

every difference between two dialogues to be a reason for suspicion, while on the other hand every similarity also appears to him as an indication of the work of an imitator. Thus he wonders why in the Politicus an ideal ruler is placed above the laws. He forgets that here, as in the Relation Laws, the ideal is already admitted to be almost impossible to the to realise, and the idea of a second best state based on fixed Laws. laws, here introduced (297 E), is later developed in the Laws. On the other side, the view of a state without fixed laws is already prepared in the Republic (425 D: οὐκ ἄξιον ανδράσι καλοις καναθοις επιτάττειν), as also the comparison of politics and medicine (Rep. 426 A, cf. Polit. 298 A-300 D). The usefulness of laws is fully recognised in the Politicus in the case when a perfect ruler cannot be found. Ordinary governments do best to keep the law (301 A). The same doctrine occurs in the Laws, only there it is recognised as impossible that an ideal ruler should be born on this imperfect earth, so that the laws acquire an increased importance, though the notion of an ideal state is not altogether abandoned, except for transient practical reasons (Legg. 739 D: ή μεν τοιαύτη πόλις (as proposed in the Republic), είτε που θεοί ή παίδες θεών αὐτὴν οἰκοῦσι πλείους ένός, ουτω διαζώντες ευφραινόμενοι κατοικούσι, cf. 746 AB). In the Politicus as in the Laws (874 E: νόμους άνθρώποις άναγκαῖον τίθεσθαι καλ ζην κατά νόμους, η μηδεν διαφέρειν τῶν πάντη ἀγριωτάτων θηρίων) the fixed rules become necessary only in consequence of human ignorance and imperfection. This conviction led Plato equally in the Politicus as in the Laws (684 BC) to recommend coercion in order to maintain the fixed legislation.

In political theories it becomes especially evident that the Politicus is intermediate between Republic and Laws, so that there is no reason to raise any suspicion from that standpoint against the authenticity of our dialogue. Schaarschmidt wonders why the ideal ruler in the Politicus is not a philosopher as in the Republic, and thinks that this ideal ruler has no other aim than to satisfy the personal needs and aspirations of the governed. This by no means agrees with what we really read in the Politicus. Politics is here counted among the theoretical sciences (259 D) opposed to the practical arts, and the politician's aim is to produce divine and true opinions about justice in his subjects (309 c, cf. 293 D). It is very natural that only opinions are to be expected in the blind majority of men. Knowledge is also in the Republic a privilege of the rulers.

Supposed silence of Aristotle.

Schaarschmidt's inferences from the silence of Aristotle about the differences between the Politicus and Laws are sufficiently refuted if we consider the accidental nature of all allusions to Platonic dialogues in the works of Aristotle. There was no necessity for him expressly to quote the Politicus, and we must not apply our standard of literary erudition to Aristotle. His works have come to us in a state which does not guarantee that we possess all the quotations he might have made from Plato's works. And the quotations preserved could in most cases be omitted without any prejudice to the argument of the passages where they The Politicus is not, as its title might suggest, a political treatise, and therefore there was no opportunity to quote it in Aristotle's Politics, where the Republic and Laws are dealt with. Here we find more logical than political theories, and the definition of the statesman or politician is only a pretext for many digressions on the method of scientific investigation generally, as can Denied by be seen from the above exposition. Ueberweg has suffi-Ueberweg, ciently proved that the Sophist and Politicus were known to Aristotle, and although he afterwards believed that some pupil of Plato might have written these dialogues, the references he collected show clearly that Aristotle knew them. It is difficult to admit that Aristotle would have named a pupil of Plato an 'earlier writer.' This, as the name is not specified, refers to Plato with greater probability than to anybody else. Bonitz quotes thirteen references to the Politicus of Plato in the works of

and shown to be untenable by Bonitz.

Aristotle (Index Aristotelicus, p. 598). The feeblest of all Schaarschmidt's arguments against the authenticity of the Politicus is based on a misconception of Plato's style. He did not know stylistic peculiarities as they are known now, and was therefore entirely unaware of the fact that the Politicus is as near in style to the Laws as the Timaeus, and this despite the great difference of contents.

the authenticity of the Politicus has been advanced, for arguments what Huit says on the subject demonstrates only the strange ignorance of this author. He is, for instance, astonished that the title is not a proper name, as if he had never heard of the Banquet, Republic, Laws, which he still holds to be authentic. He complains of the absence of well-characterised persons, which is common to the Politicus with all later works. He objects to the person of the younger Socrates as unplatonic, and he does not notice that the individual characterisation of all persons in later dialogues is equally deficient. He wonders why the Politicus has been so little quoted by later authors, and asserts that only Proclus, Plotinus, Plutarch, Theodoretus, and Simplicius quoted it, while Fischer in his edition (1774) without attempting completeness of enumeration gives a list of a dozen classical authors who had read this dialogue. Such tests are generally of little value, because most of these quotations are accidental. But it is quite unjustifiable to ask for better authorities than Proclus and Plotinus when corroborating Aristotle as to the authenticity of a Platonic dialogue. Huit also

The only argument of Huit which might claim some importance is based on a misinterpretation of texts. thinks that Plato in this dialogue does not distinguish δόξα from ἐπιστήμη. If this were true, we should have reason

to, and in the Critias the Timaeus.

professes indignation over the fact that in the Politicus the Sophist is quoted, and he seems to be unaware that in the Timaeus and Laws the Republic is clearly referred

After Schaarschmidt no really new argument against Huit's feebler. to consider it seriously, because the above distinction is fundamental in Platonic philosophy. But really, as has been shown above, Plato speaks of $\delta \delta \xi a \iota$ as mere opinions, not as knowledge, as it cannot be expected from all common citizens that they should rise to the level of knowledge, and the ideal ruler must be satisfied if he is able to produce in their minds true opinions.

All these arguments of Schaarschmidt and Huit prove nothing, and the authenticity of the *Politicus* is established beyond reasonable doubt by the similarity of its style to the latest works of Plato. Until somebody can show in a work written by another author two hundred and forty stylistic peculiarities recurring in the *Laws*, we must accept the *Politicus* as authentic. It is a work of rare literary and logical excellence, and could not easily be written by anybody else than the author of the *Phaedrus*.

As to the date of the *Politicus*, it is certain that this dialogue must have been written after the *Sophist*. This, taken together with the order of the preceding works, gives to the *Politicus* a place among the productions of Plato's old age, in so far as only the *Timaeus*, *Critias*, and *Laws* are distinctly later. It remains difficult to decide whether the *Philebus* followed or preceded the *Politicus*. Hirzel ²⁶² has already clearly demonstrated that the *Politicus* is very nearly related to the *Laws*.

III. The Philebus.

This dialogue is one of the most important writings Importnot only of Plato but of ancient philosophy in general. ance of the Philebus. Yet it has not escaped unjustifiable suspicions as to its authenticity. Schaarschmidt's attempts in this respect Schaarhave been already refuted by Tocco, and even his faithful schmidt's doubts follower Huit feels obliged to dissent in this point from refuted his master. It is delightful to read this refutation of by Huit. Schaarschmidt by Huit (vol. ii. pp. 171-181), because

²⁶² Hirzel, 'Zu Platons Politicus,' in vol. vii. p. 127 of Hermes for 1874.

nearly every word of it applies equally to the Sophist and Politicus, while Huit is very careful to produce all arguments of Schaarschmidt as his own when he triumphantly asserts 263 the spuriousness of the Parmenides, Sophist, and Politicus. We have limited our previous discussion on authenticity to the Politicus, because the authenticity of the Politicus implies necessarily the authenticity of the Sophist and also of the Parmenides. Here it may not be superfluous to say something about a more recent attempt, undertaken by F. Horn,²⁶⁴ to strike the Philebus out of the list of Plato's writings. It is significant that Horn does not deny Aristotle's testimony in favour of the Platonic origin of the Philebus. Hence he is obliged to recur to the strange supposition that Aristotle could be mistaken in such a question as the authenticity of a Platonic dialogue, whereby the whole of Ueberweg's investigation on the authenticity Plato's of Platonic dialogues is brought into question. this point only Horn seems to be unaware of the method which alone can lead to valid conclusions in such matters. He reasons continually thus: some arguments of the Philebus do not agree with enunciations on the same

Objections of Horn, in spite of Aristotle's testimony. later views notalways consistent with earlier statements.

²⁶³ A curious proof of the incomparable ingenuousness of that French author, whom, by a regrettable mistake, the Académie des sciences morales crowned, is given by the fact that in his whole argument on the spuriousness of the Parmenides, Sophist, and Politicus (pp. 269-311, vol. ii. of La vie et l'œuvre de Platon) he quotes Schaarschmidt only once, and this in a note (p. 309) in which he disagrees with him as to the pretended stoic origin of the Sophist. This cautious silence about an author from whom nearly all arguments of the text are taken, and who, in the chapter on the Philebus, is often quoted with a humorous contempt, is an interesting sample of apparent erudition paired with real ignorance of the subject, displayed for the competent reader at every step, despite all the numerous quotations. Thus Campbell is also quoted in irrelevant matters, and appears to the candid reader either as an authority for the spuriousness of the Sophist (vol. ii. pp. 282, 286), or even further from the truth, as a mere critic, populariser or supporter of the views of Dittenberger! (p. 341).

²⁶⁴ F. Horn, Platonstudien, Wien 1893; see against this: Dr. Apelt, 'Die neueste Athetese des Philebos,' in Archiv für Geschichte der Philosophie, vol. ix. pp. 1-23, Berlin 1895, and again the reply of Horn: 'Zur Philebostrage ' in Archiv für Geschichte der Philosophie, vol. ix. pp.

271-297, Berlin 1896.

subject in the Republic, therefore the Philebus cannot have been written by Plato.

We have seen in the above exposition of Plato's logical theories that even such a thinker as Plato could not be in every particular free from errors, which he corrected later. In the course of his long activity he changed his opinion on several important points, which become specially manifest to anybody who cares to compare the Republic with the Laws. Also the Philebus is according to stylistic observations very distant from the Republic—probably about twenty years later. sufficiently accounts for some divergencies. general view of the Philebus is extremely subjective. For him this interesting dialogue is 'ein mit völlig unzulänglichen Mitteln unternommener und höchst schülerhaft gerathener Versuch einer Vermittlung zwischen den ethischen Hauptrichtungen der Zeit.' Other scholars, as, for instance, G. Schneider, who devoted very special attention to the Philebus,265 are of an entirely different opinion and see in the Philebus a masterpiece of Plato's old age.

perhaps twenty years later than Republic.

Philebus.

A masterpiece of Plato's old age.

Progress of thought.

The differences between the *Philebus* and *Republic* are all of such a character that they are perfectly well explained by the length of time and the progress of thought from the earlier to the later dialogue.²⁶⁶ Such differences ought never to be esteemed as an argument against the authenticity of any work of Plato, because

²⁸⁰ G. Schneider, Die Platonische Metaphysik, auf Grund der in Philebus gegebenen Principien in ihren wesentlichsten Zitgen dargestellt, Leipzig 1884; also: 'Die Ideenlehre in Platos Philebus' in Philosophische Monatshefte, vol. z. p. 198, 1874: 'Das Princip des Masses in der Platonischen Philosophie,' Verhandlungen der 33 Philologenversammlung, Gera 1878; Das materiale Princip der Platonischen Metaphysik, Gera 1872.

restigated by F. Schmitt (Die Verschiedenheit der Ideenlehre in Platos Republik und Philebus, Giessen 1891) and Siebeck ('Platon als Kritiker aristotelischer Ansichten: II. Der Philebus,' in Zeitschrift für Philosophie und philosophische Kritik, vol. 107, pp. 161–176, Leipzig 1896). They both agree as to the later date of Philebus; see also note 249.

in this way we might find suspicious almost everything Plato has written. The method which Horn uses consists in exaggerating every difference up to the point at which it appears to be an irreconcilable contradiction; on the other hand, if one dialogue agrees in some particular with another, he takes it as a sign that the author imitated Plato; finally if some opinion measured by the standard of our own time appears wrong, he finds herein an opportunity for representing it as unworthy of Plato. Such reasonings are built on three wrong suppositions: Horn's 1, that Plato never erred; 2, that he never recognised his errors nor changed his opinion; 3, that he never repeated what he said in another work. Any reader of Plato can easily see in hundreds of instances that all these three suppositions are inadmissible, and, we may add, any philosopher will recognise them to be psychologically impossible. But they are the constant basis of nearly everything that has been said against the authenticity of the dialectical dialogues.

view is based on mistaken presumptions.

The only argument of Horn which at all deserves our He attention is advanced without evidence and rests on no strangely quotation from the Philebus. Horn finds in the Philebus 'Geringschätzung der Dialektik' (Zur Philebosfrage, p. 292). The high esteem of dialectic is such a permanent Platonic peculiarity that any work in which dialectic is dialectic despised must excite serious doubts against its Platonic in the origin. But nothing of that sort occurs in the Philebus. Philebus. It is strange and unjustifiable that Horn was not more explicit on that point, and that he did not quote the passages from which he has drawn his inference. It is evident that he misunderstands Plato and takes for irony what is either solemnity of tone or Platonic humour. It does not follow that Plato despised dialectic, when he required that the philosopher should also have other knowledge. This is not even a difference between Philebus and Republic, because there also dialectic was only the crown tive knowof all sciences, and did not render them superfluous. ledge.

speaks of a disparage ment of

Union of practical with speculaThere is a progress in the dialectical dialogues as compared with the *Republic* only in the increasing appreciation of concrete facts and details, which less attracted his attention in the period of self-existing ideas.

But reason must be supreme.

Here we meet the same enthusiasm for the power of reason as in the Sophist and Politicus. He who has elected the life of a thinker is more divine than other men and remains, like a god, free from exuberant pleasures, as well as from the sorrow which usually follows such pleasures (33 A B : τῷ τὸν τοῦ Φρονεῖν ἐλομένω βίον οἶσθ' ώς τοῦτον τὸν τρόπον οὐδεν ἀποκωλύει ζην . . . τον τοῦ μη χαίρειν μηδε λυπείσθαι . . . καὶ ἴσως οὐδὲν ἄτοπον εἰ πάντων τῶν βίων έστι θειότατος . . . οὔκουν εἰκός γε οὔτε γαίρειν τοὺς θεοὺς ούτε τὸ ἐναντίον). The satisfaction given by knowledge is the purest pleasure in human life, free from the pain which mostly accompanies physiological pleasures (52 A B: μαθημάτων πληρωθείσιν εάν υστερον αποβολαί διά της λήθης γίγνωνται . . . χωρὶς λύπης . . . λήθη γίγνεται ἐκάστοτε). These pleasures of science are the privilege of a very small circle of men (52 B: τὰς τῶν μαθημάτων ἡδονὰς . . . ὁητέον . . . οὐδαμῶς τῶν πολλῶν ἀνθρώπων ἀλλὰ τῶν σφόδρα ολίγων). Every manifestation of intellectual life is better than sensual gratification for all those who are able to partake of it (11 B: τὸ φρονεῖν καὶ τὸ νοεῖν καὶ τὸ μεμνήσθαι καὶ τὰ τούτων αὖ ξυγγενή, δόξαν τε ὀρθὴν καὶ ἀληθεῖε λογισμούς, της γε ήδονης άμείνω καὶ λώω γίγνεσθαι ξύμπασιν, δσαπερ αὐτῶν δυνατὰ μεταλαβεῖν).

All sages are agreed that reason reigns on earth and in heaven (28 c: πάντες ξυμφωνοῦσιν οἱ σοφοί, ἐαυτοὺς ὅντως σεμνύνοντες, ὡς νοῦς ἐστὶ βασιλεὺς ἡμῖν οὐρανοῦ τε καὶ γῆς καὶ ἴσως εὖ λέγουσι). This rule of reason becomes manifest by the finality appearing in the magnificence of the universe (28 D: τὰ ξύμπαντα καὶ τόδε τὸ καλούμενον ὅλον . . . νοῦν καὶ φρόνησίν τινα θαυμαστὴν συντάττουσαν διακυβερνᾶν . . . φάναι καὶ τῆς ὅψεως τοῦ κόσμου καὶ ἡλίου καὶ σελήνης καὶ ἀστέρων καὶ πάσης τῆς περιφορᾶς ἄξιον). The ultimate goal of this finality is a

self-sufficing aim, the Good (54 c: τὸ μὴν οὖ ἔνεκα τὸ ένεκά του γιγνόμενον ἀεὶ γίγνοιτ' ἄν, ἐν τἢ τοῦ ἀγαθοῦ μοίρα ἐκεῖνό ἐστι . . . cf. 60 c). This is the union of beauty, measure, and truth (65 A). We see here a development of what had been said in the Republic on the idea of Good. There it was one and the highest idea, here the union of three ideas, one of which, the ideal measure (ξυμμετρία = μετριότης 64 E), has been introduced only in the Politicus (μέτριον Polit. 283 E, Phileb. 66 A corresponds to μετριότης Good. which in that sense occurs besides Philebus 64 E, 65 B only in the Laws 701 E, 736 E, while in Rep. 560 D it has another meaning).

The final aim of Reason is the union of beauty, measure. truth. wherein dwells the

Truth is the aim of each inquiry, and it must be found in agreement among investigators (14 B), not in their ambition to be each of them right against all others. This ambition is peculiar to youth, and is here described Humorous with incomparable humour and a certain benevolence which denotes an experienced teacher, accustomed to see many useless discussions among his pupils (15 D: ἔστι τὸ τοιούτον τῶν λόγων αὐτῶν ἀθάνατόν τι καὶ ἀγήρων πάθος ἐν ήμιν ο δε πρώτον αὐτοῦ γευσάμενος εκάστοτε των νέων, ήσθεις ως τινα σοφίας εύρηκως θησαυρόν, ύφ' ήδονης ένθουσιά τε καὶ πάντα κινεί λόγον ἄσμενος . . . είς ἀπορίαν αύτὸν μὲν πρώτον καὶ μάλιστα καταβάλλων, δεύτερον δ' ἀεὶ τὸν ἐχόμενον . . .). True wisdom consists in defining ideas and their relations, A more until we obtain a continuous system of notions from the complex highest 'one' down to the 'many' through measured degrees, subdividing each idea into the smallest number in order to give the detailed specification of each subdivision of the one (16 D : δείν οὐν ήμας τούτων οὕτω διακεκοσμημένων ἀεὶ μίαν ιδέαν περί παντὸς ἐκάστοτε θεμένους ζητείν εύρήσειν γαρ ενούσαν εαν οθυ μεταλάβωμεν, μετα μίαν δύο, εἴ πως εἰσί, σκοπείν, εἰ δὲ μή, τρείς ή τινα ἄλλον άριθμόν, καὶ τῶν ἐν ἐκείνων ἔκαστον πάλιν ώσαύτως, μέγριπερ αν τὸ κατ' ἀρχὰς εν μὴ ὅτι εν καὶ πολλά καὶ ἄπειρά ἐστι μόνον ἴδη τις, ἀλλὰ καὶ ὁπόσα). system of ideas is to be found in nature, as everything

description of iuvenile logic.

ideal of definition. has been arranged by reason, and our ideas are copies of the world's finality, existing in the maker's mind.

Natural kinds must be numbered and coordinated.

There is no longer any trace of an existence of ideas apart from souls and from particular things. Each idea is the result of the impression which the natural unity of a group of particulars produces in an observing soul. The faculty of thinking ideas is here a divine gift (16 c: θεῶν είs ἀνθρώπους δόσις) and human imperfection consists in errors as to the number of the subdivisions which connect the one with the infinite many (16 D: την δε τοῦ ἀπείρου ίδέαν πρὸς τὸ πλήθος μὴ προσφέρειν, πρὶν ἄν τις τὸν ἀριθμὸν αὐτοῦ πάντα κατίδη τὸν μεταξύ τοῦ ἀπείρου τε καὶ τοῦ ένός). Only gods herein attain perfection (16 E : of μεν οθν θεοί ούτως ήμιν παρέδοσαν σκοπείν και μανθάνειν και διδάσκειν άλλήλους), while even the wisest among men are liable to pass too rapidly or too slowly from the one to the infinity of particulars, through the ignorance of convenient middle terms (17 A : οί δὲ νῦν τῶν ἀνθρώπων σοφοί εν μέν, ὅπως ᾶν τύχωσι, τὰ πολλὰ θᾶττον καὶ βραδύτερον ποιοῦσι τοῦ δέοντος, μετά δε τὸ εν ἄπειρα εὐθύς τὰ δε μέσα αὐτοὺς ἐκφεύγει. οίς διακεγώρισται τό τε διαλεκτικώς πάλιν και το έριστικώς ήμας ποιείσθαι πρός άλλήλους τούς λόγους).

mediate kinds: 'middle terms.'

Inter-

Preparation for the theory of syllogism.

Difficulty of the true method. We see here for the first time the term $\mu \acute{e}\sigma o\nu$ used in its technical meaning as later accepted by Aristotle in his theory of syllogism. If we take into consideration that it would be entirely against Plato's view of literary composition to enumerate all possible figures of syllogism in a dialogue, as is done in Aristotle's treatise, it becomes quite possible and even probable that Aristotle's theory of syllogism was more than prepared by Plato. This point must remain unsettled so long as we have no independent testimonies of contemporaries. At all events, we see in the *Philobus* the same striving as in the preceding dialogues towards an universal system of sciences, and we are warned that the classification of ideas, being the most beautiful method and leading to all discoveries which have ever been made, is exceedingly difficult and full of per-

plexities (16 B). Therefore a complete realisation of the proposed method, and the consequent reduction of all ideas to their highest aim, appears here as a tale heard in a sort of dream (20 B: λόγων ποτέ τινων πάλαι ἀκούσας ὄναρ ή και έγρηγορώς νθν έννοω περί τε ήδονής και φρονήσεως ώς οὐδέτερον αὐτοῖν ἐστὶ τἀγαθόν, ἀλλ' ἄλλο τι τρίτον. This is perhaps a reference to Rep. 505 B).

Careful distinction between truth and probability is recommended, and those arts and sciences in which certainty appears unattainable are deemed inferior (56 A: πολύ μεμιγμένον έχειν το μή σαφές, σμικρον δε το βέβαιον— Dialectic is said of music, medicine, agriculture, strategy, navigation, &c.). The highest perfection here as in the Republic is attributed to dialectic and mathematics (57 Ε: την τοῦ διαλέγεσθαι δύναμιν . . . 58 Α : περὶ τὸ ὅν καὶ τὸ ὅντως καὶ τὸ κατὰ ταὐτὸν ἀεὶ πεφυκὸς πάντως ἐγωγε οἶμαι ἡγεῖσθαι Εύμπαντας, δσοις νου καὶ σμικρον προσήρτηται, μακρώ άληθεστάτην είναι γνωσιν—this after the recognition of mathematical sciences). The priority of dialectic or metaphysics as compared with all other sciences is so insisted upon, that it is difficult to guess on what possible misinterpretation of texts Horn built his contention that dialectic is despised in the Philebus. Plato repeats clearly that only dialectical objects or eternal ideas lead us to absolute certainty (59 c: χρη . . . τόδε διαμαρτύρασθαι τω λόγω, ως ή περὶ ἐκείνα ἔσθ' ήμιν τό τε βέβαιον καὶ τὸ καθαρου και το άληθες και δ δη λέγομεν είλικρινές, περί τά άει κατά τὰ αὐτὰ ώσαύτως άμικτότατα έχοντα, ἡ ἐκείνων δ τι μάλιστά ἐστι ξυγγενές). It is very important to observe Ideas that eternal ideas (ἀεὶ κατὰ τὰ αὐτά) are not now separate. self-existing, or independent existences (αὐτὸ καθ' αὐτό) as they were in earlier dialogues. They are simply eternal, or always the same, because the true thoughts of a perfect being are not liable to change, and ideas are nothing else than ideal notions.

is exalted, despised.

but not χωριστά.

Natural science is represented as deficient in exactness, Imperbecause it does not refer to eternal ideas, but to changing fection

appearances (59 A) which are in time, not in eternity, and

science.

This view confirmed

Timaeus.

Science

pure and

applied.

in the

tophysical can never become an object of absolute knowledge (59 B: τούτων οὖν τι σαφες αν φαίμεν τη ἀκριβεστάτη ἀληθεία γίγνεσθαι, ων μήτε έσχε μηδεν πώποτε κατά ταὐτά μήθ' έξει μήτε είς το νθν παρον έχει; . . . οὐδ' ἄρα νοθς οὐδέ τις ἐπιστήμη περί αὐτά ἐστι τὸ ἀληθέστατον ἔχουσα). This view agrees perfectly well with what has been said on that subject in the Republic, and also with the theoretical views of the dialogue which deals chiefly with natural science, the, It was Plato's permanent conviction that Timaeus. the immense variety of the physical world did not admit of perfect knowledge. The distinction between theoretical and practical or pure and applied science is also here maintained (57 A-E), and illustrated by the example of mathematical units, which are absolutely equal to each other, while for technical purposes units really unequal are counted as equivalent (56 DE: οἱ μὲν γάρ που μονάδας άνίσους καταριθμοῦνται τῶν περί ἀριθμόν, οἶον στρατόπεδα δύο καὶ βοῦς δύο καὶ δύο τὰ σμικρότατα ἡ καὶ τὰ πάντων μέγιστα · οί δ' οὐκ ἄν ποτε αὐτοῖς συνακολουθήσειαν, εί μή μονάδα μονάδος εκάστης των μυρίων μηδεμίαν άλλην άλλης διαφέρουσάν τις θήσει). This idea of unity in variety haunts Plato's mind here as in all the dialectical dialogues. He goes so far as to say that one who is not able to distinguish the quality and quantity of each kind and its opposite deserves no consideration whatever (19 B:

Qualitative and quantitative.

Genus and species. οὐδέποτε γένοιτο ἄξιος). The difference of genus and species is illustrated through many examples, and the species shown to be different and sometimes opposed within one genus (12 E: γένει μέν έστι παν έν, τα δε μέρη τοις μέρεσιν αὐτοῦ τα μεν έναντιώτατα άλλήλοις, τὰ δὲ διαφορότητα έγοντα μυρίαν που τυγγάνει). All the difficulties implied in the relation between the idea and particulars are repeated as it seems

είδη . . . είτ' έστιν είτε μή, και όπόσα έστι και όποια . . . μή δυνάμενοι κατά παντός ένος και όμοιου και ταὐτοῦ και τοῦ έναντίου (δηλώσαι) . . . οὐδείς είς οὐδεν οὐδενὸς ἄν ἡμῶν with a clear reference to a similar exposition of these difficulties in the Parmenides (15 A: Stav Sé tis Eva Abstract ανθρωπον επιχειρή τίθεσθαι . . . περὶ τούτων τῶν ένάδων and καὶ τῶν τοιούτων ἡ πολλὴ ἀμφισβήτησις γίγνεται . . . πρώτον μεν εί τινας δεί τοιαύτας είναι μονάδας ύπολαμβάνειν άληθως ούσας είτα πως αθ ταύτας, μίαν εκάστην οὖσαν ἀεὶ τὴν αὐτὴν καὶ μήτε γένεσιν μήτε ὅλεθρον προσδε- Ideally γομένην, όμως είναι βεβαιότατα μίαν ταύτην). Here is a but not very clear indication that a separate existence of ideas is really deemed impossible (15 B: μετὰ δὲ τοῦτ' ἐν τοῖς γιγνομένοις separable. αὖ καὶ ἀπείροις εἴτε διεσπασμένην καὶ πολλά γεγονυῖαν θετέου, είθ' όλην αὐτὴν αὐτῆς χωρίς, δ δὴ πάντων άδυνατώτατον φαίνοιτ' αν, ταὐτὸν καὶ εν αμα εν ένί τε καὶ πολλοίε $\gamma b \gamma \nu \epsilon \sigma \theta a \iota$). As in the Sophist, the theory of ideas is introduced objectively, and not directly supported by the leader of the conversation, at least nothing is decided about the difficulties referred to. Throughout the dialogue the terms used for ideas have no other meaning than ideal notions, as is the case everywhere after the Parmenides. The nature of thought requires the union of notions into higher units, and this constitutes an eternal necessity of the human mind (15 D). The absolute unity The unity of knowledge is not prevented by many differences and even partial oppositions between sciences (13 Ε: πολλαί ledge τε αί ξυνάπασαι ἐπιστημαι δόξουσιν είναι καὶ ἀνόμοιοί τινες αὐτῶν ἀλλήλαις : εἰ δὲ καὶ ἐναντίαι πη γίγνονταί τινες, ἄρα άξιος αν είην του διαλέγεσθαι νυν, εί φοβηθείς τουτο αυτό μηδεμίαν ανόμοιον φαίην επιστήμην επιστήμη γίγνεσθαι;). opposed, On the other side, we need not attempt a reconciliation of all contradictions (13 A: τούτφ τῷ λόγφ μὴ πίστευε, τῷ πάντα τὰ ἐναντιώτατα ἐν ποιοῦντι).

Sense perception is explained as a motion common to The body and soul, whereby the theory presented in the theory of Theaetetus is repeated and accepted (34 A: τὸ δ' ἐν ἐνὶ πάθει την ψυγην και το σώμα κοινή γιγνόμενον κοινή και κινείσθαι, ταύτην δ' αὖ τὴν κίνησιν ονομάζων αἴσθησιν οὐκ $\dot{a}\pi\dot{a}$ $\tau\rho\dot{a}\pi\sigma\nu$ $\phi\theta\dot{e}\gamma\gamma\sigma\iota$ $\dot{a}\nu$). But the soul can become indif-

concrete unity.

of knowembraces sciences diverse and even

is further developed. Sensation, memory, reminiscence. ferent to the action of the body, and then receives no sensations (33 Ε: ὅταν (ἡ ψυχὴ) ἀπαθὴς γίγνηται τῶν σεισμών τών τοῦ σώματος, αναισθησίαν ξπονόμασον). that state the soul retains the faculty of repeating by its own power the qualitative changes it had undergone on former occasions through the action of the body's movements, and thus reminiscence needs not the co-operation of the body (34 B: ὅταν ἃ μετὰ τοῦ σώματος ἔπασγέ ποθ' ἡ ψυχή, ταῦτ' ἄνευ τοῦ σώματος αὐτὴ ἐν ἐαυτῆ ὅ τι μάλιστα αναλαμβάνη, τότε αναμιμνήσκεσθαί που λέγομεν). tion and memory are the faculties on which opinions rest (38 Β: ἐκ μνήμης τε καὶ αἰσθήσεως δόξα ἡμῖν καὶ τὸ διαδοξάζειν ἐγχειρεῖν γίγνεθ' ἐκάστοτε); our judgments exist in our thought before we give them an expression in words (38 E, cf. Soph. 264 A). Plato insists on the faculty of thought as independent of words and of sense perceptions. We are able to represent to ourselves all past perceptions at our will, and such images do not require the co-operation of the organs of sense (39 B). The origin of error is here, as in the Theaetetus, attributed to indistinct sensations (38 c: πολλάκις ιδόντι τινὶ πόρρωθεν μὴ πάνυ σαφώς τὰ καθορώμενα ξυμβαίνειν βούλεσθαι κρίνειν

son and judgment.

Compari-

Thought independent of language.

The human soul similar to the Divine.

φαίης αν ταῦθ' ἄπερ ὁρά).

Judgments are inscribed on the soul. The possibility of knowledge is founded on the fundamental similarity between each individual soul and the world's soul from which all individual souls are derived, and in which all our notions exist in far greater perfection (30 A: τὸ παρ' ἡμῖν σῶμα ἄρ' οὐ ψυχὴν φήσομεν ἔχειν;— δῆλον ὅτι φήσομεν.—πόθεν λαβόν, εἴπερ μὴ τό γε τοῦ παντὸς σῶμα ἔμψυχον ὁν ἐτύγχανε ταὐτά γε ἔχον τούτῳ καὶ ἔτι πάντη καλλίονα;—δῆλον.ώς οὐδαμόθεν ἄλλοθεν). Our soul is compared to a book, in which memory and sense-perception inscribe opinions and judgments (39 A: ἡ μνήμη ταῖς αἰσθήσεσι ξυμπίπτουσα εἰς ταὐτόν, κἀκεῖνα ἃ περὶ ταῦτά ἐστι τὰ παθήματα, φαίνονταί μοι σχεδὸν οἶον γράφειν ἡμῶν ἐν ταῖς ψυχαῖς τότε λόγους). It may be taken for granted that these opinions remain for Plato essentially different

in no way lowered, as can be seen from the above quotations on dialectic, but it is more and more looked upon as divine and opposed to mere human opinions. Our souls are copies of the world's soul, our notions repeat God's ideas, our knowledge finds out the Creator's final aim. Thus ideas remain eternal, though they have lost their supramundane existence, and are to be sought and found only in souls.

Human knowledge may approximate to the Divine ideas.

There is no substantial difference of doctrine between the Philebus and Politicus, and both belong most probably to the same time. Only in some points the Philebus appears to refer more or less clearly to the Politicus:

The Politicus 1 4 1 and Philebus 1 4 1 represent the same stage of Plato's

- 1. The division of sciences into theoretical and practical (57 A-E) appears here more familiar than in the Politicus (258 E).
- 2. The world's soul has been introduced in the thought. Politicus (270 A), and is mentioned in the Philebus (30 A) as a matter of course.
- 3. The absolute measure (τὸ μέτριον) is explained as a new notion in the Politicus (284 E), while it is here applied (66 A).

These tests are, however, not decisive, and only further stylistic research can lead us to settle the question of priority between these two dialogues, a question which appears not to have a great importance for the understanding of Plato's philosophy so long as both are admitted to be later than the Sophist. The difficulty implied in the union of many different predicates with mined one subject, which has been specially investigated in the Sophist, is here mentioned (14 D) in a manner which seems to point to the discussions of the Sophist. relation of the Philebus to the Parmenides need not be to the insisted on here, as it is recognised even by Zeller, as well Parmeas by many other investigators, including those who have nides and denied the authenticity of the Philebus, as for instance to the Schaarschmidt. Also the question of the relation be-

Priority between Philebus and Politicus not vet deterwith certainty.

Relation Republic. Zeller thought that the Remublic auoted the Philebus. but the Philebus makes no reference to the φρόνησις τοῦ ἀγαθοῦ pointedly mentioned in Rep. 505 c.

tween the Republic and Philebus need hardly be discussed, although Zeller persists in arguing that the Republic is This view has been refuted recently by Siebeck,266 and Zeller has never accounted for the fact that the chief reference in the Republic to the question whether pleasure or reason is the good mentions a difficulty which is not found at all in the Philebus, namely, that the defenders of reason are obliged to confess at last that the sought-for φρόνησιε is φρόνησιε τοῦ ἀγαθοῦ (Rep. 505 B), a position which is declared to be ridiculous (γελοίως). This looks like a criticism of some philosophical opponent who is difficult to identify, and not like a quotation from the Philebus. We have seen above that the Philebus shows in every respect a later stage of thought than the Republic, and stylistic comparisons have made it so evident, that no reasonable doubts remain for those who know Plato's style. Stylistically the Philebus is nearest to the Politicus, the collected evidence being insufficient to decide with certainty which of the two is later. we take into consideration the close connection of the Politicus with the Sophist, and the few points on which the contents of the Politicus allow a comparison with the Philebus, it becomes very probable that this dialogue is the latest in the dialectical group, to which it naturally belongs.

The Philebus probably the latest of the dialectical dialogues.

New dialectic.

Characteristics of the dialectical dialogues. Classification.
The ideas not self-existent.

If now we resume the logical theories of the three dialogues following the *Parmenides*, we observe that their chief peculiarity is the great importance given to division and classification. These logical operations apply here to notions of the human mind, which are similar to the divine ideas. Ideas are no longer self-existing, but exist in the divine mind, and from thence pass to our souls through the observation of concrete particulars. The material world is built up according to God's ideas, and we have to find them out by comparisons and distinctions

This credits the external world with an Reality of particulars. existence which is other than the existence of ideas and of the of souls. Plato first recognised this double meaning of existence, whereby he advanced far beyond his predecessors. The new dialectic is distinguished from middle Platonism and the earlier theory of ideas by the greater importance attached to particulars. No explanation of ideas, the universe is accepted as sufficient, unless it accounts for the smallest and most insignificant detail as well as for the greatest ideas. The unity of all existence is no longer an abstract unity, but a summit built up on the widest basis of the universal experience of mankind, to which each investigator has power to contribute according to his own aptitudes. The attempt made first in the Theaetetus to enumerate the highest categories is experimaintained and carried further throughout the dialectical dialogues. A worship of method, unknown in earlier Platonism, is here predominant over all particular subjects of inquiry. The influence of a long and successful educational activity is visible at every step of the argument, and the final aim of an universal knowledge of all method. reality is sought through constant logical training and reflections on the method of inquiry.

external world, ordered according to God's Importance of particulars. Knowledge based on universal Enumeration of categories. Importance of

CHAPTER IX

LATEST DEVELOPMENTS OF PLATO'S THOUGHT WHILE our view of the way leading Plato from the

group: Timaeus. Critias. Laws.

Coincidences of style and contents.

Protagoras to the Philebus appeared as the result of difficult chronological investigations, and needs still many confirmations before it is generally accepted, there is an almost universal agreement as to the final stage of The latest Plato's philosophy. All critics have unanimously recognised the Timaeus, Critias, and Laws as the latest works of Plato, and there is in this respect scarcely any difference between the representatives of the most diverging views on Plato's chronology. The reasons of this unanimity are found in the peculiar contents of these works, their relation to other earlier writings of Plato. and also in direct testimonies of Aristotle and other witnesses as to the very late date of the Laws, to which the Timaeus and the Critias fragment are nearest in style and doctrine. Campbell has found in Timaeus and Critias eighty-one words which besides these dialogues are found only in the Laws and form so many peculiarities of latest style, absent even from the dialectical There are also some important points of theory in which the Timaeus coincides with the Laws Thus for instance the representation of the stars as bodies belonging to perfect divine souls (Tim. 41 D. Legg. 899 B), and the enumeration of more than two kinds of motion (Tim. 43 B, Legg. 894 D) are important views not found anywhere else in Plato. It is, perhaps, not quite accidental that both in the Timaeus (20 A) and in the Laws (638 B) Locris, not mentioned elsewhere

by Plato, is highly praised, and it may well have a personal explanation in connection with the third voyage to Sicily, or with the tyrannis of Dionysius in Locri (356 B.C.); also Tyrrhenia is mentioned only in the three latest dialogues (Tim. 25 B, Critias 114 c, Legg. 738 c). The number of stylistic peculiarities common to Timaeus and Laws, and peculiar to this group, is very much more considerable than is shown in our reduced list of 500 marks of style, because with a few exceptions such peculiarities as are common only to a very few dialogues have Still it is easy to see that some peculibeen excluded. arities of the Laws are found nowhere else than in the Timaeus or Critias. Such are πρέπον αν είη (312), καθ' $\ddot{\upsilon}$ πνον (432), θορυβώδης (278), οἰστρώδης (268), and some peculiar uses of $\tau \epsilon$ (230, 233, 235). It would be easy to increase this list of peculiarities of the latest style of Plato to any extent, but in view of the universal agreement as to the very late date of Timaeus, Critias, and Laws, it is not necessary to insist any more on this subject. The Critias being a fragment and a close continuation of the Timaeus, we have really only two works to consider in this group: Timaeus and Laws.

I. The Timaeus.

There are very few logical elements in the Timaeus. Here true and probable opinion takes a larger place than in the dialectical dialogues, but the decisive and irreducible difference between such beliefs and perfect knowledge is emphatically maintained (51 D: νοῦς καὶ δόξα ἀληθής... δύο λεκτέον, διότι χωρὶς γεγόνατον ἀνομοίως τε ἔχετον). Knowledge is imparted by teaching, opinion by rhetoric, knowledge is unchangeable, opinion easily overthrown, knowledge is a divine privilege of a few philosophers, opinion a common faculty of all men (51 E: τὸ μὲν γὰρ αὐτῶν διὰ διδαχῆς, τὸ δ' ὑπὸ πειθοῦς ἡμῖν ἐγγίγνεται· καὶ τὸ μὲν ἀεὶ μετ' ἀληθοῦς λόγου, τὸ δὲ ἄλογον· καὶ τὸ μὲν ἀκίνητον πειθοῦ, τὸ δὲ μεταπειστόν· καὶ τοῦ μὲν πάντα ἄνδρα μετέχειν

Priority of soul.

form also an objective system of knowledge, and Plato need not have credited the soul with such an importance in relation to the progress of science. For him the objectivity of knowledge has its only basis in the common origin and similar power of all existing souls. Every soul is anterior to the body, and rules over it (34 c: γενέσει καὶ ἀρετή προτέραν καὶ πρεσβυτέραν ψυχήν σώματος ώς δεσπότιν καὶ ἄρξουσαν ἀρξομένου ξυνεστήσατο . . .). There is an apparent contradiction in the explanation of the relation between soul and space. Once the soul is said to be in the body (30 B: ψυχὴν ἐν σώματι ξυνιστὰς τὸ πᾶν Ευνετεκταίνετο) and then to contain the body and to extend through space or to include it (36 DE: ἐπεὶ κατὰ νοῦν τῷ ξυνιστάντι πασα ή της ψυχης ξύστασις έγεγένητο, μετα τοῦτο παν τὸ σωματοειδες εντὸς αὐτης ετεκταίνετο καὶ μέσον μέση ξυναγαγών προσήρμοττεν). The latter view refers clearly to the world's soul, which animates the universe just as each individual soul animates our individual bodies (30 B C: τὸν κόσμον ζῶον ἔμψυχον ἔννουν τε τῆ ἀληθεία διὰ τὴν τοῦ θεοῦ γενέσθαι πρόνοιαν). But it must be remembered that the whole creation of the world-soul and of individual souls is here given as a myth (30 B: κατὰ λόγον τὸν εἰκότα δει λέγειν), and admits of various interpretation.

The great philosophical thought here illustrated is the perfect unity of the universe, which is represented as the Unity result of an ordering and over-mastering power of a God of the over a primitive indefinite and chaotic matter. There cannot be a multiplicity of worlds, argues Plato, because the true world is only that which contains everything according to God's conception of a perfect whole (31 A: πότερον οὖν ορθως ένα οὐρανὸν προσειρήκαμεν, ή πολλούς καὶ ἀπείρους λέγειν ήν ορθότερον; ένα, είπερ κατά το παράδειγμα δεδημιουργημένος έσται). If several worlds were imagined, one idea of a universe containing them all would still be needed, and thus the whole forms one unique universe (31 Β : ἵνα οὖν τόδε κατὰ τὴν μόνωσιν ὅμοιον ἢ τῷ παντελεῖ ζώω, διὰ ταῦτα οὔτε δύο οὔτ' ἀπείρους ἐποίησεν ὁ ποιῶν κόσμους, άλλ' είς όδε μονογενής ούρανος γεγονώς έστι τε καί έτ' ἐσται, cf. 92 B). Out of the earlier world of ideas existing by themselves and influencing all appearances, there is only one left now, and so transformed that it is scarcely recognisable. It is the idea of the Good transformed into the The good Demiurge, whom we ought not to call really a Creator, because he orders the world only out of a preexisting chaos, without calling into existence anything that was not before. This Demiurge is outside the world, and different from the world's soul. He imparts to the world its shape and present nature, abiding thereafter in his own eternal peace (42 Ε: ὁ μὲν δὴ ἄπαντα ταῦτα διατάξας έμενεν εν τώ έαυτοῦ κατά τρόπον ήθει).

Demiurge and the Good.

This conception of a God, who dwells at a height above the world ordered by him, is common to the Timaeus with the Politicus (272 E: τοῦ παντὸς ὁ μὲν κυβερνήτης, οίον πηδαλίων οἴακος ἀφέμενος, είς τὴν αύτοῦ περιωπὴν ἀπέστη, τὸν δὲ δὴ κόσμον πάλιν ἀνέστρεφεν είμαρμένη τε καὶ ξύμφυτος ἐπιθυμία), where also the contrast between blind necessity and divine rule has been first recognised. God's self-contemplation of the Politicus has been here developed into an invariable peace. The difference between Time and Politicus and Timaeus consists in a more complete sepa- Eternity.

ration of time and eternity. While in the Politicus divine rule and the power of necessity alternated in time, and thus formed consecutive periods, we have here an eternal permanent influence of divine rule opposed to the working of necessity in time. The Demiurge of the Timaeus (cf. Rep. 530 A: τοῦ οὐρανοῦ δημιουργός, also 597 BC) is good and free from envy, desiring to make everything as like himself as possible (29 E: άγαθὸς ην, άγαθῶ δὲ οὐδείς περὶ οὐδενὸς οὐδέποτε ἐγγίγνεται φθόνος τούτου δ' εκτὸς ὢν πάντα ὅ τι μάλιστα γενέσθαι $\hat{\epsilon}\beta o \nu \lambda \dot{\eta} \theta \eta \pi a \rho a \pi \lambda \dot{\eta} \sigma \iota a \hat{\epsilon} a \nu \tau \hat{\omega}$). He is the best of all causes (29 A: ἄριστος τῶν αἰτίων), and it is difficult for us to find him out, more difficult still to explain him to others if they are unable to find him by their own reason (28 c: του μεν οθυ ποιητήν καὶ πατέρα τοθδε τοθ παντὸς εύρεῖν τε ἔργον καὶ εύρόντα εἰς πάντας ἀδύνατον His influence is compared to the free conviction of one soul by another, not to the necessary action of one body on another (48 A: νοῦ δὲ ἀνάγκης ἄρχοντος τῷ πείθειν αὐτὴν τῶν γιγνομένων τὰ πλεῖστα ἐπὶ τὸ βέλτιστον ἄγειν, ταύτη κατά ταῦτά τε δι' ἀνάγκης ήττωμένης ύπὸ πειθοῦς ἔμφρονος οὕτω κατ' ἀργὰς ξυνίστατο τόδε τὸ πᾶν . . . 56 C : ὅπηπερ ἡ τῆς ἀνάγκης ἐκοῦσα πεισθεῖσά τε φύσις ὑπεῖκε). He is supposed to have found already in existence matter with its necessary forces and movements (30 A: παν όσον ην όρατον παραλαβών οὐχ ήσυχίαν άγον άλλα κινούμενον πλημμελώς και ατάκτως, είς τάξιν αὐτὸ ήγαγεν ἐκ τῆς ἀταξίας, ἡγησάμενος ἐκεῖνο τούτου πάντως άμεινον), but this is not necessarily to be understood as occurring in time, otherwise it would contradict one of the most important axioms of latest Platonism, the priority of soul.

God is unenvious and rules through free conviction.

The course is mythical, ' similar to truth':

For a correct interpretation of the story of creation whole dis- as told in the Timaeus we must constantly keep in mind that it is a mythical and allegorical exposition, which from the outset does not pretend to be true, but only similar to truth. Plato having reached his

view of an eternal existence out of time, can scarcely the action have believed in a beginning of the world in time. If he is not to represents the divine reason as introducing order in the chaotic world of matter, he does not mean that this chaotic disorder had a temporal priority. He only wishes to impress upon the reader's mind the truth that wherever order and reason are found, they ought to be ascribed to divine influence, the origin of all order and thought (30 A B : θέμις δε οὐτ' ἢν οὐτ' ἔστι τῷ ἀρίστω δράν ἄλλο πλὴν τὸ κάλλιστον : λογισάμενος . . . νοῦν μὲν ἐν ψυχῆ, ψυχὴν δὲ ἐν σώματι ξυνιστάς τὸ πᾶν ξυνετεκταίνετο, ὅπως ὅ τι κάλλιστον είη κατά φύσιν ἄριστόν τε έργον ἀπειργασμένος). Taking this for granted, we shall easily recognise that The ideas the ideas were nothing else for Plato when he wrote the of the Timaeus than God's thoughts. We see that he rerepeatedly represents the ideas as included in thought (28 Α : νοήσει μετά λόγου περιληπτόν . . . 29 Α : λόγω καὶ φρονήσει περιληπτόν). They are always the same (28 A: åεὶ κατὰ ταὐτά, cf. 29 A, 38 A, &c.) and unchangeable, Time. because they have no beginning nor end, nor existence in time (38 A: τὸ ἀεὶ κατὰ ταὐτὰ ἔχον ἀκινήτως οὔτε πρεσβύτερου ούτε νεώτερον προσήκει γίγνεσθαι διά χρόνου ούδε γενέσθαι ποτε ούδε γεγονέναι νύν ούδ' είσαῦθις έσεσθαι), nor participation of any kind in particulars, being inaccessible to the senses, but evident to reason (52 A: τὸ κατὰ ταὐτὰ είδος έχου, αγέννητον και ανώλεθρον, ούτε είς έαυτο είσδεχομενον άλλα άλλοθεν ούτε αύτὸ εἰς άλλο ποι ἰόν, ἀόρατον δὲ καὶ ἄλλως ἀναίσθητον, τοῦτο δ δὴ νόησις εἴληχεν ἐπισκο- $\pi \epsilon \hat{i} \nu$). The eternal nature of ideas is expressed by various terms: they are ἀίδια (29 A, 37 D) or have a φύσις αἰώνιος (37 D) whereby their separate existence in time is recognised to be impossible. Their function is to be eternal They are models of thought, first existent in God's mind, then reproduced in the investigating souls of men. The term patterns παράδειγμα is now constantly applied to ideas (28 A, 37 c, 39 E. 48 E. &c.); they are the models according to which the Demiurge has brought order in the world, and we are

be understood as happening in time.

> Timaeus are God's thoughts, and are ont of

models or of our best thoughts

and of natural kinds.

Animated Beings.

able to recognise these models by our own soul's activity. This applies more especially to the natural types which form the limits and definition of each kind of animals. The conception of an animal or animated body becomes more prominent here than ever before. Not only the whole world is an animal, but also each star is the body of a divine animal or a god, distinguished from all other animals by its subtle matter (fire), by the perfection of its spherical shape, and by the great regularity of its movements (40 A: τοῦ μὲν οὖν θείου τὴν πλείστην ιδέαν ἐκ πυρὸς άπειργάζετο . . . νείμας περί πάντα κύκλω τον ουρανόν . . . κινήσεις δε δύο προσήψεν εκάστω, την μεν εν ταύτω κατά ταυτά περί των αυτών άει τὰ αυτά έαυτώ διανοουμένω. την δε είς το πρόσθεν ύπο της ταύτου και όμοιου περιφοράς κρατουμένω).

Conditional immortality.

mortal soul of the Timaeus.

The

Anticipated in Polit. 309 c.

It is exceedingly important for the understanding of latest Platonism that even these perfect gods with perfect souls are no longer conceived as absolutely immortal by their own nature; they owe their permanence to the Demiurge's personal will (41 A: the Demiurge speaks: θεοί θεών, ών έγω δημιουργός πατήρ τε έργων, α δι' έμου γενόμενα άλυτα έμου γε μη έθέλοντος). We see here a theory which to some extent was already implied in the Phaedrus: only the simple substance is indestructible, all compounds being reducible to their elements, and subsisting only through the divine influence. The last consequence of this view had not been drawn in the Phaedrus: there the human soul, with its three parts, existed indefinitely; here a mortal part of the soul is distinguished from its immortal part. To this mortal part belongs nearly everything that constitutes personal character: pleasure and pain, courage and fear, anger and hope, perception and love (69 c: ἄλλο τε είδος ψυχής προσφκοδόμουν τὸ θνητόν, δεινά καὶ ἀναγκαῖα ἐν ἐαυτῷ παθήματα έχου). A vague distinction of a divine and a human or animal part of the soul was occasionally touched upon in the Politicus (309 c: τὸ ἀευγενὲς δυ τῆς

ψυχής αὐτῶν μέρος θείω ξυναρμοσαμένη δεσμώ, μετὰ δὲ τὸ θεῖον τὸ ζωογενες αὐτῶν αὖθις ἀνθρωπίνοις), but only here we find a nearer explanation of this difference which exceeds in importance all previous partitions of the soul.

The mortal part corresponds to the two earlier inferior divisions, with the difference that alobyous combined with έρως takes the place of ἐπιθυμία, and that θυμός holds a lower rank than formerly (42 A: πρῶτον μὲν αἴσθησιν αναγκαίον είη μίαν πασιν εκ βιαίων παθημάτων ξύμφυτον γίγνεσθαι, δεύτερον δε ήδονή καὶ λύπη μεμιγμένον έρωτα, πρὸς δὲ τούτοις φόβον καὶ θυμὸν ὅσα τε ἐπόμενα αὐτοῖς καὶ ὁπόσα ἐναντίως πέφυκε διεστηκότα). The lower part of the soul occupies the lowest part of the body, and is common to men with other animals and plants (77 Β: μετέγει . . . τοῦτο . . . τοῦ τρίτου ψυχής εἴδους, δ μεταξύ φρενῶν ὀμφαλοῦ τε ίδρῦσθαι λόγος, ὁ δόξης μὲν λογισμοῦ τε καὶ νοῦ μέτεστι το μηδέν, αισθήσεως δε ήδείας και άλγεινης μετά έπιθυμιών).

It is very remarkable that the successive incarnations Re-incarof the immortal part of the soul are maintained, with the nation. supposition that in each incarnation the lower activities grow with the body. Thus it is admitted that not only the same soul is repeatedly incarnated on earth in the shape of men or women, but also the possibility of a descent into the form of lower animals is left (42 BC). Under these circumstances nothing remains for the immortal part of the soul except the abstract conception of a principle (ἀρχή 42 E), as already formed in the Phaedrus with special reference to motion. A place in the body is assigned to this immortal soul in the head (69 E) in order to keep it apart from lower tendencies. Knowledge is the head. only activity of this immortal principle, which is the divine element in man (90 D: τω δ' ἐν ἡμῖν θείω ξυγγενεῖς είσι κινήσεις αι του παντός διανοήσεις και περιφοραί). ultimate aim is here as in the Phaedo and Theaetetus to ledge the become as like God as possible, only here feelings and supreme even virtues appear to be excluded from the divine perfection, for which only pure knowledge is left.

immortal principle of thought located in the

is the result of the dialectical construction of universal As knowledge was the starting point of Socratic Platonism, it becomes the final aim of Plato's life. same idea of intellectual exercise which had such importance from the Parmenides onwards is also here the predominant factor in reaching the aims of knowledge, being identified with a kind of movement which corresponds to the best part of the soul (89 E, cf. 90 B). These of Reason. movements produce the various categories of reason, which are here more fully enumerated than in the Sophist. being very closely similar to the Aristotelian list of categories:

Categories

Tim. 37 A B: (ἡ ψυχή) . . . λέγει κινουμένη δια πάσης ξαυτής, ότφ τ' αν τι τα ὑτὸν ἢ καὶ ὅτου ἀν ἔτερον, πρὸς ὅ τί τε μάλιστα καὶ ὅπη καὶ δπως καὶ όπότε ξυμβαίνει κατά τὰ γιγνόμενά τε πρός εκαστον εκαστα είναι καὶ πάσχειν καὶ πρὸς τὰ κατὰ ταὐτὰ ἔχοντα ἀεί.

Arist. Categoriae 1 b 25 : τῶν κατά μηδεμίαν συμπλοκήν λεγομένων εκαστον ήτοι οὐσίαν σημαίνει ή ποσον η ποιον η πρός τι η που η ποτέ η κείσθαι η έχειν η ποιείν η πάσχειν: cf. Topic. 103 b 20, and above, pp. 368-369, on the categories in Theaet.

For Plato these are the highest kinds of ideas, while Aristotle looks upon the categories as chief kinds of words. But the conception of categories, as later understood in the history of philosophy, we owe to Plato. He explains in the Timaeus our faculty of judging all existence through the recognised identity of substance The familiar distinction between judgin all souls. ment as an act of the soul and the sentence as an expression of judgment recurs here also (37 B: λόγος ἐν τῶ κινουμένω ὑφ' αὐτοῦ φερόμενος ἄνευ φθόγγου καὶ ηχης) and judgment includes opinion as well as knowledge (37 c: δόξαι καὶ πίστεις . . . νοῦς ἐπιστήμη τε). The reason acts by distinctions, and requires for the full development of its activity a certain limitation of the stream of bodily changes (44 B).

Judgment and sentence. Control of bodily conditions necessarv to thought.

Antenatal vision of

Each soul is supposed to have seen once the nature of the whole universe and the moral laws which thus are an innate possession of each individual (41 E: διείλε

ψυχὰς ἰσαρίθμους τοῖς ἄστροις, ἔνειμέ θ' ἐκάστην πρὸς Truth and έκαστου, καὶ ἐμβιβάσας ώς ἐς ὄχημα τὴν τοῦ παντὸς φύσιν Good. έδειξε, νόμους τε τους είμαρμένους είπεν αὐταις). It is highly Physical characteristic of Platonic logic that such knowledge does not refer to the physical occurrences in the world, as to which Plato has only to offer uncertain opinions and probabilities which do not even pretend to be consistent or to attain any exactness (29 c: ἐὰν οὖν πολλὰ πολλῶν είπόντων περί θεών και της του παντός γενέσεως, μη δυνατοί must not γιγνώμεθα πάντη πάντως αυτούς ξαυτοίς όμολογουμένους λόγους καὶ ἀπηκριβωμένους ἀποδοῦναι, μη θαυμάσης). Full knowledge as to these things must be left to God, while men must be satisfied with probable myths and ought not to search further (29 D). Physical investigation is held to opinion. be only a convenient pastime in moments when we are tired of metaphysical inquiry (59 c). The same uncertainty refers to empirical psychology as well as to general physics (72 D: τὰ μὲν οὖν περὶ ψυχής, ὅσον θνητὸν ἔχει καὶ ὅσον θεῖον, καὶ ὅπη, καὶ μεθ' ὧν, καὶ δι' ὰ χωρὶς ωκίσθη, τὸ μὲν ἀληθές, ὡς εἴρηται, θεοῦ ξυμφήσαντος τότ' ἂν οὕτω μόνως διισγυριζοίμεθα).

The sensible world consists of appearances which are becoming and changing without true permanent existence (28 Α : δόξη μετ' αἰσθήσεως ἀλόγου δοξαστόν, γιγνόμενον καὶ ἀπολλύμενον, ὄντως δὲ οὐδέποτε ὄν). The physical universe, Every like everything that is material, had a beginning (28 B: σκεπτέου . . . πότερου ην αεί, γενέσεως αρχην έχων οὐδεμίαν, η γέγονεν, ἀπ' ἀργης τινὸς ἀρξάμενος. γέγονεν · ὁρατὸς γὰρ άπτός τέ έστι καὶ σωμα έγων, πάντα δὲ τὰ τοιαῦτα αἰσθητά. τὰ δ' αἰσθητά, δόξη περιληπτὰ μετ' αἰσθήσεως, γιγνομενα καὶ γεννητὰ ἐφάνη). But if Plato adds later that the in the world did not begin in time but together with time, leaving it open whether both will have an end (38 B: χρόνος δ' οὖν μετ' οὐρανοῦ γέγονεν, ἵνα ἄμα γεννηθέντες άμα καὶ λυθώσιν, άν ποτε λύσις τις αὐτῶν γίγνηται), he authorises us to interpret the beginning of the world not as a temporal beginning, but a relation of dependence of

occurrences into which human beings inquire curiously matters of

that is material had a beginning; but only sense that it is dependent on Divine Power. The

world is made in the likeness of an eternal pattern. the material world on a divine power. Physical appearances are represented as an imitation or an image of the eternal ideas (29 Β: πᾶσα ἀνάγκη τόνδε τὸν κόσμον εἰκόνα τινὸς εἶναι, cf. 49 Α: μίμημα παραδείγματος, γένεσιν ἔχον καὶ ὁρατόν).

The ideas seem to be chiefly limited to natural kinds, and do not include some of the most general physical notions which are investigated in the Timaeus with special care, namely time, space, matter, and causality. The analysis of these notions is not without logical importance and therefore deserves our attention. is a moving image of the eternal nature of ideas, and is placed into close relation with the movements of stars (37 D: εἰκὼ δ' ἐπινοεῖ κινητόν τινα αἰῶνος ποιῆσαι, καὶ διακοσμών αμα οὐρανὸν ποιεί μένοντος αἰώνος ἐν ἐνὶ κατ' άριθμον ιούσαν αιώνιον εικόνα, τούτον δυ δη γρόνον ώνομάκαμεν). This acts in obedience to a very primitive consideration: days, months, and years are made by the celestial movements, and as they are parts of Time, Plato infers that Time itself is a product of those movements (37 Ε: ημέρας καὶ νύκτας καὶ μηνας καὶ ἐνιαυτούς, οὐκ οντας πρίν ουρανον γενέσθαι, τότε αμα εκείνω ξυνισταμένω την γένεσιν αὐτῶν μηγανᾶται · ταῦτα δὲ πάντα μέρη γρόνου, καὶ τό τ' ἢν τό τ' ἔσται χρόνου γεγονότα είδη). Thus Plato did not reach the abstract conception of time, and knew only concrete durations measured by physical movements.

General
physical
notions:
Time,
Space,
Matter,
Causality.

Conception of Space. More elaborate is the conception of space, which Plato introduces as co-ordinated to ideas and their images at a later stage of the inquiry, expressly avowing that he had omitted it at the beginning (49 A: τρίτον δὲ τότε μὲν οὐ διειλόμεθα, νομίσαντες τὰ δύο ἔξειν ἰκανῶς). He finds this notion very difficult to explain, and unlike Time, Space is admitted to exist before matter, being necessary for the reception of matter into being (49 A: πάσης εἶναι γενέσεως ὑποδοχὴν αὐτὴν οἶον τιθήνην). The imagined identity of all matter is here the starting point (49 B), based on the observation that water becomes ice as well as

steam, or air, which is supposed to be susceptible of a change into fire (49 c), thus forming a circle of transformations. From the fact of transformations the unreality of appearances is inferred, and the reality underlying them is found in the notion of space, free from any determining Space quality (49 E). Plato's fondness for proportions and void of analogies finds here also an opportunity for display. Space has the same relation to matter as matter to form (50 A). Thus, if various forms were given to one and the same matter, for instance gold, each particular object could best be named gold, and not according to its special changing form. In a similar manner space remains always the same, however different qualities of matter might fill it. Here we see Plato advancing to a more abstract notion Notion of than he had of time, and he feels the difficulty of explaining it. He calls it by different names, beginning with δύναμις (49 A, 50 B) and φύσις (50 B), and ending with χώρα (52 A). It is τὰ πάντα δεχομένη σώματα φύσις (50 B), πάσης Time. γενέσεως ύποδογη οίον τιθήνη (49 A), το εν ώ γίγνεται (50 c). Space has no shape, but appears differently according to the phenomena occurring in it (50 c: δέγεταί τε ἀεὶ τὰ πάντα, καὶ μορφήν οὐδεμίαν ποτε οὐδενὶ τῶν εἰσιόντων ὁμοίαν εἴληφεν οὐδαμῆ οὐδαμῶς). It is not an idea, nor imitates any idea (50 Ε: ἄμορφον ον ἐκείνων ἀπασῶν τῶν ἰδεῶν, ὅσας μέλλοι δέχεσθαί ποθεν . . . πάντων έκτὸς είδῶν είναι χρεών τὸ τὰ πάντα ἐκδεξόμενον ἐν αὐτῷ γένη). Its relation to the ideas is recognised to be most difficult to explain (51 A: άνόρατον είδός τι και άμορφον, πανδεχές, μεταλαμβάνον δε άπορώτατά πη τοῦ νοητοῦ καὶ δυσαλωτότατον αὐτὸ λέγοντες οὐ ψευσόμεθα). Space is conceived not by the senses, nor by pure reason, but by a kind of fictitious inference which has however a necessary character (52 AB: γένος ον τὸ τῆς χώρας ἀεί, φθορὰν οὐ προσδεχόμενον, ἔδραν δὲ παρέχον όσα έχει γένεσιν πασιν, αὐτὸ δὲ μετ' ἀναισθησίας άπτὸν λογισμῷ τινὶ νόθω, μόγις πιστόν, πρὸς δ δὴ καὶ ὀνειροπολουμεν βλέποντες καί φαμεν άναγκαιον είναί που τὸ ον απαν ἔν τινι τόπφ καὶ κατέχον χώραν τινά). Space has been thus Matter.

Space more abstract than of

represented as an indispensable condition of matter, though essentially differing from matter. The difference consists in the entire absence of quality in space, while matter is held to be always qualified.

To illustrate the relation of space to matter, Plato uses many metaphors taken from the impregnation of one matter by another. Thus various perfumes can be communicated to an oil which has no smell by itself, various shapes to a shapeless clay (50 E). The chief kinds of matter, as earth, water, air, and fire, can be changed into one another (49 B), and existed in space before the Demiurge set to work (52 D). The different qualities of matter are only appearances resulting from a variety of movements (52 D). There are amid all the mythical fictions of the Timaeus some wonderful glimpses of deep insight which betray Plato's genius. Thus he speaks about invisible matter and its infinitely small elements (56 c : διὰ σμικρότητα οὐδὲν ὁρώμενον ὑφ' ἡμῶν), about the stream of matter passing through our body (43 A: ἐπίρρυτον σώμα καὶ ἀπόρρυτον), about the spermatozoa, which he seems to have divined many centuries before their actual discovery (91 c: μέχριπερ αν εκατέρων ή επιθυμία καὶ ὁ ἔρως ξυνδιαγαγόντες . . . ώς είς ἄρουραν τὴν μήτραν άόρατα ύπὸ σμικρότητος καὶ άδιάπλαστα ζώα κατασπείραντες και πάλιν διακρίναντες μεγάλα έντος έκθρέψωνται και μετά τοῦτο είς φως αγαγόντες ζώων αποτελέσωσι γένεσιν). By a strange divination he calmly teaches us, in agreement with our modern discoveries, that each particle of water consists of three atoms, two of one gas and one of another (56 D), thus anticipating the results of Lavoisier's experiments. But he declares the analysis of colours to transcend human ability, and to be a divine privilege (68 D). On the contrary, stereometry is here advanced (53 c-55 c) beyond the stage complained of in the Republic.

Causality: final and efficient causes.

One of the distinctions made by Plato already in the *Phaedo* is here developed and fully explained. The difference between final and efficient causality has a consi-

derable place in Platonism; while at an earlier stage only the final cause had been recognised as a true cause and opposed to the current notion of causality as employed by Anaxagoras, Plato later admitted efficient causes, and this change had a close relation to the increasing importance of the notion of movement in his system. (See above, p. 452.)

The terminology established in the Politicus is here con-The final cause is named airroy, and acts current everywhere, nothing being possible without an aim (28 A: παν δε αθ το γιγνόμενον υπ' αιτίου τινος εξ ανάγκης γίγνεσθαι. Mechaniπαντί γὰρ ἀδύνατον χωρίς αἰτίου γένεσιν σχείν). Vulgar people call aition what is only Euraition, namely, material Euraitia causes, used by God only as means for the realisation of the best which is his aim (46 c). The reason of the superiority of final causes over mechanical causation lies in the absence of reason and design from physical causation, if considered alone and apart from aims which can be conceived only by a soul (46 D: τῶν γὰρ ὄντων ὧ νοῦν μόνω κτασθαι προσήκει, λεκτέον ψυχήν). The philosopher, as lover of reason and knowledge, thinks more highly of aims of the mind than of necessities of matter (46 E). The final cause is here identified with a first source of movement and contrasted with the physical cause which is a movement caused from without. It is also called Reason divine or free, as opposed to what is necessary (68 Ε: διὸ δη χρη δύ αίτίας είδη διορίζεσθαι, το μεν άναγκαῖον, το δε θείου). The mechanical cause, here as in the Politicus called Euvairion and identified with the necessary condition without which, as stated in the Phaedo, the aim could not be reached, is blind Necessity (ἀνάγκη, 48 A), opposed to Reason. Reason acts on Necessity, leading it to the best aim, and Necessity yields to Reason (48 A: νοῦ δὲ ἀνάγκης ἄργοντος τῷ πείθειν αὐτὴν τῶν γιγνομένων τὰ πλείστα έπι το βέλτιστον άγειν, ταύτη κατά ταθτά τε δί ἀνάγκης ήττωμένης ύπὸ πειθούς ἔμφρονος οὕτω κατ' ἀρχὰς Ευνίστατο τόδε τὸ πᾶν).

This general view of Being and Becoming, as given

Being and

Place

of the Timaaus.

Becoming. in the Timaeus, is not essentially different from the theories contained in the dialectical dialogues, and some theories of the Timaeus are already prepared for in the Phaedrus This leaves very few points for confirmand Theaetetus. ing by detailed comparison the place generally assigned to the Timaeus towards the end of Plato's literary activity. We are justified in accepting in this case the agreement among all investigators (with insignificant exceptions, as, for instance, Munk and Schöne), because the theories here observed agree exceedingly well with the Politicus and Philebus, two very late dialogues, and because the style of the Timaeus is nearer to the style of the Laws than the style of any other dialogue. This is here affirmed as the result of the personal impression produced by the perusal of many thousands of stylistic observations; it would take too much space to enumerate here all the peculiarities of style common to the Laws with the Timaeus only, and we refer the reader to Ast's Lexicon and to the authors quoted in Chapter III. In all these works he will find sufficient evidence for the great stylistic affinity of the Timaeus with the Laws,

Stylistic affinity to the Laus.

proceed-

ing apart

from God.

1. The relation to the Politicus in the theory of final and efficient causes, as explained above.

the Timaeus after the dialectical dialogues:

an affinity far exceeding the numbers of our own table of affinity, based only on 500 peculiarities. Besides the style there are still the following arguments in favour of placing

- 2. The relation to the Politicus in the theory of God's retirement from the world.
- 3. The transition from the form of a dialogue to a continuous exposition, recurring in this form only in certain parts of the Laws. Longer speeches in earlier dialogues were either of no didactic character (Apology, Protagoras, Menezenus) or interrupted by many questions and answers (Gorgias, Symposium). Such a purely didactic exposition in a longer speech without interrup-

tion is a peculiarity of the Timaeus, Critias, and Laws, 3. Confound nowhere earlier.

- 4. The view that the same elements are common to man with the universe is found in both the Philebus and the Timaeus, but presents in the Timaeus a more advanced stage. In the Philebus this view is introduced as new and as a daring feat (29 A: συγκινδυνεύωμεν καὶ μετέγωμεν and τοῦ ψόγου, ὅταν ἀνὴρ δεινὸς Φῆ ταῦτα μὴ οὕτως ἀλλ' ἀτάκτως Nature. Eyeuv—this refers to the preceding axiom that reason has ordered everything, and also to the following hypothesis: ότι σμικρον τούτων έκαστον παρ' ήμιν ένεστι και φαύλον και οὐδαμῆ οὐδαμῶς είλικρινὲς ὂν καὶ τὴν δύναμιν οὐκ ἀξίαν τῆς φύσεως έχου). An attempt is made to prove it by induction (29 B: ἐν ἐνὶ δὲ λαβὼν περὶ πάντων νόει ταὐτόν. οἰον πῦρ μὲν ἔστι που παρ' ἡμῖν, ἔστι δ' ἐν τῷ παντί. . . . σμικρὸν μέν τι τὸ παρ' ήμιν καὶ ἀσθενὲς καὶ φαῦλον, τὸ δ' ἐν τῶ παντὶ πλήθει τε θαυμαστον καὶ κάλλει καὶ πάση δυνάμει τῆ περὶ $\tau \hat{o} \pi \hat{v} \rho o \tilde{v} \sigma \eta$). All this is supposed to be known in the Timaeus, and needs no further demonstration.
- 5. The world's soul as the origin of individual souls is also first introduced in the Philebus (30 A), and appears there as something new, while the same view is the basis of the mythus in the Timaeus. The relation in this respect of Timaeus and Philebus is similar to the relation between Phaedrus and Republic in the question of hinted in the threefold partition of the soul: the mythical exposi- Philebus. tion uses truths previously reached by reasoning. This is not necessarily a general rule, as at an earlier stage the intuition of ideas was first mythically given in the Symposium, then reasoned out in the Phaedo. But as Plato later had an increasing liking for myths, it is natural that he should represent also mythically truths which had been earlier set forth as based on reasoning.
- 6. Philosophy is represented as gift of Gods in Philebus and Timaeus. Though this is a commonplace of Platonism, there is in the form in which the mention is

tinuous ехровіtion. 4. The elements in Man

> 5. Human souls derived from the world's soul. as

6. Philosophy a gift from God. made in the *Timaeus* something that may well be interpreted as a reminiscence of the *Philebus*:

Phil. 16 0: θεῶν μὲν els ἀνθρώπους δόσις, ὡς γε καταφαίνεται ἐμοί, ποθὲν ἐκ θεῶν ἐρρίφη διά τινος Προμηθέως ἄμα φανοτάτῳ τινὶ πυρί. Tim. 47 AB: ... ἐπορισάμεθα φιλοσοφίας γένος, οδ μεῖζον ἀγαθὸν οὅτ' ἦλθεν οὅτε ἦξει ποτὲ τῷ θνητῷ γένει δωρηθὲν ἐκ θεῶν.

7. Doctrine
of senseperception.
8. God
free from
pleasure
and pain.

- 7. The explanation of sense-perception in the *Philebus* (33 D) as a movement communicated to the soul through the body is more elementary than the corresponding mention in the *Timaeus* (43 c).
- 8. The state of God as free from pleasure or pain is announced in the *Philebus* to be the subject of a future inquiry (33 Β: τοῦτο ἔτι καὶ εἰσαῦθις ἐπισκεψώμεθα, ἐὰν πρὸς λόγον τι ἢ), and the *Timaeus* more than any other work seems to correspond to that announcement.

Relation to the Republic.

In the above statement we have made no use of the peculiar relation of the Timaeus to the Republic. reference to the Republic at the beginning of the Timaeus is unmistakable, but the relation of the two dialogues is not quite the same as the relation of the Sophist to the Theaetetus. In the Sophist we have a direct continuation of the Theaetetus, and the persons of the dialogue are the same, with the single addition of the Eleatic guest. In the Timaeus the scene is different from that of the Republic, and Plato recurs to the fiction that the substance of the Republic dialogue has been narrated on the previous day to the persons first appearing in the Timaeus. fiction is deemed insufficient and improbable by the author himself, and he puts in the mouth of Socrates a recapitulation of the preceding dialogue. In that recapitulation not the whole of the Republic is included, and no mention is made of the four last books. Far-reaching inferences have been made from this omission, about the structure of the Republic as well as about the date of the Timaeus.

Timaeus separated oy a long The most obvious conclusion would be to allow a longer distance of time between *Republic* and *Timaeus* than between *Theaetetus* and *Sophist*. This conclusion is con-

firmed by our whole inquiry and best explains the great interval change of style and of the literary manner. Other conclu- from the sions, at first sight plausible, are refuted by the considera- Republic. tion of style. The recapitulation of the Timaeus seems to refer only to the first five books of the Republic, and thus we might be tempted to suppose that it was written before the following five books. But in view of the great unity of composition of the Republic and of the great homogeneity of its style, it is impossible to separate the fifth book from the following by any other work. On the other hand, the close relation of the Timaeus to the Laws makes it very probable that some twenty years have come between that apparent sequel of the Republic and the work which it presupposes. Under these circumstances it is very natural that Plato should omit some details from his recapitulation, and should limit it to the most general results, which happen to be concentrated in the first five books. There is also another psychological reason why Rule of he should not now insist on the rule of the philosophers, which is the chief subject of the sixth and seventh books of the Republic. We must assume that the Timaeus at all omitted events is written after the third voyage to Sicily (361 B.C.), in the and after Plato's great and definitive failure to obtain Timpens. political ascendency. His explanation of that failure is given in the Politicus, where he says that the ideal state is too perfect for mankind, and that the philosopher who could bring it into existence ought to be a god. Now in the Timaeus he plans a practical representation of the conflict between a perfect state and its neighbours. This conflict has not been represented by Plato, because he left the Critias unfinished. But we have every reason to assume that he did not intend to identify in everything the historical state of primitive Attica with the ideal state of the Republic. The outline given at the beginning of the Critias confirms that assumption. Thus it is natural that fixed laws had to play a greater part in the old state of Athens than in the Republic. Still the identification of

philosophers, whv

the political ruler with the philosopher is here also alluded to (19 Ε: φιλοσόφων ἀνδρῶν καὶ πολιτικῶν) in a similar manner to that which appears in the Politicus. Philosophy remains the greatest gift of gods to men (47 B), and ignorance an illness of the soul (86 B). Also the low estimate of poets is maintained (19 D), with a similar ironical compliment to that in the Republic. Generally, whoever considers impartially the relation of these two dialogues must recognise not only that the Timaeus presupposes the whole of the Republic, but that it appears to be very much later.

Thus the place of the *Timaeus* as nearest to the *Laws* is confirmed by every consideration, and no valid objection can be raised against this conclusion. It remains, however, desirable that the great number of stylistic peculiarities of this latest group should be collected and classified in order to confirm the common verdict of all competent authorities.

Il. The Critias.

The Critias unfinished: why?

There is little to say in the present connection about this small fragment of a dialogue left unfinished by Plato for some reason unknown. If we consider the great interest manifested in its introduction for the intended subject of this work, and the circumstance that it is the only fragmentary work of Plato, the most natural supposition is that only death could have prevented him from carrying out such a cherished plan as that of the Timaeus trilogy. This supposition is also confirmed by the very late style of the Critias, but a definitive proof could be given only through stylometric comparison of the Critias with the latest parts of the Laws. In view of the small size of the Critias (11 pp. ed. Did.) a very great number of stylistic observations is required, and they ought to refer not only to the vocabulary but also to the construction of phrases, inversion of words, phonetic effects, and

all details which constitute the less accidental peculiarities of style. Only then will it be possible to decide with absolute certainty, on a basis of some thousand peculiarities resuming some hundred thousand observations, whether the Critias is contemporaneous with the latest parts of the Laws or not. Such a special investigation exceeds the limits of the present inquiry: the more so as the whole question has no philosophical importance. and claims only a purely literary interest. The Critias Divine contains no contribution to Plato's logic besides the incidental mention of the familiar view that knowledge has a divine origin (106 B: αὐτὸν (θεὸν) τελεώτατον καὶ ἄριστον φαρμάκων ἐπιστήμην εὐχόμεθα διδόναι), and the curious appreciation of the cosmogony of the Timaeus as acceptable only on account of human ignorance gave only about the gods and everything there expounded (107 AB: περί θεών . . . λέγοντά τι πρὸς ἀνθρώπους δοκείν ίκανώς λέγειν ράον ή περὶ θνητών πρὸς ήμας. ή γαρ απειρία καὶ σφόδρα άγνοια των ακουόντων περί ων αν ούτως έγωσι πολλήν εύπορίαν παρέγεσθον τω μέλλοντι λέγειν τι περί αὐτῶν).

nature of knowledge.

Timaeus a probable account of Divine things.

III. The Laws.

The question has been seriously discussed whether Supposed the theory of ideas is alluded to or maintained in the absence Laws. The question put in this indefinite manner is entirely out of place. Anybody who reads the Laws must notice the entire absence of the earlier theory of ideas as known from Phaedo and Republic. This has been recognised by all students of Plato, and Ribbing,267 who made a special study of the theory of ideas, went so far as to deny the authenticity of the Laws chiefly because he did not find there any trace of the Platonic ideas. Equally Ueberweg (Untersuchungen, p. 100) recognised that in the Laws the theory of ideas is nowhere

ideal theory.

267 S. Ribbing, Genetische Darstellung der Platonischen Ideenlehre, Leipzig 1863-64, vol. ii. pp. 150-190.

mentioned. The same has been the impression of English scholars. Grote (vol. iv. p. 275) and Jowett (vol. ii. p. 18; vol. v. p. ccxxxvi) agree that the theory of ideas is left out in the Laws. The same conclusion is reached by C. Ritter, in his recent commentary to the Laws,268 and Zeller also finds only one passage which could be interpreted as an allusion to the theory of ideas (Philosophie der Griechen, II. i. p. 953). This passage (965 c: προς μίαν ίδεαν εκ των πολλων και άνομοίων δυνατον είναι βλέπειν) is really as insufficient as evidence in favour of the old theory of ideas as similar passages from the earliest Socratic dialogues (Euthyph. 6 D: μιᾶ ἰδέα τά τε ἀνόσια ανόσια είναι). Also Susemihl, who maintained against Zeller that Plato remained faithful to his theory of ideas up to his latest age, acknowledged (Genetische Entwickelung, vol. ii. p. 577) that the idea of the good can be only guessed at in the passage concluding the dialogue.

not written for philosophers.

Generalisation.

It is very strange that in the whole discussion about the traces of the theory of ideas in the Laws nobody cared to distinguish between the earlier self-existing ideas and the ideas as known from the dialectical dialogues, where they appear as existing only in souls. Such ideas, The Laws equivalent to perfect notions, cannot have been abandoned by Plato, though he had no opportunity to mention them in the Laws, because the whole dialogue, like the Timaeus, rests on right and probable opinion, not on dialectical knowledge. Plato was not obliged to write always for philosophers alone, and he seems to have dedicated his latest years to a popular exposition of his political doctrines adapted to the actual level of mankind, very much below his own ideal standard. If somebody, like Grote, believes that Plato could become untrue to philosophy, he betrays only his own incapacity to judge a philosopher. Plato remained a philosopher up to his latest age, and the very last pages of the Laws prove it to

But Plato never

²⁰⁰ C. Ritter, Platos Gesetse, Kommentar sum griechischen Text, Leipzig 1896, p. 355.

any unprejudiced reader. The distinction between know- abanledge and opinion is one of those logical distinctions which, once reached, cannot be afterwards neglected by a true philosopher, and if Plato could be reasonably suspected of such a desertion, no hope is left for any one of a permanence of knowledge. Plato remains in all ages the ideal type of a philosopher, and philosophy which is not knowledge is nothing. Thus it is from the outset a Nor did he psychological impossibility to accept Grote's interpretation of Plato's silence about ideas in the Laws, according to which Plato contracted 'a comparative mistrust of any practical good to come from philosophy,' 'eliminating or reducing to a minimum that ascendency of the philosophical mind which he had once held to be omnipotent and indispensable.'

sophy.

mistrust philosophy, as Grote imagined.

Such extravagant conclusions are the result of a Plato's widespread error about Plato's philosophy, consisting in identifying the so-called 'theory of ideas' with Platonic philosophy and with his philosophical knowledge. We have seen above that no such identification results from a chronological survey of the development of Plato's logic. Even in the Republic the transcendental ideas do not include all the philosophy of Plato, and some of his 'theory logical doctrines have little to do with the world of ideas. The last appearance of such a world is in the *Phaedrus*. Already in the Theaetetus the categories occupy the place of ideas, which in the Parmenides also are supplanted by logical exercise in the analysis of notions. In the Sophist Plato speaks of his own earlier doctrine of ideas as belonging to the history of thought, and after the Sophist he never uses the terms elos and idéa in the meaning which they had in Phaedo, Republic, and Phaedrus. It becomes for him a cardinal truth of philosophy that ideas and reason exist only in souls, so that they cannot any longer be looked upon as independent substances, though they are always called True Being. Ideas are perfect notions and refer more espe-

philosophy has been too much identified with the so-called of ideas.'

cially to the natural kinds of animals in the largest meaning of this word (including plants) in all dialectical dialogues and also in the Timaeus. In this meaning alone we can expect to find them in the Laws, and in the only passage in which Plato mentions an idea in this dialogue (965 c), this is the only interpretation acceptable. A very strange prejudice is needed if we are to find everywhere the old supramundane ideas, where Plato speaks of an idea in a meaning which exactly corresponds to the use of this word in modern philosophy. It can only be recommended to all those who still have any doubts on this subject to read with the greatest attention what Campbell (Rep. II. pp. 294-321) wrote about the use of metaphysical terms by Plato. They will then see at once that no conclusion can be drawn from the use or absence of terms like sides or idéa which Plate borrowed from earlier writers and used himself in many different meanings, 'very seldom with a pronounced metaphysical intention' (p. 294). Plato's philosophy is not a mere theory of knowledge, and his theory of knowledge is not limited to the conception of ideas. The soul is not an idea, and acts a more important part in later Platonism than all ideas of Middle Platonism. It is the soul, and not the ideas, which is the central point of Plato's later theory of knowledge. Here it is expressly acknowledged that dialectical questions exceed the scope of the dialogue and the understanding of the hearers (892 E: νῦν ὁ μέλλων έστὶ λόγος σφοδρότερος καὶ σχεδὸν ἴσως ἄβατος ώς τη σφων ρώμη · μη δη σκοτοδινίαν ίλιγγόν τε υμίν έμποιήση παραφερόμενός τε καὶ ἐρωτῶν ἀήθεις ὄντας ἀποκρίσεων) and even a simple classification of psychical movement is followed immediately by the confession of both Kleinias and Megillus that they are unable to follow (644 D: μόγιο μέν πως εφέπομαι, λέγε μην το μετά ταθτα ώς έπομένου-καὶ ἐν ἐμοὶ μὴν ταὐτὸ τοῦτο πάθος ἔνι). Still, despite these limitations, we see here the theory of the soul made the object of a longer explanation, given in a more

The Soul
is the

theory of
knowledge.

popular tone than in the Phaedrus and Timaeus, where the same doctrines were already set forth, and resuming the conclusions reached in both these dialogues.

The old distinction made in the Phaedrus between Resumpthe self-moving principle and all other moving and moved objects of the universe is here again stated with great rhetorical strength and with all the absolute certainty that Plato attached to metaphysical truths. Once entered upon this argument the reader must notice Phaedrus. at once that he is outside the realm of probable opinions and plausible myths in the calm region of absolute knowledge which never changes. Material things move in space (893 c: ἐν χώρα τινὶ τά τε ἐστῶτα ἔστηκε καὶ τὰ κινούμενα κινείται . . . D: τὰ δέ γε κινούμενα ἐν πολλοίς . . όσα φορά κινείται μεταβαίνοντα είς έτερον ἀεὶ τόπον) and produce infinite appearances of growth and decay (893 E: συγκρινόμενα μεν αθξάνεται, διακρινόμενα δε φθίνει τότε. όταν ή καθεστηκυία εκάστων έξις διαμένη, μη μενούσης δε αὐτῆς δι' ἀμφότερα ἀπόλλυται). The material world is here pictured, in agreement with the Timaeus, as constantly becoming something else, never remaining the same (894 A : γίγνεται δή πάντων γένεσις, ήνίκ' αν τί πάθος continual ή; δήλου ώς όπόταν ἀρχὴ λαβοῦσα αὔξην εἰς τὴν δευτέραν change. έλθη μετάβασιν καὶ ἀπὸ ταύτης είς τὴν πλησίον, καὶ μέγρι τριών ελθούσα αἴσθησιν σχή τοις αἰσθανομένοις. μεταβιίλλου μεν οθν οθτω καὶ μετακινούμενον γίγνεται παν).

After an eloquent page on the movements forming the material universe (893 B-894 A) the Athenian guest reminds us in a very short phrase that True Being remains always the same (894 A: ἔστι δὲ ὄντως ὂν ὁπόταν μένη). This phrase is scarcely supposed to be understood by Kleinias and Megillus, but has an unmistakable same. meaning for those readers who remember the Timaeus. It means the world of eternal notions forming the system of human and divine knowledge. These notions are here as little as in any dialectical dialogue meant to exist as separate substances. They can only exist in

tion of the selfmoving principle of the

The material world subject to

True Being remains always the Priority
of soul.

Selfcausing movement the strongest.

souls, and a sample of such eternal knowledge is given in the following explanation of the priority of soul over matter, an important theorem of latest Platonism. starting point of this argument is an analysis of various kinds of motion, as in the Phaedrus. Among all possible movements, those caused from without must be distinguished from those which are their own cause, the latter being by far the strongest and most active movements (894 Β: ἔστω τοίνυν ή μεν ἔτερα δυναμένη κινείν κίνησις, έαυτην δε άδυνατούσα άει μία τις, ή δε έαυτην τ' άει και έτερα δυναμένη κατά τε συγκρίσεις έν τε διακρίσεσιν αύξαις τε καὶ τῷ ἐναντίφ καὶ γενέσεσι καὶ φθοραῖς ἄλλη μία τις αὖ τῶν πασῶν κινήσεων D: τίν' ἀν προκρίναιμεν ορθότατα πασών ερρωμενεστάτην τε είναι και πρακτικήν διαφερόντως; - μυρίφ ανάγκη που φάναι διαφέρειν την αὐτην αύτην δυναμένην κινείν, τὰς δὲ ἄλλας πάσας ὑστέρας).

This is shown more fully than in the *Phaedrus* to be a logical necessity.

The conception of a principle or beginning of movement is here more fully illustrated than in the Phaedrus, as a logical necessity (894 E: ὅταν ἄρα αὐτὸ αὑτὸ κινῆσαν ἕτερον άλλοιώση, τὸ δ' ἔτερον ἄλλο, καὶ οὕτω δὴ χίλια ἐπὶ μυρίοις γύγνηται τὰ κινηθέντα, μῶν ἀρχή τις αὐτῶν ἔσται τῆς κινήσεως άπάσης ἄλλη πλην ή της αὐτης αύτην κινησάσης μετα-To make it clearer to hearers who are not used to such metaphysical investigations, the Athenian guest supposes that before all physical movements began there may have been a time of immobility, and asks what kind of movement must have been the first movement in the universe. He answers that it could only be the movement of a self-moving principle, and calls it a logical necessity (895 A B: εἰ σταίη πως τὰ πάντα ὁμοῦ γενόμενα ἀνάγκη πρώτην κίνησιν γενέσθαι.. τὴν αὐτὴν κινοῦσαν · άρχην άρα κινήσεων πασών και πρώτην έν τε έστώσι γενομένην και εν κινουμένοις οδσαν την αυτην κινουσαν φήσομεν άναγκαίως είναι πρεσβυτάτην και κρατίστην μεταβολήν πασῶν). After such a decisive explanation of the nature of movement Plato proceeds exactly as in the Phaedrus to identify the soul with the self-moving principle. But

he introduces here a middle term which has not been mentioned in the Phaedrus, though already used in connection with the theory of the soul in the Phaedo and In these earlier dialogues life had been stated to be the characteristic distinction of the notion of soul. In the *Phaedrus* the soul was identified with a selfmoving principle. In the Laws, where the argument on the soul's priority and immortality is more minute and popular than either in the Phaedrus or in the Phaedo, Life the Plato combines both trains of argument and uses the notion of life as a link between 'self-moving principle' and 'soul' (895 c : ζην αὐτὸ προσεροῦμεν, ὅταν αὐτὸ αὑτὸ κινή). What moves itself, lives, and what lives is animated, or has a soul (895 c: ὁπόταν ψυχὴν ἔν τισιν ὁρῶμεν οὐκ principle άλλο ή ταὐτὸν τούτω ζην όμολογητέον).

middle term between selfmoving and Soul.

It results from the above that the soul is identical with a self-moving principle, being indeed only a name for what is thus defined (896 A: δ δή ψυχή το ὕνομα, τίς τούτου λόγος; έχομεν ἄλλον πλην τον νῦν δη ρηθέντα, την δυναμένην αὐτὴν αὐτὴν κινείν κίνησιν; . . . εἰ δ' έστι τοῦτο ούτως έχον, ἄρα έτι ποθοῦμεν μὴ ίκανῶς δεδείχθαι ψυγην ταυτον ον και την πρώτην γένεσιν και κίνησιν . . . , ἐπειδή γε ἀνεφάνη μεταβολής τε καὶ κινήσεως ἁπάσης αἰτία άπασιν; . . . ίκανώτατα δέδεικται ψυχὴ τῶν πάντων πρεσβυτάτη, φανείσά γε ἀρχὴ κινήσεωs). The proof is held sufficient, both by teacher and pupil, and we see in Traces of this passage that Plato had lost nothing of his proud unabated philosophical certainty so far as metaphysical truth was confidence concerned, even after all political disillusions, and in his in metalatest age, when he wrote the tenth book of his Laws for physical vulgar readers and citizens.

Without going so far as the Neoplatonists in their suspicions and guesses about a secret doctrine, we are led by a consideration of the whole of Plato's literary legacy to believe that he did not care to leave in writing his answer to all the most difficult problems of philosophy. Even the Laws, the largest of his works, representing Protreptic character of earlier writings continued in the Laws.

a conversation which must have lasted a whole very long summer day—the Laws, which in our editions forms a volume of over four hundred pages of close printingmaintain the protreptic character of earlier writings, and appear to have been written as a voluminous programme of the Academy, in order to attract future lawgivers to Such at least is the impression Plato's oral lessons. produced by the concluding pages of this long dialogue. Here the fiction of the dialogue seems to disappear, and Plato exalts his school in such an unmistakable manner that no doubt can be left who the Athenian philosopher is: no one in all the world could speak in this way save the first Master of the Academy. He says that he can supply from among his pupils men qualified as leaders for any state, and that he has in these things unusual experience and knowledge (968 B: ξυλλήπτωρ τούτου γε ύμιν καὶ ἐγὰ γυγνοίμην ᾶν προθύμως, πρὸς δ' ἐμοὶ καὶ ἐτέρους ίσως εύρήσω διὰ τὴν περὶ τὰ τοιαῦτ' ἐμπειρίαν τε καὶ σκέψιν γεγονυιάν μοι καὶ μάλα συχνήν).

The philosopher is still the only legislator.

It has been clearly expressed in the preceding passage that such leaders of men can be only dialecticians or philosophers who are able to unite into one whole all knowledge, to apply it harmoniously to the aims of life, and to show the reason of everything that is reasonable (967 E). Whoever is not able to comply with these conditions, however he may have reached a high level of virtue. ought to obey, not to command, and this refers to any given state, not only to the ideal state of the Republic (968 A : ὁ δὲ μὴ ταῦθ' οδός τ' ὧν πρὸς ταῖς δημοσίαις άρεταῖς κεκτήσθαι σχεδον άρχων μέν ούκ άν ποτε γένοιτο ίκανος όλης πόλεως, ὑπηρέτης δ' αν άλλοις άρχουσιν. Cf. 969 B: ἐάν γε μην ούτος ημίν ο θείος γένηται ξύλλογος, παραδοτέον τούτω την πόλιν, αμφισβήτησίς τ' οὐκ ἔστ' οὐδεμία οὐδενὶ τῶν νθν παρά ταθθ' ώς έπος είπειν νομοθετών, όντως δε έσται σγεδον υπαρ αποτετελεσμένον, οδ σμικρώ πρόσθεν ονείρατος δε τῷ λόγφ ἐφηψάμεθα, κεφαλής νοῦ τε κοινωνίας εἰκόνα τινά πως ξυμμίξαντες, έαν άρα ημίν οί τε άνδρες άκριβώς

έκλεχθωσι, παιδευθωσί τε προσηκόντως, παιδευθέντες τε έν άκροπόλει της χώρας κατοικήσαντες φύλακες άποτελεσθώσιν, οίους ήμεις ούκ είδομεν εν τώ πρόσθεν βίω προς άρετην σωτηρίας γενομένους).

But, as in the Republic, Plato declines to explain Plato's the highest knowledge in the present dialogue, and he last repeats at the end of his life the same conviction which witten he expressed about thirty years earlier in the Phaedrus, when he had just completed some of his most brilliant exalts It would be a vain task to set down in writing oral above the highest knowledge, because this can be only im- written planted in living souls, and would lose all its power teaching. if fixed in a literary work (968 D E: πρὸς τούτοις δὲ γρόνους ούς τε καὶ ἐν οίς δεὶ παραλαμβάνειν ἔκαστα, μάταιον ταῦτ' ἐν γράμμασι λέγειν· οὐδὲ γὰρ αὐτοῖς τοῖς μανθάνουσι δήλα γίγνοιτ' άν, ο τι πρὸς καιρὸν μανθάνεται, πρὶν ἐντὸς τῆς ψυχῆς ἐκάστω τοῦ μαθήματος ἐπιστήμην γεγονέναι). Thus the highest summit of political training and knowledge is not to be foretold, as Plato explains, playing upon words in his usual fashion and inventing a new term for the purpose (968 Ε: οὖτω δὴ πάντα τὰ περὶ ταῦτα ἀπόρρητα μὲν λεχθέντα οὐκ ἃν ὀρθῶς λέγοιτο, άπρόρρητα δὲ διὰ τὸ μηδὲν προρρηθέντα δηλοῦν τῶν The careful consideration of this passage, λεγομένων). one of the last pages written by Plato, must be emphatically recommended to all those who believe that the judgment on writing and literature expressed in the Phaedrus is a mark of youthfulness, and could not well fit the author of the Republic after he had composed this literary masterpiece. It is exceedingly important for a right understanding of Plato's writings to keep constantly in mind the protreptic character of all his works.

In this light it becomes also evident why, though we do not find in the Laws many traces of logical theories expressed earlier, these theories are by no means abandoned, only omitted as out of place in a very popular work. The theory of the soul, which finds in the Laws

again

Repetition of earlier state ments. Theory of the Soul.

an exceptionally large place, is the best measure of Plato's latest metaphysical convictions and shows that they have not been essentially altered since the Sophist. Plato complains that nobody before him has sufficiently investigated the nature of the soul, or recognised its priority (892 A : ψυχὴν ἠγνοηκέναι κινδυνεύουσι μὲν ὀλίγου Εύμπαντες, οδόν τε δν τυγχάνει καὶ δύναμιν ην έχει, των τε άλλων αὐτῆς πέρι καὶ δὴ καὶ γενέσεως, ώς ἐν πρώτοις έστι σωμάτων έμπροσθεν πάντων γενομένη και μεταβολής τε αὐτῶν καὶ μετακοσμήσεως άπάσης ἄρχει παντὸς μᾶλλον, cf. 967 D: ψυχή ἐστι πρεσβύτατον ἀπάντων ὅσα γονῆς μετείληφεν αθάνατόν τε άρχει τε δή σωμάτων πάντων). The soul, with all its manifestations, as will, reason, opinion, memory, is not only earlier than the material world with the three dimensions of space and the forces acting in it (896 c D: τρόποι δὲ καὶ ήθη καὶ βουλήσεις καὶ λογισμοί και δόξαι άληθεις επιμέλειαι τε και μνημαι πρότερα μήκους σωμάτων καὶ πλάτους καὶ βάθους καὶ ρώμης είη γεγονότα ἄν, εἴπερ καὶ ψυγή σώματος), but also the true cause of all material and moral existence (896 D: ¿uoλογείν ἀναγκαίον τῶν τε ἀγαθῶν αἰτίαν είναι ψυχὴν καὶ τών κακών και καλών και αίσχρών δικαίων τε και άδίκων και πάντων τῶν ἐναντίων, εἴπερ τῶν πάντων γε αὐτὴν θήσομεν αἰτίαν).

This refers primarily, as in the Timaeus, to the world's soul, with the difference that the plurality of souls is here more insisted upon. Already in the Timaeus a plurality of perfect souls was affirmed on account of the perfection visible in the stars; here another reason is brought forward for a plurality of souls, which reminds us of the discussion in the Parmenides about the difference between human and divine notions. Plato refrains from ascribing imperfection to perfect souls, and as he cannot accept every detail of Being as perfect, he wants at least two souls to explain the universe, and generally speaking, a plurality of souls (896 E: ψυχὴν δὴ διοικοῦσαν καὶ ἐνοικοῦσαν ἐν ἄπασι τοῖς πάντη κινουμένοις . . . καὶ τὸν

Plurality of souls: perfect and imperfect. οὐρανὸν ἀνάγκη διοικεῖν φάναι . . . μίαν ἡ πλείους; -- πλείους . έγω ύπερ σφων αποκρινούμαι. δυοίν μέν γέ που έλαττον μηδεν τιθώμεν, της τε εὐεργέτιδος καὶ της τάναντία δυναμένης ἐξεργάζεσθαι). This passage has been generally interpreted as implying a dualism contradictory to Plato's earlier doctrines. But there is no need for such an interpretation, if we can take it literally and find it in general agreement with the Timaeus. Plato does not say that there are two world souls, two opposed principles like those in the Persian religion. He says only that if perfection is opposed to imperfection, imperfection cannot be ascribed to a perfect soul, and to account for it at least one imperfect soul is needed besides the perfect soul which is the source of perfection. This minimal number of two souls is only introduced for the sake of argument, the conclusion being stated clearly at the outset: a plurality of souls. This agrees with the plurality of unequal souls as represented in the Timaeus, and only the argument of imperfection as proof of plurality is new.

That Plato by no means abandoned his views on the fundamental unity of the universe as set forth in the Timaeus can be clearly seen from many passages in the Laws, and specially from his increasing reverence for divine Providence which is evident at every step of the argument. For the sake of the popular character of his exposition he generally speaks of a plurality of Gods, according to the use of language and the prevailing religious conviction of his hearers. But occasionally the One God almighty Demiurge reappears under the name of $\theta_{\epsilon \acute{o}s}$ or supreme. of vovs. That the term δημιουργόs is no longer applied to the highest Divinity may be explained by the increasing awe of Plato for the highest soul, which he dares not now compare, as in the Timaeus, with other agencies. But he maintains the conception of such a soul (898 c: apiorn ψυχή), reigning over a whole hierarchy of Gods down to each man's individual soul, and even below. It is no longer a God abiding after creation in his eternal peace,

but the true image of Providence which remained in all later religions, being a conception far transcending the natural limits of Greek mythology.

New conception of Providence.

Above the blind necessity of Homer, Plato's genius raised a new idea of the almighty leader of the whole universe, who orders every detail in it according to the aims of the whole (903 B: τω του παντός επιμελουμένω προς την σωτηρίαν και άρετην του όλου πάντ' έστι συντεταγμένα, ὧν καὶ τὸ μέρος εἰς δύναμιν ἔκαστον τὸ προσῆκον πάσχει καὶ ποιεί τούτοις δ' είσὶν ἄρχοντες προστεταγμένοι εκάστοις επὶ τὸ σμικρότατον ἀεὶ πάθης καὶ πράξεως, είς μερισμόν τὸν ἔσγατον τέλος ἀπειργασμένοι . .). While the individual souls wander from one life to another, it remains the task of God to fix for each soul its proper place of activity according to its merits or sins (903 D: ἐπεὶ δὲ ἀεὶ ψυχή συντεταγμένη σώματι τοτε μεν άλλω τοτε δε άλλω, μεταβάλλει παντοίας μεταβολας δι' έαυτην η δι' έτέραν ψυχήν,269 οὐδεν ἄλλο ἔργον τῷ πεττευτή λείπεται πλην μετατιθέναι τὸ μὲν ἄμεινον γιγνόμενον ήθος είς βελτίω τόπου, γείρου δε είς του γείρουα, κατά τὸ πρέπου αὐτῶν ἔκαστου, ἵνα τῆς προσηκούσης μοίρας λαγχάνη).

In heaven and on earth the movements of the soul are the first causes of all physical movements, the soul being governed either by divine reason or folly (896 Ε: ἄγει μὲν δὴ ψυχὴ πάντα τὰ κατ' οὐρανὸν καὶ γῆν καὶ βάλατταν ταῖε αὐτῆε κινήσεσιν ... 897 Α: πάσαιε ὅσαι ... τὰε κινήσειε σωμάτων ἄγουσι πάντα ... Β: οἶε ψυχὴ χρωμένη νοῦν μὲν προσλαβοῦσα αἰεὶ θεῖον ὀρθῶε θέουσα, ὀρθὰ καὶ εὐδαίμονα παιδαγωγεῖ πάντα, ἀνοία δὲ ξυγγενομένη πάντα αὖ τἀναντία τούτοιε ἀπεργάζεται). The most perfect souls are Gods whose bodies we see in the shape of stars. Those perfect movements can be produced only by perfect souls (899 Β: ἄστρων πέρι πάντων . . . ἐροῦμεν . . . ώε ἐπειδὴ ψυχὴ μὲν ἡ ψυχὰ πάντων τούτων αἴτιαι ἐφάνησαν, ἀγαθαὶ δὲ πᾶσαν

²⁶⁹ Here appears for the first time the conception of a direct action of one soul on another, which anticipates modern theories of telepathy.

άρετήν, θεούς αὐτὰς είναι φήσομεν, είτε ἐν σώμασιν ἐνοῦσαι, ζώα όντα, κοσμούσι πάντα ούρανον είτε όπη τε καὶ όπως, cf. 966 E, 967 D). God being the true measure of all things (716 c: ὁ θεὸς ἡμῖν πάντων χρημάτων μέτρον αν εἴη μάλιστα), it is the common aim of all souls to become as similar to Him as possible (716 c: τὸν οὖν τῷ τοιούτω προσφιλή γενησόμενον είς δύναμιν ο τι μάλιστα καὶ αὐτὸν τοιοῦτον άναγκαΐον γίγνεσθαι).

While Plato thus raises the conception of Divinity God the above all earlier standards, he does not deprive the true individual human soul of its powers and responsibilities. After the Gods, there is nothing in the universe so divine as human souls, which are the nearest to divinity (726 E: πάντων κτημάτων μετά θεούς ψυχή θειότατον, οἰκειότατον ου, cf. 728 B, 731 C: ψυχη πᾶσι τιμιώτατον, cf. 966 E). And the soul has power also to err, and is the cause of its own faults (727 Β : τῶν ἁμαρτημάτων αἴτιον . . . καὶ τῶν πλείστων κακών καὶ μεγίστων). Different kinds of life depend upon the variety of souls and their faculties (803 AB: τὰ τῶν βίων σχήματα διαστήσασθαι κατὰ τρόπους τοὺς τῶν ψυγῶν ὄντως αὐτῶν τὰ τροπιδεῖα καταβάλλεσθαι, ποία μηγανή καὶ τίσι ποτὲ τρόποις ξυνόντες τὸν βίον ἄριστα διὰ τοῦ πλοῦ τούτου της ζωης διακομισθησόμεθα, τοῦτο σκοπεῖν ὀρθώς).

The philosopher is looking upon human life from Life not a very exalted point of view, and with almost infinite to be horizons before his mind, as if he dwelt already in a better taken too place than this earth. He occasionally goes so far as to question whether human life is altogether to be taken seriously, comparing it with a stage performance in which each of us may be looked upon as a puppet of the Gods. perhaps a plaything only pulled by various cords and strings in different ways (644 D : θαθμα μὲν ἕκαστον ἡμῶν ήγησωμεθα των ζώων θείου, είτε ώς παίγνιου εκείνων είτε ώς σπουδή τινὶ ξυνεστηκός οὐ γὰρ δὴ τοῦτό γε γιγνώσκομεν, τόδε δὲ ἴσμεν, ὅτι ταῦτα τὰ πάθη ἐν ἡμῖν οίον νεῦρα ἡ μήρινθοί τινες ένουσαι σπώσί τε ήμας και άλλήλαις άνθέλκουσιν έναντίαι οδσαι έπ' έναντίας πράξεις, οδ δή διωρισμένη άρετή

of all things, not Man.

seriously.

καὶ κακία κεῖται, cf. 803 c). From the philosopher's standpoint human cares and struggles have not all the importance attached to them by those concerned; still he recommends that they should be met with due earnestness as long as we are here, and that we should play our part as we are expected to do (803 B: ἔστι δὴ τοίνυν τὰ τῶν ἀνθρώπων πράγματα μεγάλης μὲν σπουδῆς οὐκ ἄξια, ἀναγκαῖόν γε μὴν σπουδάζειν τοῦτο δὲ οὐκ εὐτυχές ἐπειδὴ δὲ ἐνταῦθά ἐσμεν, εἴ πως διὰ προσήκοντός τινος αὐτὸ πράττοιμεν, ἴσως ὰν ἡμῖν σύμμετρον ὰν εἴη).

He complains that most men ignore the relative

Seriousness of noble pastime.

importance of human things, and take seriously what does not deserve their attention, while they play with things which ought to be taken very seriously (803 c: φημί χρηναι τὸ μεν σπουδαίον σπουδάζειν, τὸ δὲ μή σπουδαίον μή . . . τούτφ δη δείν τῷ τρόπφ ξυνεπόμενον καὶ παίζουτα ο τι καλλίστας παιδιάς πάντ' άνδρα καὶ γυναῖκα ούτω διαβιώναι, τούναντίον ή νῦν διανοηθέντας). nature if left to itself easily degenerates (713 c: ἀνθρωπεία φύσις οὐδεμία ίκανη τὰ ἀνθρώπινα διοικοῦσα αὐτοκράτωρ πάντα μη οὐχ ὕβρεώς τε καὶ ἀδικίας μεστοῦσθαι). But there are always found in the crowd a few divine men, whose character is independent of all outward influences: these are worth seeking over sea and land, and their experience and knowledge are valuable in any state (951 B: είσλ γὰρ ἐν τοίς πολλοίς ἄνθρωποι ἀεὶ θείοί τινες, οὐ πολλοί, παντὸς δ' άξιοι ξυγγίγνεσθαι, φυόμενοι ούδεν μάλλον εν εύνομουμέναις πόλεσιν ή και μή, ων κατ' ίγνος ἀεί γρη τὸν ἐν ταίς εὐνομουμέναις πόλεσιν οἰκοῦντα, ἐξιόντα κατὰ θάλατταν καὶ γῆν, ζητείν δε αν αδιάφθαρτος ή, cf. Phaedo 78 A). The best men ought to be followed always (728 c), and the worst punishment is to become similar to the worst men (728 B: την γάρ λεγομένην δίκην της κακουργίας την μεγίστην οὐδείς . . . λογίζεται, έστι δ' ή μεγίστη τὸ ὁμοιοῦσθαι τοῖς οὖσι κακοῖς άνδράσιν . . . προσπεφυκότα δε τοις τοιούτοις άνάγκη ποιείν καὶ πάσχειν α πεφύκασιν άλλήλους οί τοιοῦτοι ποιείν καὶ λέγειν, cf. Theaet. 177 A).

The best security lies in following the good and wise. The worst punishment is

Against the vulgar worship of wealth, Plato protests with his wonted vehemence, saving that all the gold on earth, added to all the treasures hidden underground, can never equal the value of virtue (728 A: πâs γàρ ő τ' ἐπὶ γης καὶ ὑπὸ γης χρυσὸς ἀρετης οὐκ ἀντάξιος). The greatest danger to the soul's growth and the source of all its errors of wealth is the wrong popular belief that each man is nearest to and of himself, and the wicked love of self (731 Ε: πάντων δὲ μέγιστον κακών ανθρώποις τοις πολλοίς έμφυτον έν ταίς ψυχαις έστίν, οδ πας έαυτώ συγγνώμην έχων αποφυγήν ούδεμίαν μηγαναται τοῦτο δ' ἔστιν δ λέγουσιν ώς φίλος αύτῷ πας άνθρωπος φύσει τ' έστὶ καὶ ὀρθώς έχει τὸ δείν είναι τοιοῦτον. τὸ δὲ ἀληθεία γε πάντων άμαρτημάτων διὰ τὴν σφόδρα έαυτοῦ φιλίαν αἴτιον έκάστω γίγνεται έκάστοτε). Each man should love just actions wherever he meets them (732 A: ούτε έαυτον ούτε τὰ έαυτού χρη τόν γε μέγαν ἄνδρα ἐσόμενον στέργειν, άλλὰ τὰ δίκαια, ἐάν τε παρ' αὐτῷ ἐάν τε παρ' ἄλλω μαλλον πραττόμενα τυγχάνη). It is thoroughly characteristic of a time when Plato no longer admitted the ideas as substances, that he speaks on that occasion of just actions, and not of absolute justice or of the idea of the just. The ruling notions of later Platonism are the soul and justice activity or movement. The world is represented as a struggle of souls, each of them striving to advance by the love of those who are better and farther ahead on the way to perfection (732 B: πάντα ἄνθρωπον χρὴ φεύγειν τὸ σφόδρα φιλείν αύτόν, τον δ' ξαυτοῦ βελτίω διώκειν δεί, μηδεμίαν αἰσχύνην ἐπὶ τῷ τοιούτῳ πρόσθεν ποιούμενον). The close relation of each person to the highest divinity and power of the leading Providence is illustrated by the assertion that even chance is directed by the divine will, and is to fails, as be trusted when human reason fails (690 c: θεοφιλή δέ γε καὶ εὐτυχή τινὰ λέγοντες . . . εἰς κλήρον τινα προάγομεν καί λαγόντα μεν ἄρχειν, δυσκληροῦντα δε ἀπιόντα ἄρχεσθαι τὸ δικαιότατον είναί φαμεν).

It is evident that in this realm of souls directed by No room divine Providence, and acting on matter as well as on for

separate ideas.

each other, there is no room for self-existing substantial Ideas continue to be called true Being (894 A: ουτως ου), but their only Being, here as in all the dialectical dialogues, is truly in a soul of some kind, so that the substantial existence of an infinity of souls, affirmed in the Laws as well as in the Timaeus, throws a new light on the correctness of our interpretation of that famous passage of the Sophist (249 A) which gave rise to the strange conception of animated ideas. The truth is that for Plato in his later works παντελώς ὄν corresponded rather to the soul than to the ideas contained in the soul.

Unity of consciousness: subdivision of faculties.

The unity of consciousness, known from the Theaetetus, is here reasserted (644 c : ένα μὲν ἡμῶν ἔκαστον αὐτῶν τιθῶμεν) and the subdivision of the faculties of the soul is carried farther than in the Republic and Phaedrus. The lowest stage is pleasure and pain, two opposite advisers both deprived of reason (644 c: δύο δὲ κεκτημένον έν αύτω ξυμβούλω έναντίω τε καὶ ἄφρονε, ω προσαγορεύομεν ήδουὴν καὶ λύπην). These two movements of the soul (896 E) are the earliest in the development of man and begin in childhood (653 A: λέγω τοίνυν τῶν παίδων παιδικήν είναι πρώτην αϊσθησιν ήδου ην και λύπην, και έν οίε άρετη ψυγή καὶ κακία παραγίγνεται πρώτον, ταθτ' είναι); they correspond to the worst part of the soul as represented in the Republic and Phaedrus, except that Plato substitutes here as in the Timaeus the two opposite notions of pleasure and pain for the earlier ἐπιθυμητικόν of the Republic, which had been still alluded to in the Timaeus as combined with the sensations of pleasure and pain (Tim. 77 B: αἰσθήσεως ἡδείας καὶ ἀλγεινῆς μετὰ ἐπιθυμιῶν).

Pleasure and pain, replacing desire.

Also the faculty of the nobler feelings, designated The earlier by the term θυμοειδές, is now subdivided and emotions reduced to the opposites of fear and confidence, both being defined as expectancy or opinions about the future (644 D: δόξας μελλόντων, οίν κοινον μεν δυομα έλπίς, ίδιον θυμοειδές. δὲ φόβος μὲν ή πρὸ λύπης ἐλπίς, θάρρος δὲ ή πρὸ τοῦ ἐνα-Fear and

higher replace the

υτίου). This is also called θυμός, and like desire is equally confideprived of reason (863 B: θυμός, δύσερι καὶ δύσμαγον dence. κτημα έμπεφυκός, άλογίστω βία πολλά άνατρέπει), and different from pleasure (863 B: ήδονήν γε οὐ ταὐτὸν τῶ θυμφ προσαγορεύομεν, εξ έναντίας δε αὐτῷ φαμεν ρώμης δυναστεύουσαν πειθοί μετὰ ἀπάτης βιαίου πράττειν, ὅ τί περ $\hat{a}\nu$ $a\dot{\nu}\tau\hat{\eta}s$ $\hat{\eta}$ βούλησις $\hat{\epsilon}\theta\epsilon\lambda\hat{\eta}\sigma\eta$). Once called a state or Various part of the soul (863 Β: ἐν μὲν ἐν ψυχῆ τῆς φύσεως εἴτε moveτι πάθος είτε τι μέρος ῶν ὁ θυμός), this faculty is generally included among the soul's movements, which are enumerated without any systematic order in the important passage in which the priority of the soul's movement is by Reason. reasserted (897 A: ψυχης κινήσεσιν δνόματά έστι βούλεσθαι, σκοπείσθαι, ἐπιμελείσθαι, βουλεύεσθαι, δοξάζειν ὀρθώς, έψευσμένως, χαίρουσαν, λυπουμένην, θαρρούσαν, φοβουμένην, μισοῦσαν, στέργουσαν).

ments of the Soul, to be directed

All these movements ought to be directed by the highest faculty of reason, which alone is able to decide about their value (644 D : ἐπὶ δὲ πᾶσι τούτοις λογισμός, ὅ τί ποτ' αὐτῶν ἄμεινον ἡ γείρου). It is one of the strangest errors of a purely philological interpretation of Plato, that some authors believed themselves to find evidence in the Laws for affirming such a radical change in Plato's convictions as would have been implied by the identification of true opinion and knowledge. Even Hermann, despite his great knowledge of Plato, says in a note (p. 709, note 737), Knowas if it were an indifferent observation, that the Laws ledge imply an entire absence of the earlier conception of knowledge, which now appears to be identified with true tisted opinion. If this were true, then the Laws could not be from right authentic. For a philosopher who once recognised the opinion. existence of knowledge above all opinions cannot return to the vulgar faith of the multitude. From the standpoint of philological or literary interpretation it might seem a very irrelevant question, but for the historian of logic it is the most important point in Platonism and the greatest merit of Plato that he distinguished invariable

differen-

knowledge from changing opinion and found permanence of ideas in the waves of appearances. Hermann was misled by Plato's complaint about the scarcity of reason in human life (875 D: νοῦς . . . οὐκ ἔστιν οὐδαμοῦ οὐδαμῶς, άλλ' ἢ κατὰ βραγύ). But if in practical life and for practice a great scarcity might be equivalent to entire non-existence, there is an infinite difference between the two for the Reason is scarce, but scarce as it is, it is recoglogician. nised by Plato as the only trustworthy leader in our life, the golden thread which unites us with God (644 E: µiâ γάρ φησιν ο λόγος δείν των έλξεων ξυνεπόμενον ἀεὶ καὶ μηδαμή ἀπολειπόμενον ἐκείνης ἀνθέλκειν τοῖς ἄλλοις νεύροις έκαστον, ταύτην δ' είναι τὴν τοῦ λογισμοῦ ἀγωγὴν χρυσῆν καὶ ἱεράν).

νοῦς and φρόνησις.

It may have misled Hermann and some other readers that Plato often uses in the Laws the term poounges in a sense which is equivalent to vovs. But this use is by no means limited to the Laws, and is to be found already in the Phaedo (79 D). In the Symposium Φρόνησις (202 A) was opposed to ἀμαθία, and in the Republic it is sometimes equivalent to Science or Knowledge (496 A). If Plato sometimes enumerates φρόνησιs or ἐπιστήμη together with δόξα (645 Ε: αἰσθήσεις καὶ μνήμας καὶ δόξας καὶ φρονήσεις), this does not mean that he abandoned the distinction between opinion and knowledge, but only that both are opposed to indefinite feelings (645 D: ήδονας και λύπας και θυμούς και έρωτας). Once δόξα is named between ἐπιστήμη and λόγος (689 Β: ὅταν οὖν ἐπιστήμαις ἡ δόξαις ἡ λόγφ ἐναντιῶται, τοῖς φύσει άργικοίς, ή ψυχή, τοῦτο ἄνοιαν προσαγορεύω). But even this proves only that opinion is held to be different from knowledge. It is the ruling faculty for the great majority; because Plato here as in his earlier writings does not expect to find knowledge and science in every citizen. He said already in the Meno that for the practical life right opinion is sufficient; in the Politicus he sees the aim of the rulers in implanting right opinions in

the souls of the people, and this remains his aim in the Laws. He does not even pretend that all the laws proposed have the character of permanent knowledge. The Law delaws are a matter of opinion generally and should be pends on tested by experience (769 D: πρῶτον γράψαι τοὺς νόμους opinions προς την ακρίβειαν κατά δύναμιν ίκανως · έπειτα προϊόντος and exτοῦ γρόνου καὶ τῶν δοξάντων ἔργω πειρώμενον ἄρ' οἴει τινα ούτως άφρονα γεγονέναι νομοθέτην, ώστ' άγνοείν, ότι πάμπολλα ἀνάγκη παραλείπεσθαι τοιαῦτα, α δεί τινα ξυνεπόμενον ἐπανορθοῦν). It is impossible to foresee everything in legislation (875 D: τὸ δεύτερον αίρετέον, τάξιν τε καὶ νόμον, α δη το μεν ώς έπι το πολύ ορά και βλέπει, το δ' ἐπὶ πᾶν ἀδυνατεῖ) and time alters opinions (888 B: προϊών δέ σε ο χρόνος ποιήσει πολλά ών νῦν δοξάζεις μεταβαλόντα ἐπὶ τάναντία τίθεσθαι).

That in the Laws, as in the Timaeus, plausible opinions are chiefly expressed, is caused by the subjects dealt with in these works, and does not change anything in the immense distance between opinion and knowledge in Plato's mind. He states this difference on every opportunity in the most emphatic way. Nothing is exalted But Law above knowledge and reason, nor can they be subordinated to any political considerations, because science and reason, whenever they are found, overrule every law and tradition (875 c: ταῦτα εἴ ποτέ τις ἀνθρώπων φύσει ἱκανός, θεία μοίρα γεννηθείς, παραλαβείν δυνατός είη, νόμων οὐδὲν ἃν δέοιτο τῶν ἀρξόντων ἐαυτοῦ επιστήμης γὰρ οὖτε νόμος οὖτε τάξις οὐδεμία κρείττων, οὐδὲ θέμις ἐστὶ νοῦν ούδενδε ύπήκοον ούδε δούλον άλλα πάντων άργοντα είναι. εάνπερ άληθινος ελεύθερος τε όντως ή κατά φύσιν). Truth leads Gods and men (730 c: ἀλήθεια πάντων μὲν ἀγαθῶν θεοις ήγειται, πάντων δε ανθρώποις). In such things as This, practical regulations of political life complete truth is a divine privilege (641 D: τὸ μὲν ἀληθὲς διισχυρίζεσθαι ταθτα ούτως έγειν, πολλών αμφισβητούντων, θεού), and always very difficult to attain for men (804 B: θαύματα attain. όντες τὸ πολύ, σμικρά δὲ ἀληθείας άττα μετέγοντες), equally

itself is overruled by Reason.

however, is a height which few men can

difficult to impart to others (968 D: à δεὶ μανθάνειν, οὔτε εύρειν ράδιον ούτε εύρηκότος άλλου μαθητήν γενέσθαι). difficulty is not impossibility, and Plato most certainly claimed to possess full knowledge on such matters as the priority of the soul before matter in the universe. peatedly contrasted also in the Laws truth and knowledge with right opinion and experience (632 c: ὁ θελς τους νόμους απασι φύλακας επιστήσει, τούς μεν διά φρονήσεως, τοὺς δὲ δι' ἀληθοῦς δόξης ἰόντας, ὅπως πάντα ταῦτα ξυνδήσας ὁ νο θς επόμενα σωφροσύνη καὶ δικαιοσύνη ἀποφήνη, άλλὰ μὴ πλούτω μηδὲ φιλοτιμία.-668 Α: οὐκ εἴ τω δοκεῖ ήδύ ή τις γαίρει τω, τό γε ίσον ίσον ούδε το σύμμετρον άν είη σύμμετρον όλως, άλλὰ τῷ άληθεῖ πάντων μάλιστα, ἤκιστα δὲ ότωοῦν ἄλλω-720 CD: ὁ δοῦλος προστάξας αὐτῷ τὰ δόξαντα έξ έμπειρίας, ώς ἀκριβώς είδώς, καθάπερ τύραννος . . . ό δὲ ἐλεύθερος . . . ἐπισκοπεῖ . . . μανθάνει . . . διδάσκει).

Opinion and knowledge are repeatedly contrasted.

Opinion is based on sensible experience, reason like the soul in which it is contained remains unattainable to the senses, and can be grasped only by our invisible thought (897 D E: μη ποιησώμεθα την απόκρισιν, ώς νοῦν ποτὲ θνητοίς όμμασιν όψόμενοί τε καὶ γνωσόμενοι ίκανῶς-898 D E: τὸ γένος ημίν τοῦτο ἀναίσθητον πάσαις ταῖς τοῦ σώματος αισθήσεσι περιπεφυκέναι, νοητον δ' είναι νῷ μόνφ). Opinions are held by children, knowledge or right opinion founded on reason can be reached only late in life, and by few happy men (653 A: φρόνησιν δὲ καὶ ἀληθεῖς δόξας βεβαίους, εὐτυχὲς ὅτφ καὶ πρὸς τὸ γῆρας παρεγένετο, cf. Theaet. 186 c). The truth carries all advantages with it (667 c: τὴν ὀρθότητα καὶ τὴν ἀφέλειαν καὶ τὸ εὖ καὶ τὸ καλώς την άληθειαν είναι την άποτελούσαν), and wisdom is the highest good (631 c : δ πρώτον τών θείων ήγεμονοῦν ἐστὶν ἀγαθῶν, ἡ φρόνησις). The power of reasoning acts without either constraint or violence (645 A: λογισμοῦ καλοῦ μεν όντος, πράου δε και οὐ βιαίου-690 c: τὸν φρονοῦντα ἡγεῖσθαί τε καὶ ἄρχειν . . . κατὰ φύσιν τὴν τοῦ νόμου ἐκόντων ἀρχὴν ἀλλ' οὐ βίαιον πεφυκυίαν).

Even here, where as little opportunity as anywhere is Particugiven for logical theories, Plato insists upon the unity of lars are science, and shows how each particular detail is connected with the most general views on the whole (857 c D, cf. Phaedr. 270 c). He illustrates it by the familiar example of the difference between an ordinary medical practitioner The true and a true physician, the first being like a slave, and lawgiver the second a philosopher, inquiring into the nature of has all bodies (720 D) in order to heal a particular illness. grasped Equally the lawgiver is asked to write not only for a present purpose, but to prepare a general view of law (858 c: σύνοψις τῶν νόμων), and to know wherein consists the unity of virtue (965 D: ἀναγκαστέον . . . φύλακας άκριβως ίδειν πρωτον, δ τί ποτε διά πάντων των τεττάρων ταὐτὸν τυγγάνει, δ δή φαμεν έν τε ἀνδρεία καὶ σωφροσύνη καὶ δικαιοσύνη καὶ ἐν Φρονήσει ἐν ον ἀρετὴν ἐνὶ δικαίως αν ονόματι προσαγορεύεσθαι).

As to the order of sciences, mathematics and astronomy are here also recommended as introductory to dialectic, which is alluded to only in a general way, as Distant the hearers are supposed not to be trained for dialectical allusion conversations. Once the term τὰ κάλλιστα μαθήματα to dia-(818 D) is applied to dialectical science. Also the wellknown dialectical term κατ' εἴδη ζητεῖν (630 E) is used once. and the rulers of the state are asked to be able matics to proceed from the indefinite many to the one which constitutes dialectical inquiry according to the earlier nomy are dialogues (965 B: ἐλέγομεν τὸν πρὸς ἕκαστα ἄκρον δημιουργόν propaeτε καὶ φύλακα μὴ μόνον δείν πρὸς τὰ πολλὰ βλέπειν δυνατὸν deutic as είναι, πρὸς δὲ τὸ ἐν ἐπείγεσθαι γνώναί τε καὶ γνόντα πρὸς ἐκεῖνο συντάξασθαι πάντα ξυνορώντα). The dialectical method is even clearly recommended as the best way to It consists in perceiving unity in the variety of Unity of appearances. This unity is the unity of notions, which notions here as in the dialectical dialogues are called ideas. Athenian philosopher rebukes his Doric friends for their of appearindifference, and this imagined indifference is the best

dependent on the Universal. the Unity of Virtue.

lectic, to which matheand astro-Republic.

explanation why Plato did not expound at length in the Laws his dialectical theories: 965 c: åρ' οὖν ἀκριβεστέρα σκέψις θέα τ' αν περί ότουοῦν ότφοῦν γίγνοιτο, ή τὸ προς μίαν ιδέαν έκ των πολλών και άνομοίων δυνατόν είναι βλέπειν; -- ἴσως -- οὐκ ἴσως, ἀλλ' ὄντως, ὡ δαιμόνιε, ταύτης οὐκ ἔστι σαφεστέρα μέθοδος ἀνθρώπων οὐδενί (cf. 638 Ε: ὀρθὴν μέθοδον δηλοῦν). Still it is evident that the same dialectical knowledge is here required from the rulers of the state as in the Republic. They should perceive the unity of beauty and of the good, and be able to prove it by reasoning (966 A: περὶ καλοῦ τε καὶ ἀγαθοῦ... τους φύλακας ήμεν γνωστέον . . . ὅπως ἕν τε καὶ ὅπη . . . Β: τί δ', ἐννοεῖν μέν, τὴν δὲ ἔνδειξιν τῷ λόγῳ ἀδυνατεῖν ἐνδείκυυσθαι;—καὶ πῶς; ἀνδραπόδου γάρ τινα σὰ λέγεις έξιν). Thus on every subject the rulers are supposed to have true knowledge, and to be able to explain it, to apply it in practice, and to judge about the results (966 B: meal πάντων των σπουδαίων ήμιν ο αὐτὸς λόγος, ὅτι δεῖ τοὺς ὄντως φύλακας έσομένους των νόμων όντως είδεναι τὰ περί την άλήθειαν αὐτῶν, καὶ λόγω τε ίκανοὺς έρμηνεύειν είναι καὶ τοῖς έργοις ξυνακολουθείν, κρίνοντας τά τε καλώς γιγνόμενα καὶ τὰ μη κατὰ φύσιν). These conditions show very clearly that the true rulers can be only philosophers or dialecticians, though Plato representing a conversation with untrained simple hearers did not lay a special stress upon the terms. At the end of the Laws he resumes the two chief points of his doctrine, the priority of the soul and the rule of reason in the universe (967 D). It is the aim of the philosopher to apply the whole of his general knowledge also to moral problems and to explain the reasons of everything reasonable (967 Ε: συνθεασάμενος χρήσηται προς τὰ τῶν ἡθῶν ἐπιτηδεύματα καὶ νόμιμα συναρμοττόντως, όσα τε λόγον έχει, τούτων δυνατός ή δούναι τον λόγον). Η who possesses knowledge is also bound to transmit it to others according to his best ability (730 E: 80a àya6á 715 κέκτηται δυνατά μή μόνον αὐτὸν έχειν άλλά καὶ ἄλλοις μεταδιδόναι καὶ τὸν μὲν μεταδιδόντα ώς ἀκρότατον χρη τιμάν).

Plato still maintains the rule of reason and the priority of soul.

In all parts of the Laws, and on every occasion, Plato exalts the power of reason in the universe and in human life: in these respects the Laws agrees perfectly with the Timaeus. Reason is the leading power for gods and men (631 D: τὰ μὲν ἀνθρώπινα εἰς τὰ θεῖα, τὰ δὲ θεῖα εἰς τὸν ήγεμόνα νοῦν ξύμπαντα βλέπειν), binds all virtues into one (632 c: πάντα ταῦτα ξυνδήσας ὁ νοῦς, cf. 963 A), rules over everything (875 D), has produced everything (890 D: vov γέ ἐστι γεννήματα κατὰ λόγον ὀρθόν), helps the soul in its movements (897 Β: ψυχή ... νοῦν ... προσλαβοῦσα αἰεὶ $\theta \epsilon \hat{i} o \nu \delta \rho \theta \hat{\omega} s \theta \hat{\epsilon} o \nu \sigma a$), and has ordered the universe (966 E: νοῦς τὸ πᾶν διακεκοσμηκώς). For readers who everywhere in Plato see the theory of ideas, this reason so often spoken of might mean an impersonal reason; but if we consider God and the exceeding importance of God and souls in the latest phase of Platonism, no possible doubt is left that vous is the reason which can exist only in a thinking soul. In a similar way ignorance is represented as the source of evil The worst ignorance leads to the prevalence of the lower activities of the soul (689 B), and its worst form of knowis ignorance which feigns to be wisdom (863 c: ayvoiav ledge. λέγων ἄν τις τῶν άμαρτημάτων αἰτίαν οὐκ ἂν ψεύδοιτο . . . διπλούν, όταν άμαθαίνη τις μη μόνον άγνοία ξυνεχόμενος, άλλα και δόξη σοφίας, ώς είδως παντελώς περί α μηδαμώς olde). To this belongs all the wrong learning which is dreaded by Plato as worse indeed than pure ignorance (819 Α: φοβουμαι . . . τους ημμένους . . . μαθημάτων, κακώς δ' ήμμένους · οὐδαμοῦ γὰρ δεινὸν οὐδὲ σφοδρὸν ἀπειρία τῶν πάντων οὐδὲ μέγιστον κακόν, άλλ' ή πολυπειρία καὶ πολυμαθία μετὰ κακής ἀγωγής γίγνεται πολύ τούτων μείζων ζημία).

Plato maintains his right here, as in the Politicus, Prolixity to judge for himself about the length of his explanations on any simple subject (642 A: σκοπῶ δή, μὴ δόξαν ὑμῖν παράσγωμαι περί σμικρού πολλά λέγειν . . . το δε ή κατά φύσιν αὐτοῦ διόρθωσις οὐκ αν δύναιτο ἄνευ μουσικής όρθότητός ποτε σαφές οὐδ' ίκανὸν ἐν τοῖς λόγοις ἀπολαβεῖν). If everything is truly known and explained, the length of

the Soul.

The worst ignorance is still conceit

defended, as in the Politicus. the explanation is easily recognised as corresponding to the importance of the subject (645 C: ἐναργεστέρου δ' αὐτοῦ γενομένου . . . καὶ τὸ περὶ τῆς ἐν τοῖς οἴνοις διατριβῆς, ὁ δοξασθείη μὲν ἂν εἶναι φαύλου πέρι μῆκος πολὺ λόγων περιττὸν εἰρημένον, φανείη δὲ τάχ' ἂν ἴσως τοῦ μήκους γ' αὐτῶν οὐκ ἀπάξιον).

Relation of Definition to name and thing.

The distinction between thing, name, and definition, brought forward as a logical instrument with the purpose of identifying the soul with the self-moving movement, is already known from earlier dialogues, but it leads here to a far-reaching generalisation. All possible questions appear to be reduced to only two kinds: either asking the name of a subject of which the definition is given, or asking the definition of a given name (895 D: ἀρ' οὐκ ἀν εθέλοις περὶ εκαστον τρία νοείν· εν μεν την οὐσίαν, εν δὲ της οὐσίας τὸν λόγον, ἐν δὲ τὸ ὄνομα καὶ δὴ καὶ ἐρωτήσεις είναι περί τὸ ον απαν δύο.—πως δύο;—τοτε μεν ήμων εκαστον τούνομα προτεινόμενον αὐτὸ τὸν λόγον ἀπαιτείν, τοτὲ δὲ τὸν λόγον αὐτὸν προτεινόμενον ἐρωτᾶν αὖ τοὕνομα). Those who know only names without being able to give definitions have no true knowledge of anything. Thus knowledge is here, as in the dialectical dialogues, based on definitions (964 A: cf. Soph. 218 c).

All
physical
qualities
are to be
explained
dynamically.

Among the allusions to scientific investigations one of the most remarkable is the reduction of all material appearances, including colours, temperatures, pressure, taste, to physical movements, which consist only of agglomeration and dispersion of atoms (here not expressly mentioned), analysis and synthesis of matter (897 A: κινήσεις σωμάτων ἄγουσι πάντα εἰς αὔξησιν καὶ Φθίσιν καὶ διάκρισιν καὶ σύγκρισιν καὶ τούτοις ἐπομένας θερμότητας, ψύξεις, βαρύτητας, κουφότητας, σκληρὸν καὶ μαλακόν, λευκὸν καὶ μέλαν, αὖστηρὸν καὶ γλυκύ). This audacious anticipation of modern views is one of Plato's many happy guesses, which produce on the impartial reader the strange impression of an unaccountable a priori knowledge of nature.

The breadth of view about the whole of Being is Concepshown also in repeated references to the great periods of tion time which have elapsed since the beginning of life on earth. Millions of states have existed, grown, and decayed, with many changes in their constitutions (676 BC: μυρίαι έπὶ μυρίαις ήμιν γεγόνασι πόλεις έν τούτω τώ γρόνω, κατά τον αὐτον δὲ τοῦ πλήθους λόγον οὐκ ἐλάττους ἐφθαρμέναι, πεπολιτευμέναι δ' αὖ πάσας πολιτείας πολλάκις έκασταχοῦ). Nothing is new, and everything must be sought and found again after it had been lost and forgotten (677 D: μυριάκις μύρια έτη διελάνθανεν τους τότε, χίλια δ' ἀφ' ου . . . καταφανη γέγονε). It is even doubted whether human life had any beginning, and this confirms our interpretation of the myth told in the Timaeus. The Athenian philosopher is speaking to people unaccustomed to the conception of an infinite past, and still he says clearly that the long periods referred to are only a symbol of the actual Eternity eternity of mankind (781 E : $\epsilon \tilde{v}$. . . $\chi \rho \dot{\eta}$ $\pi \acute{a} \nu \tau$ ' $\tilde{a} \nu \delta \rho a$ of Man. ξυννοείν, ως ή των ανθρώπων γένεσις ή το παράπαν αρχήν οὐδεμίαν εἴληχεν οὐδ' έξει ποτέ γε τελευτήν, 782 Α: άλλ' ἡν τε ἀεὶ καὶ ἔσται πάντως ἡ μηκός τι της ἀρχης ἀφ' οὖ γέγονεν άμήχανον αν χρόνον όσον γεγονός αν είη).

It forms a curious contrast to this enlarged horizon Athens is that in the Laws, as in the Timaeus and Critias, Athens praised is praised as it had never been since the death of Socrates (642 c: δσοι 'Αθηναίων είσιν άγαθοι διαφερόντως είσι τοιούτοι, δοκεῖ ἀληθέστατα λέγεσθαι). This reconciliation with the natal city may be explained by the success of the Academy of which we see some trace in the constant allusions to poetry the great importance of education (642 A, 644 A, 653 A C, 803 D, 965 A). But the old enmity against the poets remains unabated; they are submitted to a severe censure (816 E-817 c), and often ill-treated (890 A, 964 c, 967 c). Thus we see Plato remaining faithful to many of his most important doctrines up to his latest age. love of knowledge and science is not lessened by the circumstance that he devoted his latest years to a popular

as never before, but the old auarrel between and philosophy continues.

The highest reality is found in a hierarchy of Souls.

exposition of practicable political schemes. What he had discovered in earlier years,—the fixity of knowledge as opposed to the inconstancy of opinions,—remained for him a permanent truth. Only the ideas which were at first credited with a substantial existence out of the mind have been later enclosed in souls, and the hierarchy of souls became the highest reality, the last explanation of the problem of existence. These souls are free to fall or to rise according to their own will, and they have the power of becoming the source of evil. But a divine Providence leads those who trust their inspirations out of all troubles to a higher and better life, of which our life on earth is only a small and insignificant part. This latest form of Platonism comes remarkably near the views of later religions, and it is Plato's peculiar merit to have progressed so far by his perfected method of dialectical investigation.

Anticipation of modern religious belief.

CHAPTER X

PLATO'S LOGIC

WE have been obliged to include many psychological and metaphysical theories in our account of the origin and growth of Plato's logic, in order to illustrate the stages of his development and to confirm by every possible hint the conclusions about the chronology of his works built upon the study of his style. It is now our purpose to give a General general view of Plato's logic and its development, with- view of out special reference to texts or to chronological difficulties which have been sufficiently dealt with in the preceding chapters. Here we may also supplement our direct information on the subject by probable inferences as to some aspects of logical theory and practice which did not find a full expression in Plato's literary production. For this most certainly is one of the results of the above inquiry. Plato did not care to write all he knew, nor Plato were his works intended to be handbooks of any science. All of them, not excepting the Laws, had the character of academic programmes, dealing with some question in order to attract the reader's attention to more difficult problems, and referring for the solution of these to oral Much as has been said about the last page of teaching. the Phaedrus, and of the neglect of writing it seems to imply, this interesting passage has not been sufficiently compared with the concluding pages of the Laws, in which we find about thirty years later much the teaching same opinion. Nor is it difficult to point out many other not only passages in which oral teaching is recommended as the in the true teaching, as a serious occupation, contrasted with Phaedrus,

Socratic period of inductive definition.

literature as a pastime, a noble pastime, though it can never be so serious as the seed implanted in living souls by living intercourse with a living teacher.

This 'game' of writing was never despised by Plato, as some interpreters of the *Phaedrus* have wrongly inferred. In the Symposium (209 DE), in the Phaedrus (278 c), and in the Laws (858 c) Plato insists on the literary character of the work of the lawgiver, which he esteems as the noblest model of literary production. But literature has its limits, and is not comparable to life; life, not literature, is Plato's aim; the soul and its ideas, not words nor speeches, claim his highest attention. He wrote for those who could not hear him, and play with him at the laborious game described in the Parmenides; also for his pupils who had lived through some of the problems fixed by him in writing; but to the end he regarded his works as artistic reminiscences of a small part of his thoughts, and of some of the conversations held in the Academy. We have therefore no reason to suppose that any part of his philosophy has been fully expressed in his works, though we may look at these as sufficient evidence of his thought, enabling us to acquire a fair and probable conception of his theories.

In earlier days Logic seems not to have had much interest for him. His small dialogues and the *Protagoras* contain attempts at definition, and proceed generally by induction in a manner which, so far as our knowledge goes, does not differ from the mode of Socrates. Moral questions are chiefly discussed, without any special attention to logical difficulties, except perhaps the mention of a science of science in the *Charmides*, in which dialogue also the term συλλογισάμενος is applied to a formal syllogism of the form Cesare. This need not appear very startling even at an early stage of Plato's literary career. Inferences are older than Logic, and even the term for the process of inference is older than Plato. The absence of logical preoccupations is also manifest in the *Prota*-

goras, notwithstanding all the praise there bestowed upon knowledge and the incidental observation about the invalidity of the conversion of universal affirmative judgments. This is a sign rather of logical practice than of logical theory. Anybody who thinks consciously must notice that an universal affirmative judgment cannot undergo total conversion, or that it can be converted only into a particular affirmation. This is not yet a beginning of logic, just as the distinction of transparent and opaque bodies is not a beginning of optics.

The first start in Plato's logic is made in the Meno, Anticipaand it is a very remarkable beginning, because besides the lesson in generalisation at the opening, this dialogue contains a foreshadowing of Plato's latest thought: the foundation of our a priori knowledge on the supposition of a previous existence of each soul, and the highest axiom of the unity of the universe indicated as the source of the similarity of souls. Here also true opinion is repeatedly distinguished from knowledge as a different power, parallel to the distinction of substance and appearance. These are the Early great lines on which Plato progressed all his life, and genius their expression in the Meno is a strong confirmation of forecasts that psychological theory according to which youthful its latest genius foresees the chief results of its later labours. This psychological theory is here in so far confirmed, as Plato is supposed to have written the Meno at the age of thirty-three, certainly a very early age for a Greek writer. Those who in the name of the same theory attributed the Phaedrus to a youth of twenty-five seem to have been unaware of the great logical superiority of the Phaedrus over the Meno, which is evidently written after the death of Socrates, and probably after 395 B.C. (as is shown by the mention of Ismenias).

However important are the logical theories of the Meno, the method here followed still remains Socratic. It is by induction and experience that Plato attempts to prove the pre-existence of the soul, not by that logical

tion of Platonic theory in the Meno.

results.

Hypothetical reasoning a new thing. necessity which is so much employed in the Republic and later works. Also hypothetical reasoning, or the following out of the consequences of each hypothesis before its truth is decided, is here evidently introduced for the first time and is admittedly taken from mathematical experience, while at a later time it is constantly used as a very familiar method.

Euthydemus:
exposure
of current
Sophisms.
In the
Gorgias,
Socratic
ignorance
is changed
to ethical
certainty.

The practical and inductive character of the Meno is common to this dialogue with the Euthydemus; in which examples of Sophisms are quoted and refuted, without any attempt at a general discussion on the origin of error. The Gorgias insists on the permanence and consistency of true knowledge without attempting to go deeper into the question of its nature: still the ethical results of this dialogue are affirmed as knowledge with a certainty very much opposed to the earlier Socratic ignorance. It was natural that at this point of his philosophical development Plato should begin to consider with greater attention the question of method. He had arrived at the truth in individual ethics, and he saw that truth assailed by the vulgar eloquence of his opponents. In the Gorgias, despite his apparent condemnation of eloquence, he challenged eloquence and rhetoric in a somewhat rhetorical manner.

Cratylus: first logical dialogue. Relation of language to thought.

But he was already on the way to a new armoury for the conquest of truth, and we see in the Cratylus the first logical dialogue—the question debated being the relation of thought to language,—certainly a logical question. It is decided against the current identification of speech with thought, and this is a great victory of Plato not only over his contemporary adversaries, but over a natural and almost invincible tendency of the human mind to credit words with more importance than they deserve. The question raised in the Cratylus,—what is the true substance of things, as distinguished from their changing appearances?—is not definitively answered, but certain allusions make it probable that Plato had

Plato had already caught

already conceived the supremacy of ideas over the human glimpses mind and over the world of appearances. The transition from Socratic notions to Platonic ideas may have been effected in Plato's mind long before he represented it in It would therefore be useless to seek in his works a first mention or first exposition of the theory of ideas. Eternal unchangeable ideas independent of the Idea of human mind have arisen suddenly as a beautiful vision, and this vision he represented with masterly skill in the Symposium, where it is prepared by a scale of succeeding views of Love and Beauty. A more detailed account of the ideas is given in the Phaedo, a dialogue in which logical questions take almost an equal place with metaphysical investigation.

If we take the description of ideas literally, they appear to have been for Plato true substances, existing outside every consciousness. But this conception being very difficult to realise, it may be that Plato did not intend to convey it by his highly metaphorical language, and that he only endeavoured to illustrate the fixity the ideas and objectivity of ideas as contrasted with the in- true substability and subjectivity of appearances. Objectivity stances, does not require substantial existence: anything that by its logical nature must be universally admitted is an objective truth. The difference between this objectivity and the objectivity of substances may not yet have been fully realised by Plato, and in many passages of the Symposium and Phaedo, as well as of the Republic and tinguished Phaedrus, the ideas appear to exist outside the world and outside souls, forming a separate and more perfect universe of true Being, the model and the cause of the apparent universe of matter.

This period of Middle Platonism, during which the Middle Republic and Phaedrus were written, and to which also the two immediately preceding dialogues might be referred, shows in many details an increasing interest in logical studies. Hypothetical proceeding is supplemented

of the supremacy of ideas. Symposium: beauty selfexistent, and an object of blessed contemplation.

Phaedo: outside consciousness: objectivity not yet transcendental Being.

logical theory. Classification of notions. Knowledge and opinion. Consistency the test of truth.

New conception of δύναμις. a point of transition towards the new Criticism of Ideas.

The Highest Kinds, or Categories. No idea apart from a soul. Fresh interest in the material world. Becoming depends on movement, and the prime

Increasing by the careful classification of notions, and the aim of interest in science is stated to be the reduction of all truths to one highest principle. The difference between knowledge and opinion is explained by the difference of their objects: knowledge refers only to eternal ideas; opinion to changing appearances. The test of truth is consistency, and the universal relation of all parts of knowledge affords a mutual confirmation for each of them, all depending upon one central idea of the Good, or the final cause of the universe. Ideas, being inaccessible to the senses, are still very much clearer and more distinct to thought than material things to the senses. A truth only then deserves our full confidence, if it be above every sense illusion, and based on the intuition of pure ideas, which alone are the object of knowledge. Among the notions which acquire an increased importance in the period of the Republic the term δύναμις is the most important, as it leads to the later conception of selfmoving souls. In the Phaedrus this latter conception appears for the first time, and may be looked upon as the starting point of the logical reform initiated in the Theaetetus and Parmenides.

In these essentially critical dialogues logical categories as the highest kinds of notions are introduced and enumerated for the first time, while the ideas of the Good and of the Beautiful which played such a great part in Middle Platonism are less prominent. over, the existence of ideas outside conscious souls is completely abandoned, and the importance of soul as a first principle of movement is greater than in the period of Appearances remain illusory, but Middle Platonism. a certain reality of the material world is recognised in so far as all happening and all Becoming is reduced to movement, movement being either change of position in space or change of quality in a soul. This view of a real world acted upon by souls remains throughout the later Platonism. The old conception of substantial ideas is criticised in the Parmenides in a manner that may suggest mover is a doubt whether it had ever been maintained by Plato in the Soul. the crude form admitted by his interpreters.

With the Sophist our philosopher begins a dialectical The period during which the classification of notions is his Sophist, chief aim. The notion of being or substance now occupies Politicus, the first place, and is made the subject of very special Philebus. investigations. It is found that it applies to the soul generally or to souls in a higher degree than to anything Knowledge ceases to be a pure intuition, and becomes the product of thought as a co-ordinating agency. This activity of thought has produced the existing order in the material universe, and our individual thought is a reproduction of the more perfect divine thoughts. continuity of human science is based on our historical knowledge of the efforts of our predecessors. Classifi- Analysis cation and co-ordination, analysis and synthesis, are the and syntwo powerful instruments of inquiry. Soul and movement are the ultimate explanation of everything that happens.

Activity of thought.

These views, brought forward in the three dialectical dialogues (Sophist, Politicus, Philebus), are also maintained group: in the latest group of Timaeus, Critias, and Laws. system of latest Platonism is no longer a system of ideas, Laws. but a system of souls, of different and increasing perfection, from the lowest soul of a plant to the souls of stars which are termed gods. Above all rises the ruling soul of the of ideas, universe, the world's maker and ordainer, a divine Providence, which places each soul in the right place, and allots it its proper task in a series of successive lives extending over millions of years, probably without beginning and without end. Knowledge is acquired by each soul through its own exertions, increased by constant exercise and imparted by teaching. Ideas exist only in souls—they are eternal and unchangeable because their first model is created by God in his own thought. ideas are the patterns of reality, and their existence in

The latest Timaeus, Critias. Not now a system but a system of souls acting on the universe surrounding them. Supremacy of divine Providence, yet

free action of individual souls.

souls is named true Being. But they are not now suddenly perceived in ecstatic visions, as in the period of Middle Platonism. They must be created and elaborated by each soul in its own turn, and sought for by the logical exercises of classification, generalisation, and division.

Classificaralisation. and division. Dichotomy to be preferred. always followed. Natural types.

The logical rules given by Plato refer chiefly to these tion, gene- elementary operations. Each notion should be subdivided into as few parts as possible, and dichotomy according to the law of contradiction is always preferred. Sometimes a greater number of subdivisions is allowed, but we are asked to show what essential differences distinguish each part from all others. This is more specially applied to but nature the kinds of animals, or living beings, which extend from the vegetable kingdom to the Gods. We are warned against the error of selecting superficial marks for the distinction of kinds. Each kind of beings has by its nature and by God's design one really essential peculiarity which should be found and manifested. The exact defi-The essen- nition of notions is the chief condition of a consistent system of knowledge, and must be independent of the prejudice produced by the use of language. Thought precedes language, and speech is but an instrument of thought; true eloquence being the privilege of the thinker. this respect Plato's logic appears to be more independent of the traditional forms of language than the logic of Aristotle, while his range of investigation, if less minute, was scarcely less universal.

tial difference of each kind. True eloquence the privilege of the thinker.

Aristotle's debt to Plato.

Plato, unlike Aristotle, did not attempt to leave in his writings a full account of his teaching, and thus it is probable that his teaching included more logical rules than those enunciated in his works. We find in them a frequent use of syllogisms, and though this does not imply that he had brought the theory of syllogism to that precise form which it has taken in the works of Aristotle, there is a distinct progress in the form of reasoning from the Socratic dialogues up to the latest age of Plato. It would be a very interesting subject for a

Logical fallacies in Plato. special investigation to collect and compare the logical Plato's fallacies which are found very often in the earliest writings, while they are rare in the latest group. a special inquiry could not be included in the present work, as our chief aim was a representation of Plato's logic and theory of knowledge in their relation to some comprepsychological and metaphysical doctrines. We have seen that Plato altered his primitive idealism into a more comprehensive philosophy, recognising the soul and a definite number of souls as the chief active powers of existence.

This conclusion of latest Platonism is Plato's greatest Aristotle discovery, far more important in philosophy than his discovery of the fixity of ideas. It has been strangely overlooked by many readers of Plato, and first of all by Aristotle, whose authority gained a lasting ascendency on the opinion of Plato's other interpreters. We have seen that the philosopher's genius anticipated many discoveries of modern science, as for instance the identification of heat and light with movement, the existence of invisible organisms in the seminal fluid of animals, the periodic changes in the movements of stars, the reduction of all material changes to aggregation and dispersion (or, as it has been termed recently, to integration and differentiation), the distinction between atoms and molecules, the composition of each molecule of water out of two atoms of one gas and one atom of another, &c. The same wonderful power of intuitive knowledge he displayed also in reference to purely philosophical questions. He is the first idealist, and has given rise to a long succession of idealistic philosophers from his own time to that of Hegel. But in his Relation later stage of thought he anticipated that new course of philosophy which led Descartes two thousand years later to seek the origin of all knowledge in individual consciousness, and Kant to seek in the categories a priori forms of all appearances. How far Plato advanced on this road can easily be seen from the above survey of his theories. do not pretend to say that Descartes or Kant added nothing

early idealism grew afterwards into a hensive philosophy.

misread Plato. Plato's anticipations of modern science.

of Plato's views to the speculations of Descartes. Kant, and We Leibniz.

to Plato's views. But there are in Plato's latest works clear anticipations of the most important theories of Descartes and Kant, and also of Leibniz's view of Divine Providence.

Plato's
power of
thought
and of expression.
His exclusive devotion to
philosophy under
the most
favourable
conditions.

This need not appear surprising to serious seekers after Truth. Truth about Being, so far as it is attainable to man, must be essentially the same now as in Plato's times. Thinkers of his power are so exceedingly rare in the history of mankind that nobody among his successors can claim to be his peer. Power of thought and power of expressing thought were united in this great thinker and great writer to an extent which never has been again attained. Other great philosophers, such as Descartes and Leibniz, while they enjoyed the same personal independence as Plato, did not devote their lives so exclusively to philosophy. Those who spent their lives in study and teaching, as Kant or Hegel did, were deprived at the beginning of that material independence which is the indispensable condition for the full display of philosophical power. Thus even the greatest of our philosophers labour, as compared with Plato, under the constraint of a certain inevitable one-sidedness and personal limitation, from which Plato was free. He had all the highest conditions for making the most of his passage through earthly life. Of noble ancestry, he inherited a bodily strength and power enabling him to sustain the efforts necessary in order to acquire all the knowledge of his times and to increase it; he was not compelled in any way to struggle for material existence, being a wealthy citizen in the wealthiest city of his times; he was born after a generation which included some of the greatest poets of mankind, and had himself an exceptional poetical talent, which he reserved entirely for the purposes of his philosophical teaching. He did not live in isolation, like Descartes or Spinoza, nor in a whirl of worldly interests, like Leibniz, nor in humiliating dependence upon an absolute government, like Kant or Hegel.

freedom of speech and teaching was actually secured by the crime committed against Socrates, because the Athenians were not likely to repeat it after the reaction produced by the writings of Socrates' pupils, and because religious intolerance was on the decline. Amidst all these favourable conditions imagine a divine soul of the greatest power, disposing of all means in the fulfilment of a providential mission: that of showing for the first time the fixity of ideas and the infinite dignity of the human soul. What limits can be set to the intellectual progress of such a philosopher? He stands far above his great Unique teacher, far above his great pupil, alone in his incompar- philoable greatness, and his works are only a splendid remembrance of his living activity, the result of the least excellence serious of his endeavours. What amount of his influence was transmitted to his pupils from generation to generation we can only guess: but for us Plato's dialogues are unique as a literary and philosophical monument, and deserve the greatest attention of all who long for metaphysical Truth, who remain unsatisfied with the world of appearances and with the passing aims of material life.
